The firm formerly known as Bickford & Beatty, Van Wert, Ohio, has changed its name, Carl C. Beatty, traveling salesman for the Prussian stock and poultry foods, having purchased Mr. Bickford's interest. Mr. Beatty is in a position to carry on the business very successfully. He is a thorough fancier and a man who attends to business in detail, and is a man who is decidedly on the square and pleasant to meet. He aims to have his business relations pleasant and succeeds most beautifully. The Bickford & Beatty Rose and Single Comb Rhode Island Reds are heavy winners and one of the leading strains. They always win the lion's share in the hardest competition. Mr. Beatty mates up his pens in town, but raises his young stock on the farm, and one never sees a more healthy flock nor one more even in color. Mr. Beatty is a stickler for shape, especially for long backs. If he had his way he would build them like dashunds. Head points are of equal importance with him, and he culls painfully close. He has some of the finest cockerels in the country to sell, bred from his famous winners at Indianapolis last year and other bred like winners. At Indianapolis, 1912, he won on three

entries, 1st hen, 2d pullet and 4th pullet, and shape special; Detroit, 1912, 1st and 2d cock, 1st and 3d hen, 1st, 2d and 3d pullet, 2d cockerel; Mansfield, Ohio, State Show, Rose Combs, 1st and 2d cock, 1st and 4th cockerel, color and shape specials, S. C. Reds, 2d and 3d cockerels, 2d pen color special, special for winning most points of any exhibitor, all varieties competing, Bucyrus, S. C. Reds, 1st cock, 1st and 2d hen, 2d and 3d cockerel, 1st, 2d and 3d pullet, 1st pen, special for best display, special color male Prussian Bell shape and color, special S. C. 2d cock, 2d and 3d hen, 1st cockerel, 2d and 3d pullet, 1st pen, Sky Rocket leading route, special for best ten S. C. Reds in show, color special male; Lansing, Mich., R. C. Reds, 1st, 2d and 3d cock, 1st, 2d hen, 1st, 2d and 4th cockerel, 1st, 3d and 4th pullet, 1st pen, special shape and color male, ditto female, grand sweepstake prize for best display of any variety, Sky Rocket leading 1st pen in S. C. females. In this pen full sisters to Sky Rocket; Cleveland, Ohio, R. C. 1st, 3d

fumes. No possibility whatever of boiling the eggs or losing the entire hatch by allowing a lamp to go out.

Readers of this paper have undoubtedly noticed the advertisements of the Natural Hen Incubator from time to time, and as we have great faith in the patented device of Mr. Siems, we strongly suggest that it would be a very good idea, indeed, for all poultry raisers to read his intensely interesting catalog. The address of the Natural Hen Incubator Company is Station H, Dept. 4, Los Angeles, Cal.

#### CARVER'S QUEEN QUALITY REDS.

We take pleasure in submitting extracts from testimonials received by A. A. Carver, Seville, Ohio. He has hundreds of letters from not only satisfied customers but joyous ones. Mr. Carver is a man who is decidedly on the square all over and all the time, and aims to give his patrons a little more than their money's worth. He has been a breeder

Second S. C. R. I. Red cock, Chicago, December, 1912; also first Chicago cock, 1910. Owned by W. Etzensperger, Willoughby, Ohio.

cockerel, 1st, 3d hen, 2d 4th pullet, color special male, color and shape special on female Prussian Bell, a three-year-old hen, S. C. 2d cock, 2d hen, 1st pen, Skyrocket and sisters making the pen, Sky Rocket winning special for best cockerel in American class. Write for catalog.—H. H. Coburn.

#### SAVE FOUR-FIFTHS INCUBATOR COST.

The great results accomplished by the Natural Hen Incubator, which uses the actual hen, has caused a startling revolution in many sections of the poultry-raising country.

This device, which was patented several years ago by Mr. Siems, a German poultry specialist, costs but \$3 for a 200 egg size, yet its results are a great surprise to anyone who considers low cost with good results.

The Natural Hen Incubator keeps Mrs. Hen at work all the time, thus doing

away with lamps, oil, hot and deadly of Rose and Single Comb Reds for the past ten years and for the past three or four years adhering strictly to line breeding. He not only knows his birds collectively and individually, but can pick the winners when baby chicks. A party from Burlington, N. C. wrote: "Pair shipped by you received 1:30 p. m., were reshipped at 4 p. m. and came back today in good condition. On the road ten days. Won two firsts at show."

"Holyoke, Mass.—Dear Sir: I got 3d cockerel, but the pullet made up for him. She won 1st and color special. Some of the big breeders present said she was good enough for Boston."

"New Orleans, La., Dec. 3, 1912.—Dear Sir: I will let you know how I fared at the New Orleans Poultry Show. I won with both pullet and cockerel and had the honor of two cash prizes for the two best Reds shown. I thank you for your kind treatment."

A party from St. Louis, Mo., writes: "The \$100 pen arrived O. K. I am greatly

pleased with them." Another from Newell, W. Va., writes: "All the best judges in this section pronounce the cockerel I bought of you the best bird they have seen this year. I want another \$25 bird like him next year."

"Lewiston, Idaho—Last February you shipped me setting. Weather 20 below. Got six nice chicks, one cockerel and five pullets. Show season I won 2d cockerel without fitting; just picked him up and showed him."

E. F. P., Minnville, Ore., writes: "I was in Dallas, Tex., this week with the Reds I got from you. I won 1st and 3d pullet, 3d cockerel and 3d pen. The judge said the birds were perfect in shape."

"Appleton, Wis.—I just pulled off a 1st and 2d at our show, also a 2d at Sheboygan. Tucker judge. Chicks hatched from eggs purchased from you."

Mr. Carver can furnish these testimonials in full in his new circulars. Write him for prices.—H. H. Coburn.

#### A NEW POULTRY APPLIANCE.

The handsome silver cup was awarded at the Poultry Item Show in Atlantic City last summer to the Afton Farm Feed Mixer as the best new poultry appliance on exhibition. That the award was a well-deserved one will be recognized at once by every man who has used one of these popular and efficient mixers, whose use is rapidly becoming general on poultry plants, dairies and general farms where the most efficient feeding methods are in vogue.

Designed and manufactured by S. B. Twining, proprietor of the famous Afton Farm and a poultryman of wide experience, the Afton Farm Mixers involve

principles that not only make the mixing of feed a simple and certain operation, but improves the quality and palatability of the feed to a great extent. A feed mixer will make a little feed go a long way; it will make feed a relished and assimilated mixture, giving the best nutriment to stock; it will save two-thirds of the time and labor expended in hand mixing, and has many other uses on the farm, such as fertilizer and seed mixing.

Most owners of poultry plants say regarding a feed mixer, "Oh, I don't mix enough feed to pay for one." This is wrong. Suppose you mix only ten or twenty quarts a day. That amounts to several tons a year. The saving in time in mixing this amount by a mixer will more than pay for the machine. That is the way the progressive feeder looks at the purchase of a mixer.

Afton Farm Feed Mixers are made in many sizes, and special sizes to order. They are metal, will last a lifetime and are easy and simple to operate. There are mixers with hand power and mixers for power drive. A postal to the Yardley Manufacturing Company, Yardley, Pa., will bring a worth while booklet on feed mixing and mixers. Send for it—it will be worth money.

#### POULTRY PROFITS AND HOW TO REALIZE THEM.

There is probably no branch of farm science so persistently exploited today as the poultry industry.

The periodic press teems with editorial matter and advertisements picturing the golden profits to be gained by keeping

hens. Now and then we read of a great farm, stocked with thousands of choice birds, and a wonderful story telling how its owner is salting away thousands of dollars yearly—clear "velvet"—on a moderate cash investment.

Some people take all this publicity with a "grain of salt" and cry "fake." Others believe it and try and do the same themselves. Both classes jump at conclusions and make the common mistake which precipitate people usually arrive at.

These rosy pictures of golden profits in poultry culture are not "fakes." What has been described has been done, and will be done again, and right here is where the second class—the believers—make their mistake. Not in believing, but in thinking that they can jump right in and do the same thing themselves without stopping to learn how.

No common sense in that. The brightest person in the world can't keep hens—successfully—without knowing a few things about the hen business. For instance, he must get it thoroughly driven into his head that a hen uses—devotes to flesh and egg production—only as much of her ration as she digests. Stuffing a hen with rich food doesn't make eggs necessarily. But causing a hen to digest—to turn into flesh and egg-making elements—a large proportion of her food, does make eggs, and for the same reason that a boiler makes steam when coal is burned under it and not wasted by poor stoking.

There are many "do's" and "don't's" in the poultry business, but this, after all, is the chiefest: Keep your hen's digestive organs working up to their maximum capacity and you'll get plenty of eggs—

## AGAIN VICTORS

### SCRANTON'S S. C. RHODE ISLAND REDS

At **LOUISVILLE, KY.**, against the best REDS of the South, won 1, 2, 3, 4, 5 cockerel; 2, 3, 4, 5 cock; 2, 5 hen; 2, 4, 5 pullet; 1 and 2 old pen; 1 and 3 young pen. **\$75.00 Cup** for Best Display in show—114 points.

Remember they made the **GREATEST WIN** at **CHICAGO** last season that has ever been made in that show by one breeder of Reds—**FIVE FIRST PRIZES** and **ALL SPECIALS**, besides many minor prizes.

At Hagerstown, Md., in October they also made a remarkable record. These, with their **UNEQUALED** records of past years, stamp them as the **LEADING STRAIN** of Reds of the present day.

**Why do they win?** Because they have been carefully line bred for years and have established **BLOOD LINES** that will **REPRODUCE**. My matings this season are better than ever before. If you want to know more about them send for a catalogue of matings today. It will be mailed free.

**B. H. SCRANTON -- BOX 350 -- RISING SUN, INDIANA**

## ROSE COMB RHODE ISLAND REDS

### GREAT PITTSBURG SHOW STRUCK BY LIGHTNING

That is what Simmons & Crittenden's Reds did January 13 to 18, 1913, by winning 1st, 3d and 5th cock, 1st cockerel, 2d, 3d and 4th hen and 5th pullet. This being the occasion of the annual meet of the Rhode Island Red Club of America, and with Lester Tompkins as judge there was an unusually large class of Reds of the highest quality. In addition to the above we won shape and color special, a gold shield and \$25 in cash on our 1st prize cock, Grand Champion Red male of the show, there being 128 males of both combs competing for this prize. Also gold shield for best display of Rose Combs and \$25 cup offered by Rhode Island Red Club of America. Our Grand Champion Cock was talk of the show.

We have a fine lot of stock for sale from our Bean line, brothers and sisters to our winners. Let us have your order. We sell on approval. Don't forget to send for our catalogue. Eggs for hatching at very reasonable prices.

## DAY-OLD CHICKS

FIFTEEN VARIETIES  
FOR SPRING 1913...

### Incubator Capacity, Half Million Eggs Per Season

3,000 S. C. White Leghorn and 2,000 Barred Rock chicks per week, also Brown and Buff Leghorns, R. C. White Leghorns, S. C. Black Minorcas, White, Black and Buff Orpingtons, White and Columbian Wyandottes, S. C. and R. C. Rhode Island Reds and White Rocks. Utility and fancy stock from 9 cents to 50 cents each. Broiler chicks, \$30.00 per thousand. Outsiders of the largest experience have pronounced our plant the best and most scientifically equipped of any in the country. Our chicks are stronger than hen hatched, withstand shipment and live. 5,000 pure bred hens kept under ideal conditions, lay eggs for this immense plant. If you are looking for quality and vigor, send for our free catalogue and price list.

THE CO-OPERATIVE BREEDING & HATCHING CO. : BOX A, TIRO, OHIO

and Dr. Hess Poultry Pan-a-ce-a is the thing that does it.

Poultry Pan-a-ce-a is a tonic. It gives tone and strength to the digestive organs, and so causes the greater proportion of food to assimilate and go to egg production. Its use practically does away with food waste. It is as impossible for a hen getting Dr. Hess Poultry Pan-a-ce-a (a trifling dose is enough for several hens) to keep from laying as it is for the boiler to stay cold with a roaring fire under it.

The Hess-fed hen must lay, because the food she eats follows nature's law and nature's course, and forces the oviducts into steady action. Dr. Hess Poultry Pan-a-ce-a also helps toward growth and early maturity, and goes far to ward off the common diseases of poultry. In a word, Dr. Hess Poultry Pan-a-ce-a—fed in small daily doses in the soft feed—makes possible the actual realization of the pleasant pictures which are today winning so many new recruits for the poultry business. Try it yourself and see.

### A FRANK STATEMENT.

Jas. W. Bell, Editor, American Poultry Journal, Chicago, Ill.

Dear Sir—We wish to advise you that since we commenced advertising in the American Poultry Journal our business has increased 100 per cent and is steadily increasing, our December business running over 100 per cent greater than a year ago. Under the circumstances we decided to give more space to the American for the year 1913, which we gave to your representative, Mr. Coburn. We owe much to Mr. Coburn, for I do not believe we would have been with you now, thereby losing the increased business for us the past season. We would thank you to notify the readers of the American Poultry Journal that we are now prepared to ship eggs for hatching by parcel post to all parts of the United States in the finest ship safe made, and our matings this season are the best we ever owned. Our customers were winners of the blue ribbon in six different states the past month, and we know not how many did not report their winnings. We are not showing this season, as the demand for our show birds were so great that we decided to sell all we could spare instead of showing ourselves. We look for the greatest season of fancy poultry ever seen for the year 1913, as every indication points to it, such as increased interest and awakening everywhere. I have some interesting things to tell your readers about Rhode Island Reds some time when you can spare the valued space. Having been with the breed almost from its infancy, I think I have learned some interesting points in mating and handling this great breed—the greatest egg machine of them all. Fraternally,

A. A. Carver.

### THE FIRELESS BROODING OF CHICKS.

We desire to call the attention of our readers to the above heading, which is the title of the new book published by Harvey Brothers, of Johnstown, Pa., the manufacturers of the Nu-Rinkle fireless brooders. It certainly will be worth your while to secure a copy of this book. For years they have been laboring on the problem of raising the chicks, experimenting with all kinds of brooders, heated and otherwise; none met with their requirements, but they kept pegging away until they had invented and perfected a fireless brooder that they claim will raise 90 per cent of the chicks. Not only do they claim this but they stand ready at any time to prove it by raising the chicks in the brooder mentioned. We wish you to bear in mind that the Messrs. Harvey Brothers are not only manufacturers but that they raise hundreds of chicks each year in their brooders, demonstrating the fact that they can live up to every statement they make. It has been along the line of actual experience that the Nu-Rinkle brooder was brought to perfection, and each spring sees them busily engaged with more experiments, seeking to throw new light upon the problem of artificial brooding.

We feel sure that a careful consideration of any claims they may make will be of benefit to anyone that desires to raise the chicks.

They wish us to urge all our readers who contemplate ordering a brooder to do so as early as possible. The outlook is that many will be too late to secure a brooder unless they take the matter up at once. Better write today for their new book—it is free.

## GRAND CHAMPIONSHIP POULTRY FUTURITIES.

In connection with the great fair, Allentown Poultry Show, Allentown, Pa., September 23-26, 1913.

The newest, latest and best thing in poultry showing. Same chance for the little breeder as the big breeder.

First inaugurated and conducted by the above show. A great success in 1912 and will be bigger and better in 1913.

Futurity stakes opened to an enlarged list of breeders and varieties, as follows: Barred Plymouth Rocks, White Plymouth Rocks, Buff Plymouth Rocks, White Wyandottes, Silver Laced Wyandottes, Rhode Island Reds, White Leghorns, Buff Leghorns, Black Minorcas, Polish, Hamburgs, Houdans, Silver Campines, Cornish Indians, Game Bantams, Ornamental Bantams, Colored Indian Runners and White Indian Runners.

(Note—Where no variety is mentioned, all varieties compete. Where no comb is mentioned, all combs compete.)

Nominations or entries close April 1, 1913. But should be made as early as possible. Lists already open.

Nominations in all stakes, two dollars (\$2.00) each. Separate stakes for cockerels and for pullets.

New method of banding, absolutely guaranteeing that none but birds nominated compete.

The following rules to govern:

1. Only birds hatched after January 1, 1913, wearing the regulation seamless 1913 Futurity bands will be eligible.

2. Nominations close April 1, 1913, but may in some varieties, like Leghorns, Bantams, etc., at the discretion of the superintendent, be extended to May 1, 1913.

3. Nomination fee on each bird will be two dollars (\$2.00), payable when nomination is made. Two or more birds may be nominated by anyone.

4. Birds nominated for futurities need not necessarily compete for the regular poultry show prizes, or in the event of accident or failure to develop need not be shown at all. However, if they are to compete in the futurities or in the futurities and regular prizes both, they must pay besides on or before the date of closing of entries for the regular poultry show (about September 12) the regular Fair Poultry Show entry fee of \$1.00 each, thus guaranteeing a single, well-lighted and correctly grouped cage.

5. The winners in the different futurities to take the entire stake. For instance, the total stake in White Orpington cockerels last year was \$60.00 and this entire amount went to the winner. The winner shall have besides the right to claim and advertise "The Grand Championship Futurity Winner for the Year 1913" and shall be awarded a handsome ribbon specifically certifying to this effect.

6. No commission or percentage of any kind shall be retained by the Poultry Show, but the entire stake as made up of the nominations at \$2.00 each shall be paid the winner.

7. Five enameled, seamless bands will be furnished by the Poultry Show for every bird nominated, thus allowing a more definite selection at maturity. As an additional safeguard the specific band number must be stated in all cases at date of final entry (or about September 12) and only such birds whose band numbers have been registered can compete.

8. All nominated birds shall have posted on their coops special "Futurity"

coop cards, same to remain up the entire show.

9. The judging to be done by the respective judges, judging the regular classes of each of the varieties represented in the futurities.

10. To avoid errors and accidents birds raised out of bought eggs for hatching are eligible, but it is distinctly understood that all nominated birds are to be reared or raised by the competitor and cannot compete unless wearing the regulation seamless, enameled and registered Futurity band that must be slipped on the leg at from two to three months old.

11. The stake for cockerels and pullets in each variety or group of varieties will be kept separate, unless the stakes of either are below \$50, when they will be combined. And in case in any variety they should be insignificant, the privilege is reserved to cancel the stake.

12. As soon as possible after the entries have closed each competitor will receive notice as to the total amount in the stake he is interested in; all monies to be deposited in bank here, and checks to be mailed winners as soon after the show is over as possible.

13. All entries must be made on regular entry blanks and all checks payable to W. Theo. Wittman, Superintendent, Allentown, Pa.

These rules mean fair play and put every breeder on the same level. No one can go out and buy birds to show in these futurities. Do not make the mistake some made last year by failing to enter. The entry fees are small and the amounts and honor to be won very large.

OCULUM increases egg yield 20 per cent; a free trail; ad page 280.

## PERKINS' PARTRIDGE PLYMOUTH ROCKS

EGGS FOR HATCHING—20 PENS MATED FOR THE TRADE. 3 pens, \$40; 3 pens, \$50; 9 pens, \$102; 6 pens, \$5; range flock \$3 per setting.

## BARRY FARM WHITE LEGHORNS

### WE ARE NOW BOOKING ORDERS FOR

## DAY OLD CHICKS AND HATCHING EGGS

You can be sure of positive success with baby chicks from Barry Farm. We breed only from matured yearling and two-year-old hens. Our boxing methods insure safe delivery. Barry Farm White Leghorns are bred for heavy laying as well as for exhibition points. They are persistent layers, hence money-makers the year round. Write for circular.

**BARRY FARM, H. R. BARRY, Owner : Box 117 : FAR HILLS, N. J.**

## FELL'S FAMOUS WHITE WYANDOTTES

At the greatest of all shows, Madison Square Garden, New York, 1912-13, almost make a clean sweep, winning four out of a possible five first prizes in the finest quality class of White Wyandottes ever shown, they make the most remarkable record winning first cock, second hen, first and fifth cockerel, first and fourth pul, first pen in a class of 261, making eight birds under first ribbon. This is the most remarkable record ever made at a New York show. I have shown at New York three times and won a total of nine first prizes, or seventeen birds under first ribbon. They are the modern White Wyandotte of the day champions of all times as my records show, cannot be excelled in whiteness and type, stand out alone and above all others in their class. I have won fifty-four first prizes at thirteen shows the past five years, or an average of over four firsts at each show. At the greatest of Fall fairs, Allentown, my last two showings, I won special \$75 cup for best ten birds in whole show, both times, a record unequalled and goes down as White Wyandotte history with all my winnings. Prices are the most reasonable. Send for mating and price list. Mention American Poultry Journal when writing.

**A. J. Fell : Box J : West Point, Pennsylvania**

## NEUBERT'S TRIUMPH.

Our readers have doubtless noticed the advertising of R. F. Neubert, of Mankato, Minn. Mr. Neubert is proud to announce that he has perfected his 1913 incubator, which is named the "Triumph" and which he calls his masterpiece.

When you stop to think that Neubert has been making incubators and raising poultry for over nineteen years, it is worth while knowing all about the machine that is the result of all this experience.

In the nineteen years Mr. Neubert has been in business he has built up perhaps the largest incubator and brooder business in the Northwest and is still growing.

Mr. Neubert's new book is well worth reading, whether you have an incubator or not, whether you are planning to buy an incubator or not. We urge every reader to send a postal card now to R. F. Neubert, Box 760, Mankato, Minn., and Mr. Neubert will be glad to mail a copy of his Triumph Book by return mail.

## INCUBATOR THAT LEADS BY 18 POINTS.

Since incubators were first thought of there have been scores of different makes under various names built. Each has possessed some point or points of value, and any one of them will hatch some chicks.

But never before in the history of modern incubator construction has so much real hatching value been built into an incubator as can be found in the "Successful" machine, made by that old established firm, the Des Moines Incubator Company, of Des Moines, Ia. Their ad appears in this issue.

After over seventeen years of constantly increasing success in the same line, this firm is still located in the same town and on the same site where they started business. Their plant, however, has grown from a small shop to a manufacturing enterprise of imposing size.

And back of this growth is this fact: The Des Moines Incubator Company have constantly improved their product and the material put into it at a time when many others were cutting the corners in order to reduce the cost of manufacture.

Every change made in the "Successful" has been a change which meant increased results for the user. First grade California redwood, for example, now forms the inner casing of "Successful," and yellow pine the ceiling for the outer case. All corners of the machine are interlocked or dadoed. Thus material and workmanship equal that of a hand-made cabinet.

The motto of this firm might readily be expressed as "forgetting expense of manufacture, how can we make our incubators better and more profitable to the poultryman?" Beside the two big points mentioned above, they have incorporated sixteen other valuable items of construction which make the "Successful" unsurpassed in quality. All these eighteen points are fully illustrated and described on pages 16 and 17 of the new free catalog. On page 7 of the same catalog will be found the sure, clear proofs of the lead these incubators have taken over other machines by outhatching eight other makes of incubators.

The "Successful" brooders are also made of California redwood this year and are equipped with the same automatic heat regulator which has given such perfect service in the incubators.

At any rate, send for the big "Successful" poultry book, which is full of practical incubator, brooder and chicken facts and is absolutely free. For 10 cents the Des Moines Company will send you, with the free catalog, a booklet on "How to Raise Forty-eight Chicks Out of Fifty Hatched." Remember the name and address, Des Moines Incubator Company, Des Moines, Ia.

## THE MANKATO INCUBATOR.

We were quite surprised to receive an advertisement for publication in our paper which offered a genuine new Mankato incubator for \$4.95. We took the matter up with the Mankato Incubator Company and secured their catalog, and we are assured that this is a fact. They are actually placing a real hatcher on the market at this price. Of course the machine is not a large one. It holds fifty eggs easily, but it has everything on it and in it that an incubator should have.

The Mankato Incubator Company also makes a larger sized machine which they sell for \$8.25 and brooders at proportionately low prices. It will be worth while

## Rose Comb Black Minorcas

First cock, first hen, first cockerel, first pullet at St. Louis 1912; first cock and first hen on White and Fawn Indian Runner Ducks. J. S. BALES ROUTE 2, SPRINGFIELD, ILL.

## PRUDHOMME'S CAMPINES

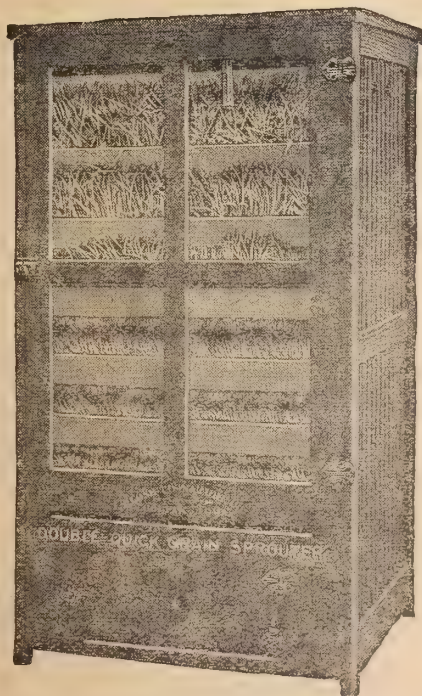

## Lead, Others Follow

Fellow fanciers, let me tell you about my Campines, birds or eggs prize winners at Hagerstown and Fredereck, Md., Allentown and York, Pa., at Baltimore, Philadelphia and New York. With eggs from my Campines I won 1st prize at Baltimore; 1st prize at Allentown in hot competition, 22 doz. in class, eggs from Anconas, Andalusians, Houdans, R. I. Reds, Langshans and other Campine eggs competing; won the SWEEPSTAKES at Frederick, Md. over eggs from all breeds entered. The early bird catches the worm, you know. Write me NOW, get in on this big Campine boom, you won't regret it.

Winners of 1,000 prizes and ribbons.

OAKLANDS POULTRY FARM  
R. F. D. 4 - TRENTON JUNCTION, N. J.SPROUTED OATS -- WINTER EGGS  
DAIRY SILAGE FOR MILK--SPROUTED OATS FOR EGGS

Hens, like cows, must be fed something green for best results.

For prolific egg production nothing excels sprouted oats.

Feeding sprouted oats is like turning the hens out in the spring on the young, tender grass—lots of eggs is the result.

For fertile eggs, feed the sprouted oats. Ninety per cent hatches have been made in February and March when breeders were regularly given rations of sprouted oats. The germinated wheat and rye make an excellent forcing feed for young chicks, as it is a partially digested food. To get great quantities of sprouted oats easily and quickly, and to germinate grains for the chicks, buy a

DOUBLE QUICK GRAIN SPROUTER  
THE PERPETUAL POULTRY SILO

A veritable Hot-House, Growth-Forcing Machine. Makes Two to Four Bushels of Feed from one of grain. Soon pay for itself in the feed it grows and the increased egg yield.

Sprouted in 24 hours and forces growth of 2 inches and more daily. The Double Quick is the original grain sprouter, now three years old, several thousand being in use in every part of the United States and Canada and is endorsed by hundreds of users.

Our catalog will give many letters like the following:

David Schwertner, Ottawa, Ohio, says: "Last fall I got one of your grain sprouters and used it last winter and had good results for the weather we had. It was zero weather nearly all the time, but my chickens laid from three to four dozen eggs right along and I can say the oats did it, for all the people around here didn't get any eggs last winter."

February 26, 1912: "I am enclosing my check for your No. 5 Double Quick Sprouter. Please ship by express. As soon as I have tested this one and find it satisfactory, as I expect I shall find it, I will give you an order for two more of your No. 5 Double Quick Sprouters. The one I bought some weeks since is doing good work."—C. H. Latham, Beauty and Utility Barred Rocks, Lancaster, Mass.

M. O. Richardson, Plattsburg, Mo., writes: "It is the greatest trick ever. It grows oats 10 inches high in six days. I am well pleased with it."

Made in six sizes—from a few hens to 1,000. Send for complete booklet on the grain sprouter and sprouted oats.

Close-To-Nature Co., 38 Front St., Colfax, Iowa

## LOUSY HENS DON'T PAY FOR THEIR KEEP

**KILL  
THEM**

One application of **Licene** will kill every louse on your birds and will keep them free from lice for six months. Read what Judge Henderson, one of the foremost Barred Rock breeders for the past fourteen years, says of Licene:

Gentlemen: I have used Licene on all my breeding pens and find that my birds are entirely free from lice. I most heartily recommend it, as it is the only preparation that I have ever used that has given complete satisfaction. Most sincerely yours, W. W. Henderson, 922 Security Bldg., St. Louis, Mo.

Price, 50 cents; enough for 200 birds; postpaid. Money refunded if you are not satisfied. **Sample free.**

**The Licene Co., Pontiac Building, Chicago, Illinois**

for every reader to write the Mankato Incubator Company, Box 821, Mankato, Minn., for their new catalog, which explains all the facts about the construction and results obtained with their machines.

### GET "BOB" ESSEX'S NEW 1913 CATALOG.

"Bob" Essex in his new 1913 catalog has once again shown his desire to help his friends the poultry keepers. The catalog is entitled "Making the Most From Poultry," that being the title also of one of the chapters in the book written by Mr. Essex himself. Other chapters are "Health and Disease in Poultry," "How Money Is Made From Standard-Breds," "When You Start, Start Right," "How to Get More Profit From Farm Hens." The book, of course, fully illustrates the "Essex Models"—America's largest line of incubators and brooders.

But the main attraction this year is the splendid collection of photographs of the latest styles of poultry houses (with measurements) in use at experiment stations all over the country. There are thirty of them, including those used in the egg-laying contests at Storrs, Conn., and at Mountain Grove, Mo.; also the equally well-known laying house at Orono, Me.

As an incubator manufacturer, however, Mr. Essex refers with pride to the record-breaking event recorded in his catalog, due to the good will of his customers, namely, the extraordinary fact that "if we except public institutions," as he says, "every single 1912 testimonial letter that is printed in the catalog came to us unasked for. It is a new record in the incubator business."

When we consider that last winter was the most severe we can remember, and that hatches were late and poor, and then think that the "Essex Models" were, nevertheless, hatching so splendidly as to cause their users to sit down and write about it, then we may say with confidence, "The 'Essex Models' have, indeed, proven themselves 'Incubators of Quality.'"

You should have this 1913 catalog of superior incubators, brooders and poultry supplies. You need it in your business. If you mention this paper you can get it free by writing to the Robert Essex Incubator Company, Buffalo, N. Y., or New York City.

The whole tenor of the book is quality.

### AT CHICAGO AND LOUISVILLE.

The Single Comb Black Orpingtons from the Blue Ribbon Poultry Farm, Columbus, Ind., won in a large class of good ones at Chicago in December, second cock, fourth and fifth hen, third cockerel, second and fourth pullet, — pens, the only exhibitor to win on cock, hen, cockerel, pullet and pen. At Louisville, Ky., Dec. 23-28, 1912, first, second, third and fourth cock, second and fourth hen, second and third cockerel, third and fourth pullet, first and second pen, silver cup for best display, given by E. Rogers, of Cincinnati, all Orpingtons competing, winning more points than all competitors, one large eastern breeder exhibiting. The Blue Ribbon Poultry Farm is the largest exclusive Single Comb Black Orpington Farm in the United States. A Blue Ribbon cockerel will help you out next show season. H. H. Coburn.

### OLD HONESTY HATCHERY.

Old Honesty Hatchery, New Washington, Ohio, could not have been more aptly named. Mr. G. H. Kichline, its proprietor, is the very soul of honor, and one of the most painfully honest men in the poultry business. But conscientiousness is not his only accomplishment. He is a musician of some note and has trained his children to play various instruments, and the Kichline band is very entertaining. Last October we had the pleasure of being shown through the Old Honesty Hatchery by Mr. Kichline, who makes all of his large machines. Upon entering this hatchery, one is impressed by its sanitary conditions and the sweet, wholesome odor of pure fresh air. So perfect is the system of ventilation that there is not a suggestion of any disagreeable odors. This hatchery has three divisions—one 20x50 feet, one 20x33 ft. and one 10x21 feet and has a capacity of 20,000 eggs. Last year there were 100,000 chicks shipped to every nook and corner of our country and Mr. Kichline has hundreds and hundreds of testimonials from satisfied customers. He begins hatching in January and keeps it up almost the entire year. Orders have to be placed early. After the first of August orders can be filled with a

## THE HEART

of your incubator and brooder is the LAMP. AN UNRELIABLE LAMP JEOPARDIZES YOUR SUCCESS FOR THE SEASON. Far better to THROW AWAY the doubtful lamp and SEND AT ONCE for the ZERO SAFETY LAMP. The only lamp that is cooled by a column of air around the oil tank. Eliminates the danger of explosion and gives an intense and sure heat. Can be fitted to nearly every incubator and brooder made. You'll never regret having a ZERO SAFETY LAMP. From any of our dealers or by mail, \$1.25 postpaid.

The Sanitary Chick Fountain is the most sensible made. No chance for the chicks to drown. Easily filled and cleaned. Goes into any brooder. Holds one quart. Thousands sold every season. Price 25 cents, or delivered to you for 35 cents.

This is the neatest device ever invented for feeding young chicks. They cannot get into it or stand on it. Top removes easily to clean or fill and springs back into place. Keep the food CLEAN. Just the right size for your brooder (ten inches long and four inches wide). Price 25 cents or delivered to you for 35 cents. Send for catalogue.

three weeks' notice. Mr. Kichline has been hatching for the past nine years and knows how to hatch good, strong, vigorous chicks that live to be both a pleasure and a profit to the purchasers, as well as winning many ribbons in the show room in all parts of the country. Mr. Kichline has ten acres devoted to poultry and has a very progressive and up-to-date little poultry farm. He also looks after seven flocks on farms, and the fact that the chicks are hatched right, raised right and handled right is one of the secrets of their great vitality. Mr. Kichline is one busy man, and has to be almost omnipresent, superintending his several interests, but he is always pleasant and happy, which, of course, lightens labor. Besides the Old Honesty Hatchery and poultry farm, Mr. Kichline owns his own building for manufacturing purposes. He ships the chicks so they arrive; seldom any deaths, no matter what season, nor what distance they are shipped, nor in what latitude or climate they arrive in. Old Honesty Hatchery can furnish baby chicks from the following varieties: Single and Rose Comb

Brown Leghorns, Single Comb Brown Leghorns, Single Comb Buff Leghorns, Rose Comb Buff Leghorns, Rose Comb Rhode Island Reds, Single and Rose Comb Black Minorcas, Barred Buff and White Plymouth Rocks, White Wyandottes, Mottled Anconas.  
H. H. Coburn.

### 20TH CENTURY HATCHERY.

Blum & Co. are proprietors of the 20th Century Hatchery, Chatfield, Ohio. This firm is rapidly coming to the front in the baby chick industry. The buildings are 22x75 and 43x24 feet, with a capacity of 40,000 eggs. Last year this firm shipped over 100,000 chicks and will ship three times that number this year. The breeding pens are of choice stock and are kept on farms in the vicinity of Chatfield, only one breed on a farm, ensuring purity, and healthy, vigorous chicks, that travel all over this United States and live; many which win at shows, in all parts of the country. People are learning that the least expensive and surest, as well as shortest

way to get a good start in standard bred poultry is by the baby chick route. So this industry is growing so rapidly that it bids fair to be one of the greatest branches of the poultry business. The 20th Century Hatchery packs and ships baby chicks in such a manner as meet with practically no loss. They fill orders carefully and promptly and a purchaser always gets the variety ordered. This hatchery can furnish chicks from ten leading varieties, and will be in shape to ship Single Comb White Leghorns in large numbers this year. Write for catalog and prices, and address the 20th Century Hatchery, Chatfield, Ohio.  
H. H. Coburn.

### A SEASON'S RECORD.

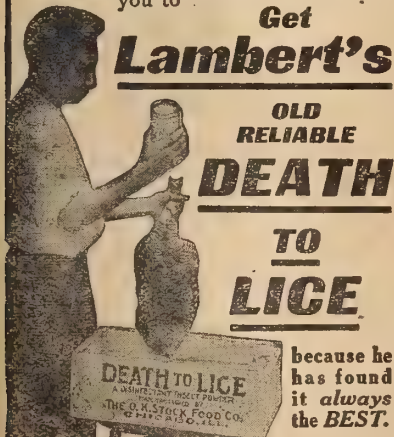

William Cook & Sons, originators of all the Orpingtons, of Scotch Plains, N. J., have had a very successful show season, and we are pleased to give some of their winnings. In S. C. Buff Orpingtons they have won this season first cockerel, Madison Square; first hen, first pullet and first pen at Memphis, Tenn.; first pen, second and third cockerels at Allentown, Pa.; first cockerel at Trenton; first and second cockerels, first hen, first pullet and first pen at Shreveport, La.; first and second cockerels, first cock, first pullet and first pen, Savannah, Ga.; first and second cockerels, first pen at St. Louis, Mo.; first pen at Plainfield, N. J.; at Birmingham, Ala., at the N. S. C. Buff Orpington Club show, first and second cockerels, first pullet, first pen, second cock and second hen, winning seven cups on Buff Orpingtons alone; at Louisville, Ky., first and third cockerels; at Atlanta, Ga., first and second cockerels, first pullet, second pen; at Norfolk, Va., first cockerel. Their winnings in S. C. White Orpingtons were: First pen at Atlantic City; first cockerel, Memphis, Tenn.; second cockerel at Allentown, Pa.; first cock and first cockerel at Trenton; first cock, first pen and second cockerel at Birmingham, Ala.; first and second cockerels at Shreveport, La.; first and second second cockerels, second pen at Savannah, Ga.; first cockerel at St. Louis, Mo.; first cockerel at Plainfield; first and second cockerel, Elizabeth, N. J.; second cockerel, Grand Central Palace; first and second cockerels, first cock and second pen at Louisville, Ky.; first and third cockerels, first cock at Columbus; first and second cockerels, second pen at Atlanta, Ga.; first and second cockerels, Norfolk, Va. Their winnings in S. C. Black Orpingtons were: First pen, Atlantic City; first cock, first pen, second cockerel and second pullet at Memphis, Tenn.; first pullet, second pen, second cockerel at Allentown, Pa.; first hen, Birmingham; second cockerel and pen, first and second cockerels, first cock, first pen, first pullet at Shreveport, La.; first pullet, first pen, second cock at Savannah, Ga.; first and second cockerels, first cock, first pen, first hen, second pullet at St. Louis, Mo.; first cockerel, Plainfield; first

## Knocks 'Em Stiff in a Jiff

There isn't a ghost of a show for lice and mites on hens, chicks or nests after a dust with the old reliable Lambert's Death to Lice. It knocks 'em stiff in a jiff. As one of the big successful poultrymen wrote us, "It is impossible to get along without your louse killer," so it is with every user. There's nothing so efficient.

## Don't Experiment

Follow the example of the leaders—ask any successful poultryman which lice killer has been the standard for 30 years—which is acknowledged BEST. He will tell you to

because he has found it **always** the **BEST**.

Don't expect to make your hens pay and permit lice to worry and annoy them. The lice will get the profit and often the hens and chicks, too. A few cents invested in Death to Lice will bring dollars in profit. Just the thing for layers, sitters, and exhibition stock. Will not injure eggs, chicks or hens or soil plumage. Get a 5 oz., 10c box at dealers to try (or send to us direct if he can't supply you). Other sizes 25c, 50c and \$1.00. Lambert's Latest copy of "POCKET BOOK OF POINTERS," a valuable book for poultry raisers. Mailed for 2c stamp.

## DUSTON'S White Wyandottes WIN, BREED WINNERS

Eggs sold produce winners  
and prove great layers

La., Nov. 6, 1912.

Dear Sir:

The young man captured first prize in his class and was against a strong entry. He is very fine and we are well pleased with him. One of your state had several entries. Wyandotte ckl. included, and took second to our bird. Our bird was much the better bird, being way ahead of the bird which would not have captured even second had it not been for his plumage, etc.

Ont., Dec. 11, 1912.

Dear Sir:

I am pleased to inform you I have had great success with your stock, winning in strong competition 7 1sts, 5 2nds, 5 3rds, 4 4ths and 1 5th and 4 cups for best collection, this year. There is no doubt you can supply the stock to beat any you can get, etc.

Ind., Nov. 28, 1912.

Dear Sir:

Received the pullets O. K. I am perfectly pleased with them and thank you much for the excellent selection you made for me. They are much nearer to standard requirements than any pullets I ever saw and I have certainly seen a few, etc.

S. C., Nov. 30, 1912.

Dear Mr. Duston:

I was down to the Show Thursday. I won there 1st Cock, 1st, 3rd Hen, 1st Ckl., 1st 2nd pullet; and 2nd Pen. Won gold special for best exhibit of Wyandottes all varieties competing. Wouldn't give my 2nd pen for the 1st for \$25.00 difference.

Wis., Dec. 7, 1912.

Dear Sir:

Perhaps it will interest you to hear what I have done with the ckl. and 8 pullets I purchased from you early this year. We are having our show this week and again had Judge Tucker. I won 1st, 2nd, 3rd pullet and 1st, 2nd, 4th ckl. Cock and hens in moult so could not show, etc., etc.

These are all features you want and need in your flock. I can sell you sure winners, fine singles or mate up sure breeders. Have many fine yearling cocks for sale reasonable. Send 15c for catalog. Remember it's a pleasure to quote prices. Mating list ready.

**ARTHUR G. DUSTON**  
Box 1020 So. Framingham, Mass.

cockerel, Elizabeth, N. J.; first cockerel, Grand Central Palace, New York; first cockerel at Norfolk, Va. They still have several more shows to exhibit at. Besides these winnings they won first at every show in Blue Orpingtons, and also Diamond Jubilee Orpington pens where they exhibited. These winners will be in their best egg pens. All these winnings were made with different birds, they using a different team for every show. This insures fertile eggs from their winners. It will be to your advantage to write for their Mating List, which is now ready. The prices of their best eggs from their winners is \$20 a setting.

Wm. Cook & Sons have won cup for best display of Orpingtons at every show they have exhibited at this season.

#### SUNSWICK'S RECORD FOR 1912-13.

Beginning at the Allentown (Pa.) Show in September, 1912, we have made a great record for a specialty plant of S. C. Buff Orpingtons, and we now stand ready to supply hatching eggs and baby chicks, all bred from the following line bred Sunswick stock.

To return to the great Allentown Poultry Show, we captured second Buff cock, first Buff hen, first Buff cockerel and second pen, this in one of the keenest com-

petitions that it has ever been our pleasure to meet at an early fall show.

Next in line came Augusta, Ga., and that was a gay lot of birds—stiff competition and a grand class of Orpingtons to run up against. Both the imported and home-bred birds were there, standing on equal grounds till the judging. Then we won second and fifth cock, first cockerel, second and third hens, and for the second consecutive season silver cup for the best Buff Orpington cockerel.

It is needless to tell you of the keen competition at the Chicago Show in December, and there we carried no less than four first prizes on our Buff Orpingtons, Ducks and S. C. Orpingtons. Our first and third Buff hens were the occasion of much particular comment and admiration, and we were awarded champion sweepstakes special on this first grand hen, who is truly a perfect specimen of her kind.

At Baltimore, Md., in January we made our final winnings for the season and out of eleven entries won nine prizes—fourth Buff cock; first, third and fifth Buff hens; first, second and fourth Buff cockerels, and second pen, also gold special for best two males and four females in the show. This year Baltimore was a duplicate in competition to the usual show at the Garden in New York, even as far

as the judge, so needless to say the class was a good one and the awards to be relied upon.

We have grand breeding stock and hundreds of high-class utility birds, and our special facilities as a Buff Orpington specialty plant will enable us to fill large orders for splendid baby chicks bred from any or all of the above season's winners and those of seasons past, together with their descendants.

Send us your orders—we will fill them, having your best interests in view. Sunswick Poultry Farm, Rufus Delafield, owner, South Plainfield, N. J.

#### IOWANA FARMS—IOWA'S GREATEST POULTRY AND STOCK FARM.

[Editorial Note—The illustrations referred in this article will be found on page 259 of this issue.]

Iowana Farms is beautifully located on an elevated plateau, from which one gets a wonderful view of the surrounding country. On the Mississippi, seven miles above Davenport, an interurban line, with station and switch, affording easy transportation facilities, the location is ideal in every respect for either a poultry or stock farm. It was with a wise idea of its future developments that this ideal location was selected. The situation of the buildings was carefully planned with view to the landscape effect and the result is very pleasing indeed.

Designed by the owner, Col. G. Watson French, to demonstrate the desirability of stocking the farms of Iowa with pure bred stock only, neither time, trouble, nor expense, if practical, was spared at any point in building up this wonderful model stock farm, of which every resident of the state of Iowa has a right to feel justly proud. The writer, during the past seven years has visited many similar farms and the Iowana Farms is as elaborately and thoroughly equipped with buildings and every necessary convenience, in labor-saving devices, for both a stock and poultry farm as it has been our pleasure to see.

The farm embraces about 400 acres of fine fertile soil, all under fence, divided into convenient fields, for the raising of crops, pasture fields for the Holstein cattle, colony yard system for the Berkshire hogs, and on the slopes at one corner of the farm, some 20 acres of orchard where are located the colony coops and ranges for the White Orpingtons. Nearly 100 acres has been devoted to the raising of alfalfa, proven, by this farm, to be one of the most profitable crops for feeding to all their stock. Corn raised on this farm is second to none, a supply being always kept on hand so that only well seasoned feed of the choicest quality is fed to the poultry.

The buildings of the poultry department are located at the east end of the main line of buildings, all facing slightly east of south. The laying house in the first line, fronting on 1,000 feet of lawn expanse, with winter yards both front and rear. Some 200 feet behind the laying house is the brooder house and administration building. This latter building, in course of construction, contains a new sub-basement incubator cellar, connected to the brooder house by a wide passage way, making transfer of chicks from incubator to hover easy and safe. On the second floor are the washing, drying and conditioning rooms and the offices of Dr. Bryant Smith, manager of the Iowana Farms poultry department. To the north of these buildings is the 20-pen breeding house, and in the fourth line eight large Monitor type colony houses for wintering the surplus stock or as special breeding pens.

In the administration building are bins for storage of feed, killing and refrigerator room, feed mixing, bone cutting, and it is equipped with hot and cold water and an electric motor for driving the machinery. Every drinking fountain is thoroughly sterilized and this is only one of the many wise precautions against any epidemic. This is enforced in every department.

Incubators are used extensively, although Dr. Smith delights in letting his hens have their own sweet way, so that a large part of the Iowana Farms' S. C. White Orpingtons are hatched and reared by trusty mother hens. The chicks, incubator hatched, are reared in the brooder house shown in illustration No. 1. The hovers are the continuous pipe design and have given splendid satisfaction. After the chicks are old enough to be taken from the brooders—depending largely upon the season—they are taken to the orchard, where they are raised on the colony house plan as shown by figure 3, and as soon as sex is distinguished they are again separated into flocks according to sex and age. All yards are piped with a water supply so

# BROODER STOVE

## Get a SIMPLEX Brooder Stove

### Now and Make Money This Season

Why continue out of date and inefficient brooding methods when a brooder stove will save you so much?

**The Simplex costs one-fifth as much as brooders.**

**You can run it in almost any room.**

**Requires less than one-tenth the time and work.**

You save the frightful mortality of the old-style brooders. With the Simplex Brooder Stove you can really raise the young chicks. Don't think it is an untried experiment. Send to us for the evidence of success of this method. Let us show you how to do away with smoky and unreliable lamps and costly, cumbersome heaters and pipes. Don't fuss with the daily cleaning of small brooders or have any more smothered chicks.

The Simplex Brooder Stove is placed in the center of a room. It burns cheap, low-grade kerosene in direct contact burner. A simple, positive regulator keeps the temperature at 90 degrees automatically so that at a certain distance from the stove the chicks instinctively find just the temperature they want. They form a circle at that distance with their backs to the heat when they sleep. They scratch and eat in about that belt of heat by day. They grow up happy and contented, strong and healthy, because the conditions are now nearly like those of Nature. You can go to bed happily, too, and sleep all night, knowing that the Simplex is faithfully mothering your chicks. It won't go out. It won't smoke.

We want you to know more about the Simplex method and will gladly send our catalog free without obligation of any kind on your part. Will you write for a copy today? Better just spend a penny for a postcard to see if you can make more money our way. Better do it now so you can order a stove quick if you decide to change.

**SIMPLEX BROODER STOVE CO. -1- 115 Fourth Street -2- GRAND RAPIDS, MICH.**

that all fowls have an abundance of good pure well water at all times.

We noted a special arrangement that has proven highly satisfactory, shown in figure 2. These are the cock paddocks, where all the breeding males are kept after the breeding season—the illustration conveys the idea splendidly—each paddock confines one bird—they are 3x35 feet, each equipped with a roosting department with a sunny dust bath below, a feed hopper and drinking fountain and a grass and clover run 3x40 feet. In the neighborhood of 100 cock birds can be comfortably housed in this manner. All promising cockerels not sold are carried over in this manner, so that plenty of the breeding males are always on hand.

As we said before, no expense has been spared in the buildings and this is practically true about the poultry buildings and the poultry equipment. At the same time, while the buildings are of the most substantial material, no money has been wasted on filigree or ornamentation. The main poultry house is 140 feet long, divided by solid partitions into pens 20 feet deep, having open front construction with glass windows that are closed only in severe weather. Each opening is covered with wire netting and drop canvas curtains which are generally all that is required. The interior of this building is all lath and plaster and all the woodwork is painted white. Water is provided for each pen from a general water system which distributes water practically all over the farm and each pen is provided with a sanitary drinking fountain. The farm is also provided with an extensive lighting system and the poultry houses are equipped so that each pen may be lighted by simply throwing on the switch. A mounted carrier conveys the worn out litter outside the building to cement pits and every precaution has been taken in advance to prevent any disease ever getting into the flocks. The sanitary conditions are as perfect as it is possible to make them in the poultry buildings as well as in the stock barns.

The fundamental idea with Iowana Farms in all departments is health, practicability, stamina, vigor, and ability to reproduce. Any animal that is a weakling in any respect is not tolerated for one minute at Iowana Farms and a very high standard indeed has been set for every specimen used for breeding purposes. This is true in the poultry department as well as among the other stock.

After due consideration, the breed decided upon was Single Comb White Orpingtons, and the original foundation stock consisted of an exceptionally fine pen of Kellerstrass. Later Dr. Smith, after having personally visited many of the largest and best breeders, personally selected such other birds as he desired, no money being spared in securing the best stock obtainable.

The writer's first visit to Iowana Farms was over one and one-half years ago and although they had a large flock, considered good quality at that time, Dr. Smith then informed me that they were not yet ready to advertise or offer their stock for sale, as they first intended to thoroughly establish their bloodline and determine the quality produced by their breeding specimens before offering to sell any of their product to the public. We find that all pens are carefully trapnested and a close record kept so that they could easily determine where every quality stock was coming from. It is easy for the reader to see that when the best stock in the country is procured as the foundation breeding stock, and when carefully mated by experts who understand the hereditary breeding qualities of stock and fowls and when the sanitary conditions are absolutely perfect, no labor or expense is spared in producing the very highest quality and vigor always being uppermost, that under such ideal conditions as these, stock is bound to be produced with exceptionally constitutional vigor. Naturally, show birds and breeding stock of remarkable exhibition and breeding qualities are the result.

Therefore, it is no surprise to us to learn that when Iowana Farms did exhibit at four shows this season, they can win twenty-nine ribbons, two cups and special at Chicago for 2d best two pens by one exhibitor.

#### LICENE KILLS THE LICE.

Winners—1911—of First and Third Cockerels at Madison Square Garden, and First and Third Cockerels at Boston.

Winners of seven of the sixteen ribbons in the Cockerel Classes at Madison Square Garden the last three years.

Winners of First Pen at Boston five of the last six years.  
For red-hot Tabasco Reds address,

Old Acres :- Foxboro, Massachusetts

## BARRED PLYMOUTH ROCKS

### Madison Square Garden New York Winners

First Prize Hen and Second Prize Pullet was won by my birds, shown by me at the Great M. S. Garden, New York, Show, 1913. Birds of my breeding have also won at Philadelphia, Hagerstown, etc., this season and in years past. But this New York win stamps them among the leading and best lines of the world.

### Exhibition Females My Specialty

My First Prize Pullet Bred Cockerels at Philadelphia and at Hagerstown were the sensation of the Barred Rock Class, in shape and line barring with the richest of color and best of breeding quality. Both are in same line as my First Prize Hens at New York and Philadelphia. I now offer a few females and several

### Breeding Cockerels For Sale

Of the same line breeding at special prices while they last. Write me now. Cockerels at \$5 for quick sales. Some selected ones of special merit for \$7.50 and \$10. They are worth double that to any one who wishes to breed high class females. Pullets of my breeding have won first and second at the great Philadelphia show and at others as well. I assure absolute satisfaction to all. Write me.

C. N. MYERS : BOX A : HANOVER, PENNSYLVANIA

# Tompkins' Rhode Island Reds Both Combs

Better now than ever before. Hundreds of high-class breeding birds at reasonable prices. Write us before ordering elsewhere. Eggs from high class pens.

Concord Poultry Yards, Harold Tompkins, Prop., Concord, Mass.

## C. E. RILEY'S R. C. REDS

International Champions at Buffalo, 1913. In a great class of superior quality my birds won Special Champion Prizes in both male and female. The Mayor's Cup, the Breeders' Cup, etc. Cocks 1-4, hens 2-5, cockerels 1-3, pullets 1, pen 2. First display, etc. At Rochester, N. Y., 1913, cocks 2 and 3, hens 1 and 2, cockerels 1 and 2, pullet 5 and first pen \$25. Cup for most points won by any Red breeder, etc. A few cracker jack cockerels for sale. Eggs, \$5 per setting. For further information write me. Personal attention given.

C. E. RILEY :: :: 431 FARGO STREET :: :: BUFFALO, N. Y.

## ALT'S S. C. REDS

Sensational winners Buffalo International, 1913. For three consecutive years they have been the leading winners at the great International Exhibit at Buffalo, N. Y. This year they won cock 4, hen 1, cockerel 1, pullet 1-3, pen 1-2; both shape and color specials, etc. My first prize cockerel was pronounced a wonder in type and richness of color. Stock for sale of superior merit. Trios and pens mated for results. Eggs for hatching. Write me your wants. Satisfaction assured.

H. W. ALT :: 87 FULLER STREET :: BUFFALO, N. Y.

## BUFF ORPINGTONS, BLACK MINORCAS

Now as the hatching season is beginning and you surely want to buy the best stock that you can get for the money, we will quote you a few of our winnings in four state fairs in competition with the large Eastern breeders.

In the S. C. Buff Orpington Class—At the Nashville State Fair we won: 1st hen; 2nd cock; 2nd pullet; 3rd and 4th cockerel; 3rd and 5th pen; 5th cock. Also a special premium on the hen for being the best in the fair. At the Alabama State Fair we won: 1st cockerel; 2nd cock; 2nd hen and 2nd pullet. At the Mississippi State Fair, one of the largest ever held in Jackson: 1st cock; 1st hen; 1st and 3rd cockerel. At the Louisiana State Fair we won: 2nd cock; 3rd hen; 3rd cockerel.

We have the nicest lot of S. C. Black Orpingtons which were not exhibited, this year.

In the S. C. Black Minorca Class—At the Alabama State Fair we won: 1st, 2nd and 4th cockerel; 1st, 2nd, 3rd, 4th and 5th pullet; 1st and 2nd cock; 2nd, 3rd and 4th hen; 1st and 2nd pen. Also a premium for best display of Aseatics. At the Mississippi State Fair we won: 1st, 2nd and 3rd cockerel; 2nd and 4th pullet; 2nd hen; 3rd cock, and 1st pen. Louisiana State Fair: 1st and 2nd cock; 1st, 2nd and 3rd cockerel; 1st, 2nd, 4th and 5th pullet; 2nd hen; 1st and 2nd pens.

This should be evidence that we have stock or eggs that you are looking for. We have the largest and best equipped poultry farm in the South. You do not have to go East for eggs for hatching season, taking chances on the climate where you can get them just as good for possibly less money. All our stock are free range. They are up to the standard in weight, type and color. Correspondence solicited. Day old chicks only when ordered.

Kenmore Poultry Farm - Maxey Lane & Gallatin Pike : Nashville, Tennessee

## SPRING WATER'S FAMOUS S. C. W. LEGHORNS

WE HAVE NO OTHER BREEDS

### Day-Old Chicks Eggs for Hatching

No strain can excel "Spring Waters" for vitality and the necessary qualities to produce prize winners. At the recent Baltimore show we won 2 firsts, 2 seconds, 1 fifth and 1 eighth. Our First Prize Pullet being the sensation of the show.

### Our Prices Will Please You Our Treatment Must Satisfy You

What we guarantee: That chicks will be hatched from eggs laid by our breeders only; the safe arrival of our chicks; the fertility of our eggs, and that you must be satisfied if dealing with us. Our capacity is 20,000 eggs at one sitting. We have a few choice Breeding Cockerels to dispose of. Write for free illustrated booklet. Write us before placing your order for this season's wants.

Spring Water Poultry Farm : Stockton, N. J.

killer on the market. I have tried numerous remedies supposed to kill lice, all of which failed, and now I earnestly encourage and cheerfully recommend "LICE-CENE" to all Poultrymen. Wishing you further success, I am, yours respectfully, Wm. Lodenkamper, 2148 Linton Ave., St. Louis, Mo.

### THE SANITARY HOVER AND GREEN FOOD GROWER.

Many have asked how it is, since the lamp of the International Sanitary Hover is placed in the center of the hovering space and can be lifted out through the top, that the hover can be warmer near the curtain than at the center. A very simple explanation will suffice to make this clear.

The hover is composed of two metal domes, one inverted against the other. The bottom of the lower dome is drawn down so as to form a vessel for the lamp to sit in. The chimney of the lamp extends up into the space between the dome and close to the under surface of the upper dome, or cover. The heat is driven against the under surface of this cover and spreads out in an even, cloud-like sheet, coming first into contact with the lower dome or ceiling over the hovering space at the edges near the curtain. An inch of mineral wool between the two thicknesses of the cover prevents excessive loss of heat upward. All heat is radiated downward upon the backs of the chicks.

For a detailed description of the Sanitary Hover, send a post card to the International Poultry Sales Company, Brown's Mills, N. J., asking for a catalog.

### ADAIR'S S. C. BLACK ORPINGTONS.

One of the most exclusive and up-to-date poultry plants is that of J. T. Adair, breeder of Single Comb Black Orpingtons, located in the town of Millersburg, Ky. Mr. Adair raises his birds on range on two places. One place is on the edge of town and contains three and one-half acres, and where he raises his young stock, the other place is where he lives and contains one acre; on this place he keeps his matings. He has one house 12x48 and six 18x24—cockerel house and conditioning room together—21 colony houses on the 3¼ acres. He is installing a 6,000-egg capacity incubator and will be in shape to do a nice baby chick business. No chicken grows faster than a Single Comb Black Orpington and people waking up to this fact creates a good demand for this variety of baby chicks. At the late Louisville, Ky., show in as fine a class of Single Comb Black Orpingtons as were ever under one roof together, Mr. Adair won 5th cockerel, 1st cockerel, 1st and 3d hen, 5th pullet and 4th and 5th pen, and Our Country's silver cup for best display for Kentucky breeders. I saw his exhibit at Louisville and handled his birds. They are grand in type and color and very large. Write for literature and list of winnings.—H. H. Coburn.

### LONGFIELD POULTRY FARMS.

D. K. Williamson, proprietor and owner of Longfield Poultry Farm, Bluffton, Ind., is wearing the smile that won't come off, owing to his fine winnings at the great Mid-West Show in Chicago, December 12 to 17, 1912, in one of the largest classes ever shown, and to his grand clean-up at the great Armory Show at Louisville, Ky., December 23-28, 1912, where the Longfield Rose Comb Reds more than asserted themselves, winning championship hen special; first, second, third and fifth cock; first hen; first second, third pullet; second, third, fourth and fifth cockerel; first old pen, and first young pen; silver cup for best display and specials for best color male and female in show. The Chicago winnings were champion female, 1st hen, 2d young pen, 4th pullet, 5th old pen, 5th cock shape and color specials for best colored male and female. In addition to these winnings the first cockerel and first pullet bred from females and his first Chicago cockerel 1911, which were mated by Mr. Williamson and sold to Mr. H. A. Robinson. It will be remembered that at Chicago, 1911 the Longfield Rose Comb Reds won every first and in the past two years have won more than twice as many firsts as any other Rose Comb breeder, at Chicago, as well as winning the lion's share at such shows as Louisville and Indianapolis. The fact is, Mr. Williamson is such a connoisseur at mating Rose Comb Reds he can produce any shade or point he goes after. He has a lot of cockerels bred same as the above mentioned winners. A word to the wise is sufficient.—H. H. Coburn.

## MAINTAINING A STANDARD.

That it is a strictly commercial proposition, and an extremely profitable one, to set and maintain a high standard on a big poultry plant, has certainly been conclusively demonstrated on the Peerless Farms, the modern poultry unit owned and managed by A. I. Rosbrook, near Northport, Long Island. And not only is it interesting as an achievement, but it makes mighty interesting reading.

Peerless Farms, to begin with, specialize on White Leghorns. The owner has an idea that this breed lay sooner and oftener and develop into better breeders, broilers and make altogether a finer grade of poultry products than any others. The manner in which the denizens of Peerless Farms perform would indicate that there is something in this theory, too. They are certainly fine specimens of good breeding.

The manner in which the breeding stock is kept up to the Peerless standard has been thoroughly worked out. First, every hen is rigidly trap-nested through her pullet year, and every one that fails to lay as many as 175 eggs is culled from the breeding pens. Next, every pullet is weighed on the day she lays her first egg and again at the end of the laying season. Every one that begins laying under 3½ pounds, or fails to lay under 5 pounds, is discarded. Pullets must have begun laying before five and one-half months old, although if a bird shows up well in other ways failure to meet this requirement will not keep her from the laying houses. Finally, every bird admitted as a breeder must conform strictly to the Standard of Perfection.

Mr. Rosbrook has an attractive leaflet, illustrated with views of the farm, that will be sent to any poultryman interested in a big plant properly conducted.

## WILLIAMS' S. C. BUFF ORPINGTONS.

Of course the poultry public at large know that John Williams of North Adams, Mich., is one of our veteran Orpington breeders, entering the game when it was practically in its infancy on this side of the Atlantic ocean. Mr. Williams has imported many fine specimens in Buff and other varieties of Orpingtons, being the very first to import the Rose Comb Whites. But the grand old Buff Orpington is his favorite and stand out among others like the majestic oak of the forest. I have had the pleasure of visiting his poultry farm many times during the past ten or twelve years and can mark a decided change for the better in Mr. Williams' Buffs. He now has them golden buff to the skin and true Orpington type. His place at North Adams contains about ten acres, and his buildings are of the open fresh air front style—and kept in the most sanitary condition. Mr. Williams raises some of his young stock on range but puts out hundreds of eggs among the farmers and culling severely in fall—no inferior bird reaches his place—by this method he not only simplifies labor but gets the most healthy and vigorous birds possible. Mr. Williams is a seeker for 200 eggs per hen record—and by careful selection has hundreds that hit this high mark. His birds have a long and honorable show record. Write him for catalog and detailed list of winnings.—H. H. Coburn.

## THORNILEY'S MOTTLED ANCONA.

One of the largest specialty breeders of the very profitable and popular Ancona is Mr. Willard J. Thorniley, located just east of Marietta, Ohio, on the Pennsylvania and B. & O. lines. His farm is known as The River View Poultry Farm, and consists of 80 acres of rich undulating land with excellent drainage making it especially adapted for a poultry farm. Some 11 years ago when Mr. Thorniley embarked in the Ancona specialty business he determined to improve the size of the Ancona and still adhere to the beautiful marking, and so strenuously did he work it out on this line, he has succeeded in making the River View strain of Anconas almost as large as Rose Comb Black Minorcas. The Ancona is a strictly business breed. Pullets begin laying at the age of from 4 to 5 months and keep right on laying, a few individuals reaching the 220 to 231 mark and many laying 200 eggs in a year. The flesh of the Ancona is yellow and as they are always as plump as partridge, they are very toothsome. Maturing as quickly as they do, the surplus cockerels make excellent broilers at a very tender age, and as Ancona eggs hatch like popcorn popping, Mr. Thorniley hatches them by the thousand and keeps only the very best for

## WINGOLD BUFF ORPINGTONS &amp; BUFF WYANDOTTES

Winners at St. Louis, Indianapolis and Cleveland. Several grand breeders left at bargain prices. Remember "Wingolds" are buff to the skin. Stock shipped on approval. F. A. Foertner - Box A, Berea, O.

## The Gillette Poultry Feeder

The machine that will make the feeding of your poultry simple and easy. It will feed any kind of grain—whole, cracked or mixed, better than the expert. The poultryman who neglects to get a Gillette Poultry Feeder deprives himself of the only really efficient method of feeding poultry. It saves a large portion of your grain and time, increases the vitality and productiveness of your stock. The only ball bearing machine on the market. Absolutely the only machine in the world that feeds BABY CHICKS as well as grown birds. You really get two machines for the price of one when you buy the Gillette. ORDER TODAY. One size, one-half bushel capacity, price \$2.50. Your name and address will bring our circular. Manufactured and for sale by

Fred W. Morse Co. -:- Providence, Rhode Island

## Again Win at Chicago

## Rose Comb Rhode Island Reds

Our Recent Winning Great Chicago Show—1st hen; 2d young pen; 4th pullet; 5th old pen; 5th cock; shape and color special on female and Champion Female in the strongest competition ever seen at Chicago. In addition to these, 1st chl. and 1st pullet were sired by our 1st cockerel of last year, which we sold to and mated for Mr. H. A. Robinson.

## At the Chicago Show, 1911

We won 1 cock; 1 cockerel; 1-3 pullets; 1 young pen. In the past two years we have won more than twice as many firsts as any other exhibitor at this great show.

## At Louisville, Ky., Dec., 1912

Where the north, south and west met, we won, 1-2-3 cocks; 1 hen; 2-3-4-5 cockerels; 1-2-3 pullets; 1 old pen; 1 young pen and Silver Cup for best display. If you wish birds of quality or eggs that will hatch them, write us. Mating list now ready. Stock on approval always.

Longfield Poultry Farm, Box 321, Bluffton, Indiana

## Who Has the Best White Rocks?

Last season I won 9 out of 10 firsts and more 2nd and 3rd than all others put together at the big shows—CHICAGO AND DETROIT. That made the fourth time that

HALBACH'S  
STAY WHITE STRAIN

won best display at Chicago. This year again they were crowned with glory by winning 1, 2, 3, 5 Cock; 1, 2, 3, 7 Cockerel; 4 Pullet; 1, 2, 3, 5 Hen; 1, 2 Pen, in a class of 232 birds, at the big Springfield Show, where the National Meeting of the White Fly. Rock Club was held. Also specials for shape and color. Besides this they clinched their claims when the 1st Cockerel was awarded the GRAND CHAMPIONSHIP for BEST MALE IN SHOW against 3500 birds. Have mated these and my other noted winners and will sell eggs from the very best matings ever put together at \$15.00 per 15. Utility eggs \$10.00 per 100. Catalogue 10 cents. Mating list free.

SPECIAL—12 utility females and male, \$25; breeding pens, 4 females 1 male, \$35

H. W. HALBACH : Box 1 : WATERFORD, WIS.

## Columbian and Silver Wyandottes

If you are looking for the very best in either of the above we can please you—our birds have demonstrated their quality by their winnings at Madison Square Garden and Boston for the last ten years.

J. F. Van Alstyne

Niverville, New York

## White I. R. Ducks "Fishel Strain Direct"

My winnings at Chicago, Milwaukee, Minneapolis and the National Fanciers' Club Show at Indianapolis, Ind., during winter of 1912 and 1913 stand unequalled. From fourteen entries at these four shows won thirteen prizes. I am booking orders for eggs from five grand pens that lay pure white eggs, mated by judge Hackett, who pronounced them of superb quality. Pen No. 1—My special mating contains unsurpassed quality; every bird in this pen was a blue ribbon winner at one of the above-named shows. Eggs from this pen, \$10 per setting. Pens No. 2, 3, 4 and 5 contain selected breeders, among which are my second, third and fourth prize winners. Eggs from these four pens, \$3 per 11, \$5 per 25, \$18 per 100.

EDW. M. LONGMORE, SOMERS, WIS

## S. C. WHITE, BUFF ORPINGTONS; S. C. W., BUFF, BLUE LEGHORNS; BUFF ORPINGTON DUCKS

Our 1st White Orpington Cockerel and A. P. A. Medal winner "Champion Snowflake," the sensation of Palace, N. Y., and Baltimore Shows. Our 1st Buff Cockerel, Grand Central Palace, a marvel in color and type. Our Leghorns well up in front and our ducks make clean sweep three shows. Stock and eggs.

Dunrobin Farm : Box 277 : Red Banks, New Jersey

## WHITE ROCKS AND WHITE WYANDOTTES

The big shows are over and it is interesting to know who made the greatest WINNINGS. At the BOSTON SHOW, Jan. 7-11-13 in a class of 230 White Rocks WE WON 1st and 3rd Cock; 1st Hen; 1st, 2nd and 3rd Pullet; 1st Pen, \$100.00 Champion Challenge Cup; Best Male; Best Display; Best 2 Cocks; 2 Hens, 2 Chks., 2 Pullets and Pen; Champion Male, Champion Female; Best Headed Male; 3 Best Cockerels and 3 Best Pullets.

Our Wyandottes won at New York, Dec. 31st to Jan. 4th, 4th Cock; 2nd Pen, in class of 18. Also at New Haven, Ct., Nov. 1912 on two entries, winning 1st Pullet; 2nd Cockerel and A. P. A. Silver Medal for best Cockerel in show owned by a member. Brockton Fair in Oct. 1912, on three entries winning 1st Cockerel; 2nd Pullet and 1st Pen. Shape and Color Special.

Extra choice breeding birds for sale. NO ROCK EGGS for sale before April 15th. Wyandotte Eggs after Feb. 15th. Remember WE HAVE A RECORD. Tel Marlboro Ex. Be sure to state WHICH BREED when writing us.

Rockandotte Farm : W. R. Graves, Judge  
Mrs. S. H. Graves, Judge : R. 3, Southboro, Mass.

## "O. K." Poultry Litter

TRADE MARK

### We Will Mail You a Free Sample

Write for it today

"O. K." POULTRY LITTER is the most wonderful litter for BABY CHICKS and POULTRY of all kinds. It's cheaper and ever so much better than Straw, Clover, Alfalfa, Sawdust, Shavings, or anything else anyone has ever thought of for litter. Everyone who tries it will use nothing else.

In the BROODER one lot of "O. K." Litter lasts until the chicks have outgrown the brooder without one single cleaning out, and always keeps the brooder clean, dry and sweet. In COOPS, LAYING HOUSES and SCRATCHING PENS, "O. K." Litter dries up the droppings so that the house is always dry, clean, sweet-smelling and sanitary, and needs cleaning out only once every three or four months. "O. K." Litter is a tremendous saver of time and money.

"O. K." Litter will not burn. Lice will not come where it is used. TELL US HOW MANY HENS YOU KEEP—WE WILL TELL YOU HOW MUCH "O. K." LITTER YOU NEED.

Write for free sample and printed matter to-day.

You need it

THE O. K. CO., Dept. 158  
160 Pearl Street New York City.

his breeding pens, many of which score from 94 to 96½ points. The males heading his pens are the best that grow, "females accordingly." The River View Anconas have a fine show record and Mr. Thornley offers incubator eggs by the thousand. The buildings are good and kept sweet and clean—and are constructed on the fresh air front plan. Visitors are welcome at River View and the catalog is yours for the asking.—H. H. Coburn.

### A BLUE RIBBON CATALOG.

Wide interest and much comment of a decidedly favorable nature have been created in poultry circles by the recent appearance of the superb catalog of the Tywacana Farms Poultry Company, Farmingdale, Long Island. Of course, the appreciation from the breeders and fanciers has been due purely and simply to the excellence of the material set forth in the book, and the interesting manner in which the story of one of the greatest poultry plants in the East is told. Indeed, "Tywacana Quality"—this is the title of the publication—is well worth reading by any poultryman, in any section. It is in the nature of an achievement—the setting of a high standard and the living up to it.

From the printing trade, however, have come other comments, equally favorable and of a different nature. These have centered on the mechanical excellence of the book. Bound in a rough blue cover, on which is embossed in rich gold the trade mark and emblem of the Farms, the exterior is decidedly prepossessing. Inside, everything is right up to the style set by the outside. Two colors, an illustration from an actual photograph on every page, and a most attractive type display, combine to make the booklet a thing of beauty as well as interest.

It is convincing evidence of the increasing progress and stability of the poultry business when such a catalog appears. A fine product requires—nay, demands—a fine catalog, and should have it. The superlative quality and excellence of the Tywacana stock certainly are well set forth in this book, and no poultryman should be without a copy on his desk. A postal to the Tywacana Farms Poultry Co., Farmingdale, L. I., N. Y., will bring one by return mail, postage paid.

### SENSATIONAL WINNINGS.

It is doubtful if any fancier has made more rapid strides to success nor has more certainly arrived in about six years than Mr. Guy Daily, proprietor of "Fairview," Jefferson, Ind. During a long illness with typhoid fever Mr. Daily contracted the "chicken fever" as a complication, and after much study and a most thorough investigation into a list of breeds that looked favorable to him, he decided that the White Plymouth Rock as the breed meeting all necessary requirements, and which breed he now recommends from personal experience, has proven them the best money makers along utility as well as fancy lines. Mr. Daily went at it right and started with the very best he could buy, and with bulldog persistency he has made Fairview White Plymouth Rocks one of the best and leading strains in existence. Mr. Daily is one of the most pleasant and conscientious young men in the fancy poultry business and this, too, helps as well as the superiority of his stock. Fairview contains fifty acres of well drained rolling land, having a gradual southeastern slope. There is much beautiful shade, besides 450 fruit trees. The residence is a very modern and attractive bungalow, and the buildings are chiefly of the Tolman and Woods Semi-Monitor fresh air type, this style being the most satisfactory to Mr. Daily, and he is remodeling all other styles to conform to this plan. He has recently built a conditioning and wash building. He hatches all early chicks with incubators, but sets hens as fast as he can procure them, maintaining the hen hatched chicks prove the show birds. However, he raises them in brooders, claiming he can control them better and keep them free from vermin. To show what the Fairview White Rocks are for layers, they won the White Rock class in the Evening Post's International egg-laying contest, and were third in the entire contest. The show record for 1911 at Louisville and Indianapolis prove the Fairview Rocks winners and breeders of winners. Kentucky State Show, January 12, cock, 1st, 2d, 3d; hen, 1st, 2d, 3d, 4th, 5th; cockerel, 1st, 3d, 5th; pullet, 1st, 3d, 5th; pen, 2d and 3d. Special Pratt cup for best pullet in any class in show. A. P. A. silver medal for best White Rock cockerel in show. Poultry Ideas for best cockerel in show, all varieties competing. Louisville Poultry and Pet Stock cup for best display of Rocks any one variety. Five dollar gold special for best

bird in show bred and exhibited by member Kentucky State Poultry Association. Gold band for champion pullet in show. At three of the most hotly contested of State Fairs, Fairview Rocks won 28 out of a possible 32. At the Great Mid-Week Poultry Show at Chicago, 1911, in a class of 186 Fairview White Rocks won 2d cock in class of 28, 3d pullet in class of 35, and 4th pen in class of 12, and the remarkable thing about this great winning was the birds were not especially fitted—just caught and washed. The past season they made a wonderful record at the Tennessee and Illinois State Fairs. Last but not least at the last Chicago Show, in the strongest class ever shown in the Northwest, he won 1st hen, 1st and 3d pen, 5th cockerel and championship hen. I have been down to his farm recently and saw his entire flock, which surpasses all previous records unqualifiedly. Write for catalog and address **Guy Daily, Jeffersonville, Ind.—H. H. Coburn.**

## SCRANTON'S SINGLE COMB REDS.

While in the South I enjoyed the hospitality of Mr. H. B. Scranton at his beautiful home on the edge of Rising Sun, Ind. I thought I had seen Reds, and the best Reds that grew, but never before. Mr. Scranton maintains that to raise good Reds one has to know the family tree and he has the most remarkable knowledge right at his tongue's end of the pedigree of each individual, the writer ever came in contact with. One can pick any bird in his flock and Mr. Scranton will tell how he was bred and show you his sisters and his cousins, and his aunts, and mate him to such and such a bird, what he will produce. As before stated, it is most remarkable. As is generally known, Mr. Scranton is old at the business and has given Reds his closest study and he surely has arrived. His place in Rising Sun contains ten acres, but he raises most of his young stock on a beautiful farm of 325 acres, where he has some 20 colony houses, mostly double, and whatever other buildings he needs, until he is ready to bring them in in the fall. In Rising Sun he has all necessary buildings. One conditioning house is 20x36 feet and is lathed and plastered, and has a capacity of 50 birds. There is another double deck conditioning building, with runs for cockerels. In his brooder house he uses International hovers and runs his Prairie State incubators in basement under residence. Also raises many chicks with "good mother hen." I handled many of his birds at his place, and those at the Louisville show, and never saw a more even bunch nor such grand color and sharp black points. Mr. Scranton's Single Comb Reds have a long show record and some of his more recent winnings are as follows: At the great Louisville, Ky., December 23-28, 1912, cocks, 2d, 3d, 4th and 5th; cockerels, 1st, 2d, 3d, 4th and 5th; hen, 2d and 5th; pullet, 2d, 4th and 5th; old pen, 1st and 2d; young pen, 1st and 3d; silver cup for most points of any exhibitor—114 points in all. Hagerstown, 1912, cock, 2d and 5th; cockerel, 2d and 5th; cockerel, 1st, 2d and 5th; hen, 1st, 2d and 4th; pullet, 3d and 5th; first young pen, every bird getting a place but one; special for best Red in show. Chicago, 1910, won five 1sts and all specials. Mr. Scranton is mating 15 pens for the egg trade and these pens are headed by these winners and others not mentioned, and contain these and many other winning females. Mr. Scranton has made a science as well as a business of raising Single Comb Reds. Write for his catalog.—H. H. Coburn.

## PEERLESS POULTRY FARMS.

At the edge of Kenton, Ohio, lies the Peerless Poultry Farm, and it is one of the largest real poultry farms in Ohio. This farm is not only large in the utility and fancy business but is cutting quite a swathe in the baby chicks industry. The buildings are among the finest and consist of one laying house 10x240 feet, one 20x200 feet, one 12x60 feet, 15 movable colony houses 8x8 feet. The incubator cellar is a fine one built of stone and is 30x40 feet and has a capacity of 12,000 eggs—all the large buildings are lighted with electricity—and incubators are all heated with gas, all burners burn a blue flame from which there is no disagreeable odor. The incubator cellar has perfect ventilation and this farm is in ship shape to successfully handle the baby chicks trade most satisfactorily and can not help hatching the strongest of chicks. White Wyandottes and Single Comb Brown Leghorns have been added for the baby chick trade. The pens mated are of first-class stock, containing many high class exhibition birds that will

produce winners, and as they were selected from heavy egg producers they will make good as layers for those who want flocks for eggs and meat. The Peerless Poultry Farms Single Comb White Leghorns and Barred Plymouth Rocks already have a nifty show record, winning at such great shows as Chicago, Columbus, Toledo, Fort Wayne, Findlay and Coxey. The males they have left for sale are the best and most vigorous they ever raised—the kind that will fertilize eggs to the tune of 100 per cent hatches. The water supply on this farm comes from a drive well 140 feet deep. This farm has been doing business since 1905, so is no experiment but a reality. Write for catalog.—H. H. Coburn.

### AT LAST, A METHOD OF HATCHING THAT SATISFIES.

There is one great factor in the poultry business that interferes most seriously with the profits of the business. This is not having your chickens properly hatched so as to make a rapid and steady growth from the time they leave the shell until marketed, or put in the laying or breeding pens. Hundreds of thousands of dollars have been—and are being spent today, in bringing out and advertising the many "so-called" solutions of successful chicken hatching, both for natural and artificial methods, principally though for artificial inventions. But with all the many inventions that are being so widely advertised and exploited from one side of the country to the other, through the scores of poultry and farm publications, they have sooner or later failed to satisfy the demands of the poultry raisers who will only be satisfied with the largest possible profits from his fowls.

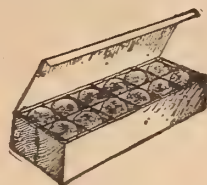

The thousands of poultry keepers who have suffered the disappointments and heavy losses inflicted upon them by these inadequate methods of hatching, have manifested much faith in the old adage "Time changes all things," which has certainly not disappointed them inasmuch as Elmer S. West, a poultry expert, has invented and perfected the famous Paradise Hatchery, which is voluntarily admitted by users to SATISFY.

If the Paradise Way doesn't solve your chicken hatching problems Noah is not dead, but yet lives. Space will not permit here to describe the many points of superiority of the Paradise Hatchery over all other methods of hatching, but poultry raisers who wish to make their chicken hatching a pleasure as well as the most profitable, should not fail to write Elmer S. West, Ewing, Ky., for his free circular, which will be sent free to the readers of American Poultry Journal.

Great interest is being manifested by breeders of fancy poultry, to secure a first-class reliable light weight box, in which to ship eggs by parcels post, and have the eggs arrive in a hatchable condition in any of the mail zones in the United States. The law requires a box to be made in such a manner that each egg will be securely packed and not touch each other. We have made an investigation, and show a

### EGG BOXES FOR PARCELS POST.

small cut of the Rippley Box, which has been placed on the market for the shipment of eggs for hatching, by parcels post and express shipments. These boxes are made 1 setting, 2 setting, 50 and 100 egg sizes. They are made of strong corrugated double wall cardboard, have corrugated partitions, and made so each egg can be packed without touching each other. A trial test was made in St. Louis. A 1 setting box was packed for postal shipment, and was cast out of a seven-story building to the concrete street, and not one egg was broken. They will stand a weight of 3,000 pounds. They are provided with gummed tape for sealing box, and a gummed label for the address.

Rippley's Perfect 3 Piece Egg Boxes

We are pleased to show a picture of The Rippley Perfect Egg Carton, which is made in one setting size. These boxes are made of strong cardboard, and are suitable for delivering eggs on local rural routes to cities and towns. Thirty dozen of these cartons can be packed in an egg case. They are also provided with the name

of the breeder or farmer in one or two colors, and the breeder that puts his eggs up in cartons advertises his business, and can command 5 to 10 cents more per dozen for his fresh eggs. As the above cartons and egg boxes meet the parcels post requirements, and breeders can deliver one setting of eggs as far as in the fifth zone at a cost of 23 cents, he is able to make prices delivered to his customers. It will be wise for customers to investigate these boxes, and note the ad of them in this issue.

Day old chicks can not be sent by parcel post. Address Rippley Mfg. Co., Box 027, Grafton, Ill.

### QUICK INSTALLATIONS.

With the true sectional construction of the Candee Incubator, one does not have to plan months ahead in order to get one installed and running. All this has been simplified and now Candee customers buy just the same as they would small machines. If a man wants a 1,200 egg incubator, he writes or telegraphs for it and that day the two-crated sections and the heater are loaded into the freight car and sent on the way. Everything is all complete and the purchaser puts the heater in place in less time than it takes to set a kitchen range. The incubator legs are set up and the sections lifted on and in a day or less, the machine is ready for the eggs. Thus the mammoth business has been revolutionized by the Candee Incubator & Brooder Co., Eastwood, N. Y. Because their machine is all built and each section is completed at the factory, Candee equipment has been approved by the underwriters. This means cheap insurance.

We are pleased to note that in one of the largest Ancona classes in the history of the New York Show, Mr. H. Cecil Sheppard of Berea, Ohio, carried off the majority of the first and second prizes in both Rose Comb and Single classes. This makes the sixth consecutive year that Sheppard's famous Anconas have been victorious at the Nation's greatest show. We are pleased to compliment Mr. Sheppard on his record and from the number of favorable comments received at the show, we believe that his birds are all he claims for them.

Our strains are of the best blood of the country range raised, perfectly housed and fed, and show the size, vigor and health that guarantee early and heavy egg production. Write us early for prices and information.

INGLESIDE FARMS : HOOPSTON, ILLINOIS

### THE IMPORTANCE OF THE PACKAGE.

Nothing creates so favorable a first impression on the purchaser of an article, or renders him so liable to be pleased with it, as to receive his purchase neatly enclosed in a trim attractive package. This is one of the fundamental laws of selling.

This law is particularly applicable in the poultry business. No matter how high in quality a consignment of eggs or baby chicks may be, if it reaches the customer in a dirty, battered or unattractive package, he will instinctively feel that his purchase has not come up to his expectations. This unfavorable first impression is not the end, however. Those eggs and chicks will have to be really much better than had been expected in the first place, to overcome the prejudice caused by receiving them in so sorry a condition.

A strict adherence to this principle of the perfect package has made the fortune of many a man whose product was no better than that of a hundred other men in the same line, but who made his article so well and so favorably known because of its satisfactory container that its demand distanced that of all its competitors.

A box that fills every requirement of absolute safety, attractiveness, convenience and cheapness for the shipment of table and hatching eggs and day old chicks, and that has become widely popular among the largest poultry shippers in the country, is the Wright Box, manufactured by the Ty-wacana Manufacturing Company, Farmingdale, Long Island.

An interesting book on the Wright Boxes, full of valuable shipping information for poultrymen, can be had by writing the Ty-

wacana Manufacturing Company, Farmingdale, L. I., N. Y., and asking for their book on the Wright Box. Don't wait—write today.

### BOTHER OF FILLING THE LAMP ELIMINATED.

When folks start out to raise chickens they figure every cent closely—they watch expenses carefully in order to figure out the profits at the year's end. And so when a farmer or poultryman, or his wife, either, for that matter, decides to buy an incubator they want to know exactly what every detail is going to cost.

And when it comes to counting this cost, we must not forget two of the biggest factors—time and labor. And that is why the X-Ray Incubator is so popular—it saves so much of both; for one filling is enough for the whole hatch. Anybody who has a working incubator on his mind, realizes what a relief it is. No anxiety—no danger from forgetting.

And think of the cleanliness! The large oil tank holds one to two gallons and this does the work to a minute! In addition to this point of economy there is safety gained. The automatic trip is one of the patented features of the X-Ray and it so manages the burner that when there is any excess of heat, the flame is instantly cut down, and the required temperature restored. This keeps the eggs exactly as if an old hen were covering them, and it doesn't waste one drop of oil. Besides every good chicken-raiser knows that too much heat is as bad as too little, and this danger is never to be feared with the new patent. And we must not forget the

economy—four to six dollars a year saved on oil!

One thing which attracts the attention of everybody in connection with this machine is that no matter whether the user is a poultry fancier, a regular dealer in chickens, a farmer on a large scale or the man on a small suburban lot, who sells eggs "on the side"—they are all agreed as to the wonder-workings of the X-Ray Incubator.

The manufacturer lives at Wayne, Nebraska, and will be glad to send letters, catalogs, etc., to back up what these folks all say. Anybody who is interested can write—it's only a postal anyhow, and an incubator is a mighty important feature of life in the chicken lot. Investigation is well worth while.

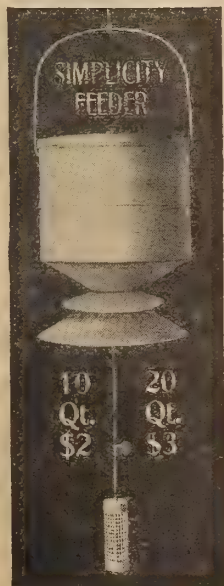

### THE CORNISH FOWL AT CHICAGO.

Through an oversight no mention was made of the grand exhibit of Cornish fowls at the Chicago show in our report of this show in our January issue. This is to be regretted for exhibit of this variety of fowls at Chicago was certainly worthy of special mention, as it was no doubt the largest and best display of Cornish that will be gotten together this season, as this was the Cornish Club show, and the members of the club entered their best birds to compete for the club specials and other prizes, and entries were made from all sections of the country, which is evidence of an increasing interest being taken in this magnificent variety of fowl.

The exhibitors in this class were H. A. Huey, Novi, Mich.; Jas. A. Hale, St. Paul, Minn.; Elmer J. Williams, Ashley, Pa.; Dartmoot Yards, Oconomowoc, Wis.; Dr.

#### RIDGE EGG FARM.

Mr. K. M. Turner, known in every country as the inventor of the dictograph, and the method of catching criminals that has been used so successfully in the Ohio legislative graft, the McNamara brothers, and the iron workers recently convicted and sentenced to an aggregate of one hundred and one years at Indianapolis, has produced a new one that will be of great value to poultry plants.

Mr. Turner is the owner of the Ridge Egg Farm at West Nyack, New York, where he takes great delight in his flock of prize Campines and Leghorns. While the place is not large, about 23 acres, it is most complete, having gas, water and in fact all city improvements not only in the residence, but in the various poultry houses about the place, and which includes a new exhibition and wash house which promises to be one of the show places for fancy stock in and around New York.

To facilitate the working of his employees he has just connected up all of his buildings on the farm with the Dictograph-Turner telephone system, of which he is the inventor. Sitting in his office on the farm, Mr. Turner or his superintendent, Mr. C. W. Cornell, can keep in touch with every development of the day in other parts of the farm. Through the "loud" speaking attachment of the master dictograph, the cackle of the birds in the different houses

can be heard in the office, by the lowering of a button on the instrument.

By a supplementary attachment the Dictograph-Turner telephone system is made to act as a burglar alarm in addition to providing communications. At night, the turning of a switch makes the system a perfect safeguard, and insures instant warning being transmitted to the home of the superintendent, on any attempt to enter the buildings so connected, either through the window or other opening. This new application of the Dictograph-Turner telephone system by Mr. Turner will be hailed by owners of fine birds as most invaluable, insuring them a measure of protection they have never before enjoyed.

On his farm, Mr. Turner has several thousand selected White Leghorns, among them a number of prize winners of recent Madison Square Garden shows. He is also making a specialty now of the development of Silver Campines from birds especially selected by him in England in 1911.

Mr. Turner believes that there is a great future in this country for the Campines and he is applying himself very earnestly to popularizing them among the bird fanciers on this side of the Atlantic. Through careful breeding Mr. Turner is now producing Campines that are declared by many who have seen them to be superior to the imported birds.

The farm also raises Indian Runner ducks, of which there is a very large and exceptionally fine colony. At the recent show at the Grand Central Palace and Madison Square Garden, Mr. Turner's birds were awarded numerous prizes.

Black Orpington Club catalogue for 1913 now ready! The new catalogue contains some 200 more names than did the last catalogue. Carl J. Carter of Columbus, Ind., is the new secretary and Percy W. Cook the vice president. The members of the club are elated at the showing of the Blacks in the Missouri laying contest in defeating the other varieties of Orpingtons in number of eggs laid as well as

defeating the Leghorns. Those who wish to see a copy of the catalogue may have one by sending a 2-cent stamp to the secretary, Milton W. Brown, Sta. L., Cincinnati, Ohio.

#### PROBLEMS IN BABY CHICK PRODUCTION.

The tremendous growth of the baby chick industry has necessarily brought about many changes and improvements in the methods employed on the plants where the baby chick has come to be a vital factor in the total sales. Special operations have been devised and radical alterations made in those formerly in vogue. A rapid survey of some of the most important of these will be of interest to every poultry keeper.

The Michigan Poultry Farm, located at Lansing, Michigan, has an incubating capacity of 60,000 eggs at a time, and hence may be classed as one of the foremost day old chick plants. Its output runs into the hundreds of thousands, yet for years it has been two-thirds sold months before the chicks were hatched. Knowing so nearly its demand, the farm has been able to work out a definite line of operations that assure greatest certainty of hatching and healthiest chicks. It is a fact that for years old customers have booked orders for nearly every chick hatched, months ahead.

All buildings at Michigan Poultry Farm are of the fresh air type, among them several Tolman houses. The new open front laying house is one of the most modern in equipment in the country. It is built on the plan advocated by Gowell, of Maine, and in it each bird has the run of 2,500 square feet of floor space, instead of the 250 feet usually given the average flock.

This new house accommodates 750 layers and breeders, with the greatest abundance of air, water, fresh feed and exercise. There is a specially built bed of clean white sand that has proved a most profitable addition. Adjoining, are feed rooms and quarters for the attendants. Beneath are found engine

# THE HENDERSON STRAIN OF BARRED PLYMOUTH ROCKS

**AT CHICAGO DECEMBER 1912**

In competition with the best from the yards of America's foremost breeders I won 1st and 2d cockerels, 2d cock, 2d and 3d pullets, 5th cockerel bred hen, 4th cockerel bred pullet, 3d cockerel mated pen, 3d pullet mated pen, and **GRAND CHAMPION MALE OVER ALL THE BARRED ROCK MALES IN THE SHOW.**

Compare my winnings at this the greatest Barred Rock show ever seen in the Mid-West with those of my competitors and **YOU SET THE SEAL OF CHAMPIONSHIP ON THE HENDERSON STRAIN.** Write me your wants in Barred Rocks. I can furnish anything you desire and guarantee satisfaction. My 1913 mating list describing my 30 breeding pens in both cockerel and pullet lines is now ready for distribution. Write for it.

**W. W. HENDERSON 921 SECURITY BLDG. ST. LOUIS, MISSOURI**  
FARM, BRIDGETON, MISSOURI..

room and workshop. In the former is a  $4\frac{1}{2}$  H. P. Olds engine that supplies power for the various apparatus on the farm and also pumps water through the modern installation, recently installed. In the cellar are also sprouting rooms, for making the winter feeds of sprouted grains.

The largest incubator cellar is 48 by 122 feet. In it are four 15,000 egg Hall Mammoth incubators, making a possible capacity of 60,000 eggs.

Over the incubator cellar is the nursery brooder house, to keep chicks until they go to the range or the colony houses. This brooder is 48 by 122 feet and is equipped with a hot water system, invented by Joseph Tolman.

The superintendent of the Michigan farm is a graduate of the Cornell Poultry College, and is a man of wide experience and ability in his line. Professor Rice's Cornell balanced ration is used for the birds on the farm, a feed that is perhaps the best ever invented for the White Leghorn.

In addition to these superb mechanical equipments, the personal care and attention, the long experience and the rigid culling and selection of every bird, have resulted in the Michigan Poultry Farm eggs, chicks and breeding stock securing a reputation, just and well earned, for sturdy vitality and health. Thousands of customers testify to entire satisfaction on these scores.

The Michigan Poultry Farm will send an attractive booklet, with description and prices, on request. Address Michigan Poultry Farm, Lansing, Michigan.

Miss Henrietta E. Hooker, South Hadley, Mass., breeder of Buff and Blue Orpingtons, exhibited 14 birds at the late Baltimore Show and eleven of these were placed. Among the prizes won was first cock and first pen. Of course, this is not to be wondered at, as her birds are always winners wherever shown. Miss Hooker is the pioneer in Blue Orpingtons, being the first importer. Her Blue Orpington pens are exceptionally fine this season and she is now booking orders for eggs. Send for her illustrated catalogue and mating list, containing

pictures and descriptions of birds. Mention the American Poultry Journal.

### AJAX IMPROVED OXYGEN VITALIZER.

Editor American Poultry Journal:

The above is the heading of a letter that we recently received from Mr. Ira DeLine, of Olympia, Wash.

Mr. DeLine wrote us in the early part of the season of 1912 saying, "My losses from 'dead in the shell chicks' and white diarrhoea have been frightful. If your oxygen vitalizer will put a stop to these losses, it is the greatest thing that has been presented to the poultrymen of this country in twenty years."

We sent him a vitalizer, and in a short time came a most enthusiastic letter telling of the wonderful results that he had secured from the use of the vitalizer.

Recently, Mr. DeLine has taken the liberty of writing us again as follows. His letter is of such a nature, and we feel means so very much to the poultrymen who are engaged in hatching chicks by artificial methods, that we send it to you for publication:

Olympia, Wash., Dec. 27th, 1912.  
Reliable Poultry Specialty Co., Alexander, N. Y.

Gentlemen: In presenting to the poultrymen of this country your Ajax Improved Oxygen Vitalizer, you need make no apologies.

Scientifically it is in line with the most advanced thought on the subject of artificial incubation. Oxygen is of course a powerful germ destroyer; and, as the life giving property in the air we breathe, it must as a matter of fact be beneficial to the little chicks that have been confined in the small egg chamber for twenty-one days, and surrounded as they are for the last three or four days of the hatch with the fumes of a poisonous gas.

The truth of the matter was never so forcibly brought to my attention as when I stood in front of my incubator, and saw

the wonderful effects of the oxygen on the baby chicks as they broke the shell and found themselves surrounded by the oxygen atmosphere. It seemed to act like a tonic. The chicks came stronger, bigger, not a "dead in the shell" in the whole lot, and not a case of white diarrhoea from all the chicks hatched last year from the oxygen attachment.

If any one has the least doubt as to the claims you make for this truly wonderful device, you may refer them to me, and I will be only too glad to verify every claim that you make for your Ajax Oxygen Vitalizer. Yours very truly,

Ira N. DeLine.

Mr. DeLine is one of the prominent poultrymen of the Pacific Coast, and as we believe stands very high with his fellow poultrymen, and all those who know him.

And this, Mr. Editor, is simply in line with hundreds of other letters of like import.

Surely the oxygen treatment as a preventative of the chicks dying in the shell, and of white diarrhoea, seems to be coming better understood. As the Journal's many readers will no doubt be glad to see what those who have used the Vitalizer think of its actual merits, we trust that you will have the kindness to print the letter of Mr. DeLine in your valued columns. Reliable Poultry Specialty Co., Alexander, N. Y.

One of the surprises at the late Madison Square Garden show was the exhibit of Rose Comb White Orpingtons, both in quantity and quality. This variety of Orpington is certainly coming into popular favor very rapidly, as is shown in the large numbers that are now being exhibited. The Lawrence Jackson Farm, of Haysville, Pa., had a number of very fine birds at Madison Square Garden and won as follows: 1st and 3d cock, 1st and 4th cockerel, 1st and 3d pullet, 2d and 3d hen, 2d and 3d pen, club special white cockerel, club special best display, twelve ribbons in all.

OCULUM increases egg yield 20 per cent; a free trial; ad page 280.

## KAUP QUALITY BUFF ORPINGTONS

Won seventy prizes last season and so far this season at CHICAGO, INDIANAPOLIS, KNOXVILLE, SPRINGFIELD and BIRMINGHAM, etc., at National and Branch Meetings of the Buff Orpington Club—the hottest shows possible for Buff Orpington Competition.

At the Central Branch meet of the Buff Orpington Club in Springfield, Ill., last month which was, according to the officiating judges and other high authorities present, the highest class show ever caged and equal to the Madison Square Show, I captured the banner prize—

### First Prize and Silver Cup for Best Pen in a Class of Fourteen Pens

When you consider that I had the best collection of five birds out of seventy in a Branch meet of the Buff Orpington Club, which is the hot bed for the best Buff Orpingtons in the country, you will appreciate what this win means in a national show such as the past Springfield, Ill. show was. My other winnings at this show being third cock, third hen, and fourth pullet. The judge stating my cock was the best one there but lost a better place account of not being through moulting.

### 1913 Catalogue and Mating List Out February 1st

Will be as last year the finest Buff Orpington mating list published in keeping with the quality of the birds it strives to describe. Will be out Feb. 1st and will describe 20 of the finest special mated yards—all BUFF ORPINGTONS.

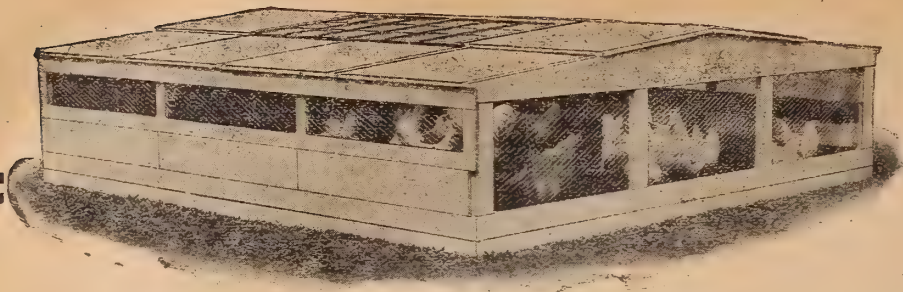

I WANT EVERY INTERESTED PERSON TO HAVE A COPY, as it contains many new, exclusive and valuable features which you should not overlook taking advantage of. Cost me \$500 to get out, but I will send you a copy—FREE. WRITE FOR YOUR COPY—NOW.

### STOCK, EGGS AND BABY CHICKS FOR SALE NOW

EXPRESS PREPAID ANYWHERE on eggs, chicks and exhibition birds. I still have 75 cockerels left at \$3 and \$5 each. Some of them sons of the first prize winners at the Madison Square Show a year ago, if you wish, at \$3 each. Others, \$5, \$10 and up. Satisfaction guaranteed or no sale. Address

F. A. Kaup, Buff Orpington Specialist, Member A. P. A. and 10 Other Organizations, Chicago, Illinois. Tel. Belmont 1724

**THE UTILITY COOP.**—These coops are made in two sizes: 6x12 and 12x12 feet. They have many advantages over the higher poultry houses, being warmer in winter and cooler in summer. This is accomplished by the scientific plan of ventilation. These coops are used for farm poultry at Elmira and also at Florida poultry farm. Prices: 12x12, \$40.00 complete. 6x12, \$25.00 complete.

# The New Poultry Farm

## For One Hundred Thousand Laying Hens

A Southern poultry paper editor—who didn't have faith enough in the poultry business to keep chickens—once said, "If Philo can make so much money on the corner of a city lot keeping poultry by his System, why doesn't he buy an acre of land and make more money?"

That was good advice and is just what he has been doing. He has nearly a thousand acres of land in and near the city of Elmira, but only one acre of this land is devoted to poultry, yet the sales from this acre gave him a business of over \$25,000.00 last year.

Extensive plans are being made to extend the Elmira plant, which may result in covering a large part of the thousand acres with poultry. This, however, is only a small part of the whole story. His poultry business, by his own system, has been so very successful that he is extending the business into the state of Florida, where he has purchased thousands of acres of the very best land and has already commenced developing and building a poultry farm to accommodate 100,000 laying hens.

A complete saw-mill and planing-mill is now on the land, with the flying saw-dust and shavings to mark the beginning of the largest poultry farm in the world.

This great farm is located near Jupiter, Palm Beach Co., Florida, where the finest oranges and grape-fruit are grown.

Send postal for more particulars about the big farm in Florida.

IT IS AN ENCYCLOPEDIA OF CHICK-EN-DO, and no one can well afford to be without it. Will be mailed to anyone upon receipt of only 15c. Money refunded if not pleased.

C. C. SHOEMAKER, Box 605, Freeport, Ill.

## HARRISON'S RECORD.

Mr. F. E. Harrison, of Menominee, Mich., can well be proud of his famous Royal Reds, for his wonderful win at Indianapolis is without doubt the greatest win ever made by any R. I. Red breeder.

At the Chicago show, December, 1912, Royal Reds won 1st, 3d and 4th cock, 2d and 3d hen, 4th cockerel; 1st, 2d and 3d pullet; 1st and 2d old pen and 1st young pen. Mr. Harrison was so well impressed with 1st and 2d Chicago cockerels that he bought both of these birds from Mr. Ris-ecker and has every first prize winning male from the great Chicago show, December, 1912.

In addition to his winning the prizes above at Chicago, Royal Reds won best display with the total of 87 points, and his winning in every class is a new record at Chicago, for this is the first time that any breeder has ever won in all six classes in one showing at Chicago.

At the Wisconsin State Show, January 11-16, 1912, Royal Reds won 1st, 3d and 5th cock; 1st, 2d, 3d, 4th and 5th pullet; 1st, 2d and 5th cockerel; 1st, 2d, 3d and 5th hen, and 1st, 3d and 5th pen, and gold special for the highest scoring parti-colored pen in the show; gold special for best display and all shape and color specials offered by the R. I. Red Club of America.

At Detroit, January 25-31, Royal Reds won 1st, 2d, 3d, 4th and 5th cockerel; 1st, 2d, 3d and 4th hen; 2d, 3d and 5th pullet, and 1st cock and 1st pen with only one cock and one pen entered.

These two last wins were followed by his victory at Milwaukee, where on a small entry Royal Reds won as follows: 1st, 4th and 5th hen; 1st and 6th cockerel; 1st cock; 1st pen and 1st pullet.

Mr. Harrison claims that this Milwaukee show was one of the strongest Red shows that he had ever attended.

The greatest victory that has ever been made by Royal Reds was won at the Indianapolis National Fanciers' Show just closed, the dates being January 11-17, 1913, where the remarkable record was won as follows: 1st, 2d, 3d, 4th and 5th cock; 1st, 2d, 3d and 4th hen; 1st, 2d, 3d and 5th cockerel; 1st, 2d, 3d, 4th and 5th old pen; 1st, 2d, 3d, 4th and 5th pullet; 1st, 2d and 3d young pen, and the one hundred dollar challenge cup for best display with a total count of 167 points credited to Royal Reds when the combined amount of all competitors was but 11.

Mr. Harrison has been secured to judge seven national shows next year, and is open to engagements for other dates.

The latest catalogue of Royal Reds offers a special inducement for eggs for hatching and is free for the asking, by addressing Mr. F. E. Harrison, Box 30 (by mentioning this paper), Menominee, Mich.

## DUSTON WYANDOTTES WIN AGAIN.

The White Wyandottes bred by Arthur G. Duston, South Framingham, Mass., are famous for the way they win year after year at all the large shows in the country. Mr. Duston does not aim to show his birds himself at more than one or two of the large shows each season, as he does not wish to come into competition with his customers. At the late Albany, N. Y., show, where there were over three hundred White Wyandottes in competition, he made a most remarkable win, considering the large number of birds in the classes. He won 1st, 2d, 5th and 6th cockerels on an entry of four birds; 2d, 3d and 4th cocks on an entry of three birds; 2d and 6th pullets; 2d and 3d hens, both old and young; first display. Also a large number of specials. Send for his catalog if you want stock or eggs that will improve your stock. Mention American Poultry Journal.

A. D. Freese, Mohawk Village, Ohio, the well-known breeders of Crystal White Orpingtons, made a grand winning at the late Coshocton, Ohio, show, where he won 1st cock, 1st, 2d and 3d hen, and birds hatched from eggs supplied by him won 1st pullet, 1st pen, 1st and 2d cockerels. He also won special prize for best exhibit in the show. He has two grand special pens mated for 1913. Pen No. 1 comprises some of the best hens in Ohio, headed by Oliver "A," the big 11½-pound bird, and sire of the above winners. Several of his last year's pullets scored as high as 94½ and one 94½. Pen No. 2 comprises his best hens and pullets, mated to a massive, big-boned cock bird, winner of 1st and special prizes. Mr. Freese has concluded to reduce his prices this year on eggs for hatching as he is in a position to supply an unlimited number. Write him for full particulars and mention American Poultry Journal.

# MISSOURI BRED BARRED ROCKS WIN AT CHICAGO.

The sensation at the great Chicago show was the winning of W. W. Henderson's Barred Rocks. To win in one or two classes with the competition in this show is considered quite an honor, but this year the west came east with a vengeance, and the Missourian went home with a winning that

and Grand Champion male over all Barred Rock males in the show.

The first cockerel and champion male was the best Barred Rock that we have ever had the pleasure of gazing on, and Missouri should feel elated at having a breeder like Judge Henderson within her confines. We have recently visited his farm at Bridgeton, just outside of St. Louis, where we found the grandest lot of Barred Rocks in Amer-

FIRST PRIZE AND GRAND CHAMPION MALE CHICAGO, 1912  
BRED, OWNED AND EXHIBITED BY  
W. W. HENDERSON  
BRIDGETON, MO. ST. LOUIS, COUNTY

is very rarely equaled by an exhibitor at any poultry show. There were 404 Barred Rocks at Chicago from the yards of America's foremost breeders, and when Judge Russell finished his task the Henderson entry had captured the cream of the prizes, to wit, first and second cockerels, second cock, second and third pullets, fifth cockerel bred hen, fourth cockerel bred pullet, third cockerel mated pen, third pullet mated pen

ica. He has fifty acres devoted to Barred Rocks exclusively, and the buildings are of the kind that every poultryman could well pattern after. The winter breeding house is the best and most modern we have seen and accommodates 17 breeding pens. The cockerel house accommodates 190 male birds, each of them in a pen of his own 4x7 feet, which is kept full of birds to be shipped and put in condition for shows. The spring

breeding pens are in a beautiful orchard, and each pen has a half acre of yard with prime apple trees shading the yard in the center. There are 16 of these pens, each with a large, light, well built house and scratching shed. With these conditions and the looks of the birds in these pens it is not to be wondered at that Missouri is producing such fine Barred Rocks. The incubator celler is complete in every detail, with its eight 360-egg incubators, and a fine 150-foot brooder house right off of it, gives the farm ideal facilities for hatching and rearing chicks. This farm is well located, almost on the street car line, and is one of the best equipped poultry farms we have ever had the pleasure of visiting; cleanliness prevails throughout the plant and its owner, Judge Henderson, is one man whom the State of Missouri and the poultry fraternity should be proud of. During the fifteen years that he has been breeding Barred Rocks he has never had a dissatisfied customer. He believes in the policy of refunding the money where there is a complaint and giving everybody a square deal. We would like to have those of our readers who can visit the farm of W. W. Henderson at Bridgeton, Mo., where we are sure you will find one of the best exclusive Barred Rock farms in the country and you will be well repaid for your visit.—John Brinkama.

## A VERY LIBERAL OFFER.

We invite the attention of our readers to the advertisement of the General Purification Co., 625 Pioneer building, Madison, Wis., which will be found on another page of this issue of our paper. This company have originated a new germicide compound which, by laboratory tests and tests in actual farm and poultry yard practice, has destroyed all of the most dangerous kinds of animal bacteria, namely, tuberculosis, cholera, anthrax, and the bacteria which causes roup in poultry.

This wonderful discovery will surely be a boon to mankind, and the manufacturers are so positive of its effectiveness that they are making to the readers of this paper an offer of 10,000 free sample bottles. All they ask is that you give the product a fair trial and report results. Send for your sample at once, as a good germicide is a very useful compound to have in any household. Just address the General Purification Co., 625 Pioneer Building, Madison, Wis., and mention this paper.

Ernest L. Berkholz's Cherry Reds, Willoughby, Ohio, won at Ashtabula, December 12, 1st pen, 2d and 3d cockerels, and 2d display on five entries Reds, largest class in show of 700 birds. Mr. Berkholz has some grand cockerels to offer.—H. H. Courn.

Ira C. Keller, Prospect, Ohio, reports the following winnings at the late New York show: He had six entries in Golden Wyandottes and won 1st and 2d cock, 1st hen, 1st cockerel, 4th pullet and 1st pen. On Silver Wyandottes he won 5th cock and 5th pen.

# UN X L 'ED QUALITY BUFF ORPINGTONS

Best Display; A. P. A. Silver Medal; Color Special; Club Specials; 3 Silver Cups; Special Best Orpington in show (all varieties competing); Medal on Best Cockerel; A. P. A. Diploma; 12 other Specials, 6 firsts and 8 other prizes in two shows, Mineola and Hempstead, L. I., N. Y. At Hempstead Buff Orpingtons were the largest class in the show, and I won three times as many points as any other exhibitor.

## My Buffs Lay as well as Win

**EGGS** YOU CAN'T LOSE IF YOU BUY EGGS OF US—WE GUARANTEE THE FERTILITY **EGGS**  
AND THE QUALITY OF CHICKS HATCHED FROM THEM

# Rhode Island Reds

## ROSE AND SINGLE COMBS

We have bred our Reds to such a point for quality that we feel that we are head and shoulders above other breeders and are going to guarantee the quality of chickens raised from the eggs sold by us. We are going to see that every man that buys eggs of us this year gets his money's worth. We know that we have the grandest matings ever put together in Rhode Island Reds and know that we can guarantee their offspring. We guarantee the offspring from each pen in proportion to the price paid for the eggs. Eggs—\$5, \$10, \$15, \$20 and \$30 per 15, according to the pens they are from. Every pen of Rose Comb headed by a prize winner and nearly all of the Single Comb headed by prize winners, and from stock that is Line Bred. High Class Utility Eggs at \$3 per 15, \$15 per 100 eggs. We do not guarantee the quality of stock from these.

### Chicago, Indianapolis and New York Winners Head Many of the Pens

Besides our winnings we have sold birds that have won from the Atlantic to the Pacific this season, from Canada to the Gulf and in the strongest competition. In placing your order always remember there is one best place to get anything you desire to buy. Send in your order. We will do the rest. At the Indianapolis Show, January 11 to 18, 1913, we showed 5 cocks, winning 1, 2, 3, 4, 5; also 5 cockerels, winning 1, 2, 3, 4, 5. None of these birds were in the Chicago or any other show we have made this season. Where is there another breeder that has enough good birds to show an entirely different lot of birds each time they show. This shows that we raise high-class stock in great numbers. We can mate up some good pens for those that are in need of breeding stock at \$15, \$25, \$35, \$50 and \$75, according to quality. Send us your order; we will mate them up for best results. We have 200 Single Comb cockerels at \$2.50 to \$7.50 each, 20 at \$10. We have 500 Rose Comb cockerels at \$2 to \$7.50 each. 100 at \$10 up.

#### TO WHOM IT MAY CONCERN

This is to certify that we have this day sold to the Buschmann-Pierce Red Farms our entire flock of R. C. Reds, including all our winners and selected breeders, among the winners being 1st cock, 2nd hen and 1st pen at Madison Square Garden, December, 1911, the cock that won 3rd at New York, 1911. Also 1st Nashville and Memphis, 1912, and the 1st Memphis cockerel 1912. This flock is one of the finest in America and, added to their already great flock, will make them unbeatable.

(Signed) OWEN FARMS,

Maurice F. Delano, Mgr.

We have our pens now mated for the egg trade. Book your orders for eggs from the greatest matings ever put together for this breed. OUR BEAUTIFUL CATALOGUE of 64 pages and cover contains many articles on raising and caring for Poultry in large and small flocks. It will also tell you why the Rhode Island Red is the best breed in the World. This catalogue has cost us a great deal to prepare and is too costly to send out promiscuously. We will send this postpaid for 20 cents in cash or stamps. Address all mail to

W. C. PIERCE, GENERAL MANAGER - - BOX 39 - - CARMEL, INDIANA

## THE PERFECTED INCUBATORS BUILT BY "THE MAN WHO KNOWS."

An incubator is an incubator—but there's a big lot of difference in the results given. The difference lies in the way the incubator is made, and the knowledge of the man who does the building.

This is an age of specialists. You naturally expect a man who knows chickens, who has studied them and their development all his life, to know more about hatching than the man who merely makes incubators to sell. A surgeon wouldn't touch an instrument made by a man who knew nothing about surgery. The instrument maker is a specialist, just as much as the surgeon.

The incubator maker must have a complete knowledge of chickens, their organisms, their habits, their natures, if he is going to make the right incubator for you. That explains the remarkable success of the Ideal incubators and brooders built by J. W. Miller, poultry expert and incubator man, of Rockford, Ill.

A few minutes talk with Mr. Miller would convince any poultry man that here is a man who knows his business. And that business, first, last and always is chicken-raising. For over thirty years, long

gets this advantage in quicker deliveries, better building than ever and better results than ever. Miller has added to the former supremacy of his product.

But this poultry expert wasn't satisfied with merely making an incubator. He has gone farther. He has solved the problem of egg production the year round.

The Ideal grain sprouter is a proved success.

It is a well known fact that hens lay more eggs, and more fertile eggs in the spring and summer than any other season. Mr. Miller, following this fact back to its source, found in the craw of the big egg-producers, more green food than any other. These experiments proved to him that green grains, grass, etc., built up the organism of the pullet or hen, enabled the fowl to perform its full functions and produce all the eggs nature provides for.

This is the big profit-making secret which the Ideal grain sprouter has made clear to every poultryman.

To sum it all. Miller, the poultry expert, has solved the problem of hatching most eggs; he has solved the equally great problem of getting the most eggs to hatch.

It will be worth the time of every man interested in making hens pay, to write the J. W. Miller Company, Box 56, Rockford, Ill., and get Mr. Miller's book, "Poul-

Square Garden show and won 1st cock, 2d pen, 5th hen and 5th pullet. His winning 1st cock at Madison Square Garden is worthy of particular attention, as it takes an exceptionally good bird to win 1st prize in any class at this great show. The bird that won 1st was Perfection 3d and his sire was Perfection and he won 1st at the same show two years ago. His grandsire was the cock that headed the 1st prize collection yard at Madison Square Garden three years ago and his brother, Perfection 2d, won second cock at Madison Square Garden last year. This strain of Perfections are all owned, bred and exhibited by Mr. Clark and their consistent winning at Madison Square Garden shows their quality. For further particulars, address G. A. Clark, Seymour, Ind., and mention the American Poultry Journal.

The Rockandotte Farm, Southboro, Mass., made a most remarkable winning at the late Boston show on their White Plymouth Rocks, winning 1st and 3d cock in a class of 21; 1st hen in a class of 29; 1st, 2d and 3d pullet in a class of 44, and 1st pen in a class of 16. They also won the following specials: \$100 challenge cup for champion male, \$10 for best display, \$10 for best 2 cocks, 2 hens, 2 cockerels, 2 pullets and

A flock of 250 Indian Runner Ducks, on the farm of Henry Pile, Freeport, Ill.

before he ever thought of an incubator, his chief purpose and study have been chickens. Mr. Miller knows his subject from every angle. His life has been given to it.

When he finally decided to make incubators every item of this knowledge was applied to the machine. It wasn't some wood, asbestos and tin thrown together, with a lamp inside.

The Ideal is, to all intents, the nature of the mother-hen transferred to an incubator. And all the losses, all the troubles of the old-time methods are removed.

Your correspondent saw the results in a visit to the Miller factory at Rockford. Thousands of Ideal incubators and brooders are in use; tens of thousands of letters have been received from enthusiastic poultry men. Without an exception the Ideal has "made good," far beyond the fondest hopes of the user.

In fact, so great has been the success of the Ideal, so enormous has been the demand for this incubator built by "the man who knows," he has been compelled to move to Rockford from his original location, to get necessary facilities. And now he has them.

Now the best of materials, designed and built right, are used to even greater advantage than ever before. The poultryman

try for Profit." It's free, yet points the way to unapproached profits.

Lester Tompkins, Concord, Mass., the well known breeder of Single and Rose Comb Rhode Island Reds, reports the following winnings: At Madison Square Garden, January, 1913, 1st hen, shape special, 2d pullet, 5th pen in single comb, 1st hen shape special, 3d and 4th cock, 2nd and 3d pullet, 4th and 5th cockerel, and 4th pen rose comb and special for best display. At Boston, January, 1913, Single Comb: Won 1st cock and shape special, 3d cock, 3d and 6th hen, 5th cockerel, 1st, 3d, 4th and 6th pullet, 3d and 4th pen, special for the best three cockerels and three pullets, best display, two best pens, R. I. Red Club of America Cup, State Cup; Rose Comb: Won 5th cock, 3d and 4th hen, 2d pullet, special for best colored wing, tail and hackle female, rose and single comb competing, 3d pen, special for best three males and three females and best display in show, R. I. Red Club of America Cup and State Cup.

G. A. Clark, Seymour, Ind., the well-known breeder of Rose Comb Black Minorcas, made an entry at the late Madison

pen, \$10 for champion male, \$10 for champion female, \$5 for 3 best cockerels and 3 best pullets, \$2 for best headed male.

At the late Madison Square Garden show this farm made only a small entry of White Wyandottes and won 4th cock and 2d pen in a class of 18 pens. This farm and stock is too well known to the readers of American Poultry Journal to need any further comment, but will ask our readers to send for their catalogue and mention American Poultry Journal.

Mr. W. F. Uhle, Attica, Ohio, handled the secretaryship of the Attica Poultry Show, January 1 to 4, to the entire satisfaction of the association. Mr. Uhle also exhibited his Single Comb Black Orpingtons, winning 1st pullet, score 94; 2d and 3d hen, score 94 and 93½; and second cockerel, score 93½.—H. H. Coburn.

O. L. King, Rockford, Ill., the well known Barred Plymouth Rock breeder, reports the following winnings at the big Rockford show: 2nd, 3d cocks, 1st, 2d, 4th cockerels, 1st, 2d hens, 1st, 2d, 3d pullets, 1st pen, 1st pen mated for cockerels, 1st pen mated for pullets. This winning made in a very strong class. If you want something good in breeding stock or eggs Mr. King can supply them.

**GOLDEN AND SILVER** At Cleveland, January 20 to 27, 1913, won on Golden—second and third cockerel; second, fourth and fifth pullet; first pen; on Silvers—third pullet; second pen. Will have four Silver and three Golden pens mated for egg trade. First Silver pen headed by winner at Crystal Palace, London, England, in 1912. Write for mating list.

**\$6.00**

WEST CHARLESTON, N. H.,  
May 1, 1912.

E. W. PHILO,  
Elmira, N. Y.

DEAR SIR: Would like to report on my hatch from the Cycle Hatcher of forty-two chicks from forty-three eggs and it has made quite an impression in favor of the Cycle Hatcher in this vicinity. I beg to remain

Yours very truly,  
D. THEO. HOFFMAN.

February 12, 1912.

1521 Dimond Ave.,  
So. PASADENA, CAL.

CYCLE HATCHER CO.,  
Elmira, N. Y.

GENTLEMEN: Will you please send me your free books? I borrowed one of your incubators last fall and hatched 42 strong, healthy chicks out of 42 eggs; that pleased me so well I will dispose of my other machines, and use the Cycle altogether from now on.

MRS. JASPER BRYNRE.

WRAY, COLO.

CYCLE HATCHER CO.,  
Elmira, N. Y.

GENTLEMEN: I have one of your Cycle Hatchers and like it very much. I hatched 45 chickens from 50 eggs. I call that pretty good. I think that these incubator chickens are stronger than those hatched in other incubators, because the eggs are cooled in the natural way and applies the heat to the chicken like the mother hen. I am,

Sincerely yours,  
S. BARR GROVES, JR.

We hatched this number of chickens last year in our own factory, and they were sold for \$14,500, and shipped to nearly every state in the Union. In addition to these, several thousand were hatched for raising in our own yards. We make Cycle machines for our own use and make large profits by using them.

When a manufacturer can make larger profits by using his own goods, it is the very best guarantee that others can make more by using the same goods.

Some machines are made to sell! Ours are made to use and we use them and others who will use them can make large profits just as we do. You can start our way without **having a fortune** to start with. Our business has been built up without any borrowed capital.

Our chickens are hatched right and are strong, that's the reason they grow and are profitable.

While first of all, we are manufacturers of incubators and poultry supplies, our manufacturing is founded upon the years of practical and successful poultry keeping experience of Mr. E. W. Philo, probably the best known practical poultryman of America.

Every article of our manufacture is the result of years of study and experiment—and must prove of actual, practical value, that will make a profitable investment before we will offer it to the buying public.

Our experimental work is done in our own poultry yards—and here we meet almost every kind of poultry problem. We have undoubtedly had many problems similar to yours, and you are offered the benefit of our experience.

Write for a free copy of poultry book and catalogue ---"Poultry Profits." It will show you new possibilities in poultry keeping, for pleasure or profit.

**50-EGG and CHICK  
BROODER-HATCHER**

**\$8.00**

ETNA, KY.,  
Jan. 22, 1912.

CYCLE HATCHER CO.,  
Elmira, N. Y.

GENTLEMEN: I have used your Cycle Hatcher three years. Set it six times one year, and four times the other two years. Once I got forty-two chicks out of forty-nine eggs, twice forty-six chicks out of the same number, but the most of the time I got forty-four and forty-five chickens. I think there is no other incubator that will beat it. Please send me prices of your incubator supplies, and oblige,

Respectfully,  
LILLY HARGIS.

FERNWOOD, OHIO,  
May 7, 1912.

E. W. PHILO,  
Elmira, N. Y.

DEAR SIR: We have had a hatch in the Cycle Hatcher purchased from you a few weeks ago, and had forty-two out of fifty eggs. We thought that a good hatch from farm range chickens. Have it set again, and are watching for results.

Yours truly,  
MRS. BELL S. ELLIOT.

SMYRNA, WASH.,  
Jan. 25, 1912.  
CYCLE HATCHER CO.,  
Elmira, N. Y.

GENTLEMEN: Your brooder Hatcher is a dandy; just completed first hatch, getting a chick from every fertile egg.

Yours truly,  
BURT S. DIMMICK.

## RICE'S SINGLE COMB WHITE

## LEGHORNS

Their past record of first prize winnings at Madison Square Garden and other leading American shows for the past seventeen years must convince you of the fact that they are bred to win, and do it in the strongest competition.

They have also a world-wide reputation as **HEAVY LAYERS** of large white eggs and can and will make money for you.

I have several hundred choice yearling hens and early hatched pullets at reasonable prices, with strong vigorous cockerels to mate with them.

I will select and mate breeding pens both for exhibition and utility purposes which will give you the desired results.

I am better prepared than ever to furnish **EGGS FOR HATCHING** from strong healthy yearlings and two-year-old hens which will produce strong chicks which will live and grow.

Write for list of both exhibition and utility matings and description of same.

MORGAN PARK, ILL.

### CELEBRATES HIS THIRTY-SIXTH YEAR.

The year 1913 marks George H. Stahl's thirty-sixth year in the incubator business, and the well known Quincy, Ill., manufacturer is celebrating the event by putting out what he says is his crowning achievement.

It was in 1877 that Mr. Stahl—after long experimenting and patient operation—

sior is the best machine I have ever built, and I am glad to be able to present it to the people in this my thirty-sixth year in the incubator business. I am glad, too, that I can offer this machine at the beginning of what I believe is going to be the greatest year in incubator history. Conditions are right, at this time, for the owner of an incubator, and I am sure the man or woman who operates an Excelsior in 1913 will make a very fine profit."

Mr. Stahl will be glad to send his free

FIRST PEN COCKEREL AT NATIONAL SINGLE-COMB WHITE LEGHORN CLUB SHOW, ST. LOUIS, 1912 EUGENE C. SMITH, 317 GALENA BOULEVARD, AURORA, ILLINOIS

Mr. Smith's Booklet for 1913 is one of the handsomest we have ever seen. It will be sent free by addressing him as above.

obtained his first incubator patent. He was, in fact, the incubator pioneer, the man who first made hatching on a large scale a real success.

Since 1877 Mr. Stahl has been given more than fifty patents by the United States Government, and he makes the assertion that practically all incubator manufacture is based upon the ideas exploited in those early patents of his.

Mr. Stahl recently said: "My new Excel-

catalogue, describing incubators, brooders and supplies, to anyone asking for it.

We have been advised by J. S. Brady, Parker's Landing, Pa., the White Orpington specialist, that his breeding pens are all mated up and are virtually the same as they were last year, and his eggs are running 80 per cent fertile. On account of sickness in Mr. Brady's family, he has not been able to make any shows this winter, which has

enabled him to mate up his breeding yards earlier than usual, and his birds go into their breeding yards with all their vitality and strength as they have not been exposed nor worn out by show preparations. Mr. Brady also advises that the only change in his matings from last year will be the 1st and 2nd cockerel in the Pittsburgh show last winter, which Mr. Brady purchased from the display coop of Mr. M. Lindner, of England, in the Madison Square Garden show, and which were kept in reserve last winter, will be used alternately this winter in yard No. 1, with English Lord and White Chester. The two imported birds, which formerly headed this yard, will be used three days in the week, and the young birds four days. The young birds are of very high quality, and were never shown but once, and were pronounced by all the judges in the Pittsburgh show to be two birds possessing more high breeding qualities than any birds seen last year. Since they were shown they have had good care and have developed very deep, heavy breasts, broad backs, deep red eyes, heavy shanks of the right length and, going into their breeding yard with all their vitality, they should prove very valuable sires. Eggs from this yard, \$15 for fifteen. See ad on another page.

### THE KELLERSTRASS FARM.

The Kellerstrass Poultry Farm, Kansas City, Mo., is known from one end of the globe to the other as breeders of the Crystal White Orpingtons. This farm is celebrated for the high quality of stock they produce, and there is no question but what they sell more high priced eggs and stock than any other farm in the country. They do not sell low quality stock at any price. They have mated up an exceptionally fine lot of pens for the egg trade this season and they are now booking orders. They also have some choice males to spare that will improve any flock. Remember this farm does not want your money if they cannot satisfy you in quality. They have built up their reputation by satisfying their customers in every instance, and they can and will satisfy you. Write for their catalogue and mention A. P. J.

Tom Mendenhall, Ridgefarm, Ill., exhibited a few of his S. C. Rhode Island Reds at the late Terre Haute, Ind., show and won 1st pen, 1st and 2d pullet, 2d cockerel and sweepstakes prize and silver cups. He reports demand good for cockerels and prospects good for a heavy egg trade. Write him for what you want.

### SILVER SPANGLED HAMBURG

Quality the best. Prices reasonable.

## S.C. BROWN LEGHORNS

ONLY THE BEST — PRIZE WINNERS

The kind of birds the fancier loves to raise. I won 1st on cockerel, 3d on cock, at the Boston show, 1907; 2d and 5th cockerel, 3d and 5th cock, 3d and 6th hen, Boston, 1908; 1st on cock, 3d on pullet, at Madison Square Garden Show, 1905; 1st on cock, 2d and 3d on cockerel, 1st on pullet, 1st on pen, and 10 special premiums at Chicago show, 1905, winning fifteen prizes on eight birds. At Chicago, December 1909: 1st and 2d cock, 1st and 5th cockerel. First cock, 1st cockerel at the Great Chicago Show, 1910. Chicago, 1911, 1st cockerel, 2d cock. A choice lot of show and breeding stock. Circular showing my winnings free. Write now. Address

**W. H. WIEBKE Box P 348 FORT WAYNE, IND.**

## COLBY S. C. REDS

At Cleveland, January 20 to 27, 1913, I won 2 Cockerel, 1—2 Pen. Only made four entries. One of the hottest classes of Reds ever shown at Cleveland. Will have 8 pens mated for egg trade. Book egg orders early. Eggs, \$3, \$5 and \$10 per 15. Send for mating list.

**E. W. COLBY :- R. F. D. No. 2 :- WILLOUGHBY, OHIO**

## RICH'S ROSE COMB REDS

Again they are the winners at the leading shows of the middle west—the best proof that we are able to keep up with the marvelous progress of this noted breed. **Three Firsts**, in addition to **Silver Cup** and many other prizes were awarded our birds at the great Des Moines show this season. At Cedar Rapids, the classy show next to Chicago, we won **FOUR** out of six firsts. Remember that we have made as great winnings at different large shows repeatedly during the past 5 years and that we raised all These Winners. If you want to win as we have you should place your order with us for Eggs and Baby Chicks

**18 PENS MATED FOR 1913**

By far the best we ever mated. Send today for our Mating List giving prices. If you do not have one of our fine catalogues we will send you one free. Do you want to know how to build Brooders, Colony and Laying Houses with complete plans, how to hatch and raise chicks, how to conquer roup, etc., write for particulars, or send 35c for pamphlet worth many times the price.

**D. W. RICH : 513 Vine Street : MT. PLEASANT, IOWA**

## WEJA FARM S. C. W. LEGHORN WINNERS

**At the Great Cleveland, Ohio, Show,  
January 6 to 11, 1913**

The Cleveland Poultry Breeders' Association. In a very strong class of 150 birds, we won 1st, 2d and 3d cock; 1st, 2d and 3d hen; 3d cockerel; 1st pullet; 1st and 2d pen; silver cup for best display. This together with our 1912 winnings prove beyond a doubt that our LEGHORNS are the best in the middle west. If you are in the market for stock either Exhibition or Utility let us quote you prices, we have over 2,000 birds to select from. We keep no other variety, therefore our whole time and attention is devoted to the betterment of the S. C. White Leghorn, the world's best EGG MACHINE. Having acquired all of the stock of D. D. Whitaker, Ashtabula, Ohio, also all the stock of Harmon Bradshaw, Lebanon, Indiana, as well as the stock of P. J. Thompson, Youngstown, Ohio; also the services of both Messrs. Whitaker and Bradshaw, we are prepared and have the STOCK to deliver the GOODS.

130 acres devoted EXCLUSIVELY to S. C. WHITE LEGHORNS. Exhibition Matings, \$5.00 to \$15.00 for 15 EGGS. Utility Matings: \$2.00, 15 EGGS; \$3.00, 30 EGGS; \$8.00, 100 EGGS. Baby Chicks, 15 cents and up. Mating list now ready. Send for free copy.

SUPERINTENDENTS**

**NORTHFIELD, OHIO**

## THE NEW FERRIS LEGHORN CATALOG.

We have just received the new 132 page catalog of Ferris Improved White Leghorns, and it is the finest catalog that has ever been published by any White Leghorn breeder.

Not only does it describe the famous Ferris Improved White Leghorns, but it contains more information of great value to every breeder of Leghorns than many books that are sold at good prices. The methods of feeding, of breeding, and of housing that are responsible for the remarkable quality of Ferris Leghorns, are described in detail and will help many breeders to greater success. A new style of poultry house has been developed by Mr. Ferris that is sure to be widely used in the northern states, for it is the most suc-

cessful house for winter egg production that has ever been devised, and the catalog describes it fully.

The illustrations deserve mention also and show the modern character of the farm and the splendid quality of the stock. The quality of eggs, chicks and stock, and the generous guarantee given every purchaser, are explained in detail, as are the methods that have been followed in building, laying and exhibition qualities.

Mr. Ferris is in position to furnish winners for the largest shows, for his stock is right up to the standard in every particular. What is still more important, all his breeders are trapped, and have been for 12 years, so that Ferris Leghorns are unequalled egg producers. Special attention has been given to producing winter layers.

This catalog has cost several thousand dollars, and the information it contains makes it a bargain at a dollar a copy, but

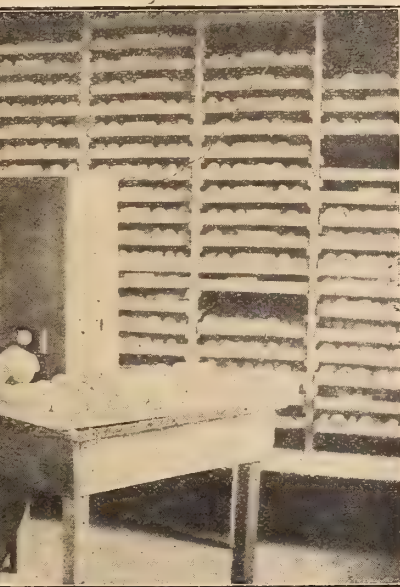

championship Red male of the show, both combs competing. They also won \$25.00 silver cup offered by the Rhode Island Red Club of America for best display of Rose Combs. This winning at the annual club meeting of the Rhode Island Red Club under Lester Tompkins, judge, places their strain among the foremost breeders of Rose Combs in the country.

S. E. Hall, Route 34, Laomi, Ill., informs us that he will sell a few White and Fawn Indian Runner ducks and that the price of eggs will be \$5.00 per setting. Write Mr. Hall for prices on stock; you will find him reliable in his dealings.

J. L. Bales, Springfield, Ill., won four firsts and three seconds in the recent Illinois State Show on Rose Comb Black Minorcas. When in need of stock or eggs send to Mr. Bales for prices; he is reliable.

Address George B. Ferris, 905 Union avenue, Grand Rapids, Mich.

At the great poultry exposition of Pittsburgh, Jan. 13 to 18, 1913, the Rhode Island Reds ranked second in numbers, there being 344 Reds in the class. Simmons & Crittenden, Geneva, Ohio, made a great win on their Rose Comb Red as follows: 1st, 3d and 5th cock, 1st cockerel, 2d, 3d and 4th hen and 5th pullet. Their 1st cock was one of the best Reds seen this year. He won both shape and color specials, and

Testing Eggs in the Great Hatching Plant of the Co-operative Breeding and Hatching Co., Tiro, Ohio.

cessful house for winter egg production that has ever been devised, and the catalog describes it fully.

## WHITE PLYMOUTH ROCKS

WINNERS AT GUELPH, ONTARIO, DECEMBER, 1912

Canada's Greatest Show is the "Ontario" held at Guelph. My birds have won there for years and their best record was made this season by taking all first prizes but one and about all specials. Size and vigor are a feature of this line that have been bred and exhibited by me for many years. Special prizes now for choice breeding or the highest class of exhibition stock. Let me know your wants and send for my circulars. Eggs for hatching. Satisfaction assured.

J. L. BROWN : BOX A : SEAFORTH, ONTARIO

## The Axford

Established 1875. Round and most sanitary of all incubators, easy to run, always true. Making no fires, but extra fine chicks. The older it is, the better it works, SURE! If you cannot afford to buy meat, raise poultry. Mention A. P. J. when writing.

F. W. AXFORD COMPANY  
735 and 737 E. 45th Street Chicago, Ill.

## The Improved Champion Leg Band

25 PAT. APPLIED FOR

Aluminum only; two sizes; adjustable to fit any fowl. Held by double lock. Can't lose off. Postpaid 12-15c; 25-20c; 50-35c; 100-60c. Initials 10c per 100 extra. 50 or less 5c. Also Pigeon Bands.

T. CADWALLADER, Box 1302 Salem, Ohio

## BABY CHICKS AND EGGS

Orpingtons; Single, and Rose Comb, White, Buff, Black and Single Comb White Leghorns. Orpington eggs, \$3. per 15; \$12. per 100. Chicks \$25. per 100.

J. S. HAUPT'S FARM - BOX 96 - EASTON, PA.

## Day Olds

White Indian Runner ducklings, 50c each Single Comb White Leghorn chicks, 15c each Fancy hatching eggs, half above prices. Safe arrival and fertility guaranteed.

Our White Runners are pure line bred, and most prolific layers known. We have four generations in our yards and know what they produce. Guaranteed never one feather or egg but white. They have brought home many prizes. Have won first wherever shown. They paid us \$50.00 each last year. It pays to start with good ones.

Our Leghorns have 205 acres of alfalfa and fields interspersed with spring branches and shade to roam over. No male in our breeding yards whose mother has not produced 200 eggs in one year. Incidentally we have a box of blue ribbons they have won. We raised over 95% ducklings hatched and over 90% Leghorn chicks last year. This speaks more than pages as to health and vitality of our flocks. Booklet telling our way to all customers—now for sale. It contains no wonderful secret. But is a simple work-a-day outline that has proven satisfactory with us. Order direct from this ad. Money back without argument if you are not satisfied. Catalog upon request.

JAS. R. SYNDER  
BOX O. FRAZER, MO.

## SINGLE COMB WHITE ORPINGTONS

These birds were raised from premier stock and their fine ancestry shows in their appearance. We bought a larger farm and will use it solely for the purpose of raising fine poultry. Our finest birds are being used for breeding purposes and for that reason we are not represented in this season's shows. However we have some excellent stock ready for immediate sale at low prices. Eggs from ten pens. Prices \$5 up per fifteen.

## WHITE INDIAN RUNNER DUCKS

These birds are now all the rage. Winners at Hagerstown, Md., Wheeling, W. Va., Pittsburgh, Pa., Cleveland, Ohio, etc. It is easy to raise prize winners if you start with good stock. You can duplicate our success. Write for prices on birds. They are so low we don't like to publish them. Eggs \$5.00 up per twelve. Stock shipped on approval. Satisfaction guaranteed or money refunded. Write for mating list.

WALNUT HILL FARM

**A POSTAL WILL BRING YOU OUR FREE CHICKLET CATALOGUE**

Chicks from 10 cts. up. Shipments guaranteed to reach destination safely. All dead chicks replaced. Book your order now. Our equipment includes the highest priced machines on the market and, backed by our twenty years' experience in hatching and breeding, enables us to furnish you chicks that are well hatched, vigorous, strong and healthy. Hundreds of satisfied customers. Poorly hatched chicks prove expensive items even though they are given to you. Start right by sending for our chicklet catalogue today.

### Our Show Record Includes Chicago, New York and Indianapolis Winnings

Many first prizes have been won by our birds at these National Shows in the past. Our breeders are placed in condition for producing strong, healthy, fertile eggs by December 1, consequently for the present we will not exhibit, but can furnish Baby Chicks from our best exhibition matings that will grow into winners for you. Our Utility Chicks are well hatched, and we can quote you extremely low prices on them. Be sure and get our catalogue.

# SAVE THE BABIES

Reduce your loss of little Chicks by feeding them with a

## Simplicity Baby Chick Feeder

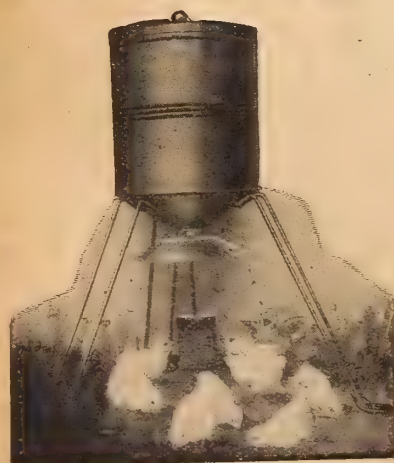

The greatest little contrivance yet invented to take the place of the Cluck in finding food for the little ones; and what's more, they don't have to wait until the hen is successful in finding something for them, neither must they wait for the man with the feed, get weak and lose vitality owing to proper food at the proper time.

## The Simplicity Baby Chick Feeder

is always on the job. It works like a charm, feeds the chicks nice, fresh, clean feed whenever they want it and just enough at a time with just enough exercise to keep them in good condition. Try one now and get more when your chicks start to hatch.

Price \$1.00 each. \$5.00 for a half dozen

Simplex Supply House : Pontiac Bldg. : Chicago, Ill.

## SEND YOUR EGGS BY PARCEL POST

THE TUBULAR EGG CASE (patent applied for) meets the Government Parcel Post Regulation. Is LIGHT and COMPACT. Agents wanted everywhere. Big money to live representatives. Made in sizes 1 to 5 dozen. Special prices in quantities. Small orders, 15 for \$1.50; 8 for \$1.00. Send 25c for sample.

Write to Dept. 9

TUBULAR EGG CASE CO.

Long Bldg., Kansas City, Mo.

## ARE YOU GETTING AHEAD?

There is no reason why you should go to the dogs in the poultry business, if you start with the right breed and the right strain. The S. C. White Orpington is conceded the best breed in the world, and there is no better strain than the ALTAMONT Strain.

We win at all the leading shows, and have never failed in an egg laying contest.

We are getting orders for Stocken eggs from all parts of the country and Canada. Write for catalogue, with show record. Prices cut one-third. We breed White Orpingtons exclusively.

**ALTAMONT POULTRY FARM**  
R. R. 5, COLFAX, IOWA

First Madison Square Cockerel

## Royal Blue Orpingtons

1st Madison Square cockerel, Crystal Palace winners. Barred Rocks in the past four years, my males have taken first prizes at New York, Boston, Baltimore, Buffalo, Philadelphia, Guelph, Ottawa, Canada and other shows, and have three times repeated first prizes at some of above shows.

Haldie Nicholson :: Leominster, Massachusetts

## Ideal-Hover

## NEAT--HANDY--SAFE--DURABLE

Just set on the floor anywhere, light the lamp and in 20 minutes you have as good a chick Mother as money can buy. Pick it up and carry any place with lamp burning. **HEATER:** Our Duplex or Double Drum hot air Heater will produce 15 per cent more heat from the same amount of oil than any single drum Heater used in others. The Des Moines Seed Co., Des Moines, Iowa wrote us that the Ideal heat up the best of any Hover they had ever experimented with. **LAMP:** Our lamp will never cause trouble by smoking. Oil cannot become overheated as oil fount is on outside of Lampbox feeding oil to wick just as needed and just enough to keep it covered all the time. Lamp flame always in plain view. Lamp removed or pushed in place with one hand. The Ideal is 24 inches in Diameter, all metal but Double Curtain, has no Hot Center, and will brood 100 chicks. **GUARANTEE:** We will refund money if not entirely satisfactory. **SPECIAL NOTICE:** On account of Galvanized Iron and other products used in its Mfg., advancing in price, we have put the price to \$6.00 freight paid on two or more East of Rockies; \$7 freight paid on 3 or more west of Rockies. It is still from \$1 to \$2.50 cheaper than others, and the price will never be changed again, unless something extraordinary happens. Upon receipt of \$1 we will ship by Express C. O. D. to be examined. Freight allowed on two or more. Don't buy another Hover until you see our illustrated Circular; we can interest you. Don't fail to mention this paper.

TREMONT CITY, OHIO.

## READ THIS

# Every Poultryman Should Grow His Own Feed

It's the secret of profitable poultry raising. Plant EGYPTIAN WHEAT, the new grain from India. It's the greatest grain known for chicks or laying hens. Good for other stock; makes good flour. MAKES 100 to 200 BUSHELS PER ACRE; grow enough for a large flock on a small plot. Easily harvested by hand or machinery. Plant Spring or Summer in rows; large yields made by planting from February to July. Get a start of this wonderful new grain. Get more eggs, raise more chicks and get all the profit. I will send large package choice seed (about 5,000 grains) for only 25c postpaid, enough to plant one acre for \$1; five acres for \$3; ten acres for \$5; (all prepaid.)

The Seven Oak Seed-Breeding Farm : Carlton, Tex.

## BUFF ORPINGTONS

I breed egg laying prize winners. During February I am making a SPECIAL PRICE on COCKERELS and BREEDING PENS. Remember the prices are GREATLY REDUCED. Will have four GRAND PENS mated for the egg trade. Write your wants. I can please you.

CARL E. ROGERS :: R. D. 2 :: PAINSVILLE, OHIO

## A PERSONAL LETTER

Will tell you much more about my

## S.C. Buff Orpingtons

than an expensive catalogue. Let me write it to you. **Leading layers** among the Orpingtons at the Storrs' Egg-Laying Contest.

## ZENOLEUM

## KILLS LICE AND MITES

DISINFECTS the Hen House, Brooder and Incubator. CURES Roup, Scaleg Leg, Canker, Cholera. PREVENTS White Diarrhoea

Endorsed by 50 Experiment Stations

Every person interested in the causes and symptoms of all poultry diseases should read CHICKEN CHAT—Free if you ask for it. It names diseases, and suggests methods for curing them, and offers ideas for preventing contagion and infection.

The most eminent poultry authorities in the world have contributed their stories to this book. An interesting report is made by the Ontario Government poultry expert, Professor Graham, in regard to his successful handling of incubators, and the prevention of white diarrhoea in his hatcheries.

# CLASSIFIED ADS

**UNDER this heading ads will be inserted for seven cents per word each month for less than three months, and five cents per word each insertion for three months or longer.** Changes in copy allowed every three months. Numbers and initials count as words. All ads will be inserted under classified headings. No ads accepted at less than an average of sixty cents per insertion. Terms, cash with each ad. Count the words carefully to avoid delay in publishing. Write your copy plainly, as upon this the correctness of your ad largely depends. When placing your ads remember that advertisers using Classified Ads get better returns from AMERICAN POULTRY JOURNAL than from any other poultry journal—none excepted. On writing any of these advertisers mention A. P. J. All copy for Classified Ads must reach us by the 17th of month preceding date of issue.

E. A. Pierce, Superintendent, Care Buschmann-Pierce Red Farms, Carmel, Indiana

Miller's Famous Hen & Chick Food  
Now only \$1.85 per 100 lbs.

This food is a mixture of choice grains and seeds, both cracked and whole, with a slight mixture of crushed shell, grit and just enough chemical stimulant to give health and vigor to small and growing chicks and laying hens. It is a great tonic as well as a developer and egg producer. It is now the cheapest as well as the best feed of its kind on the market. The large quantities I manufacture and sell enable me to furnish you at per 100-pound bag, \$1.85. Order now. It's good any time of the year, but most specially profitable just before and during breeding season.

B. E. Miller :: Carlton, Texas

**7c. PER DOZEN** From hens kept according to our free feeding plan in our Improved Houses, costing complete from \$12.50 up. Write for catalog Portable Poultry Houses.

Owen Co. : Smith Street : Allegan, Mich.

## Hatch Chicks that Live

that's what I guarantee the **Paradise Hatchery** to do, and hatch every hatchable egg besides. Hundreds of thousands of chicks are lost every year through inadequate methods of hatching. Thousands of poultry raisers everywhere have discarded "old fashioned" hen-setting ways because they run out of patience. Doubtless Job made a successful hatching chickens the "old fashioned" way, but Job had a cinch on the patience part of the business—few of you ever met him. Therefore, not having a satisfactory regulator for Nature's incubator, poultry raisers have as a last resort, tried the artificial "Hatch-all" only to be disappointed. Yes, they were cleverly advertised and the figures appeared splendidly in favor of the incubator, but after a thorough test "things are not what they seem," and the operator wishes he might be little again, and his mother would come and tuck him in. Poultry raisers who have had this "terrible experience" have accepted the old adage, "Don't count your chickens before they are hatched" for the truth, and nothing but the truth, until the **Paradise Hatchery** appeared on the scene. Since its introduction this "old saying" is considered obsolete. Poultry raisers in all parts of the U. S. and Foreign Countries, are adopting the **Paradise Way** because it solves the problem of successful chicken hatching. Friend Reader, does this mean any thing to you? Remember what Noah said, "Don't Be a Back Number." Get in line with the successful—get a **Paradise**; start the hatching season of 1913 right—You'll have more profit to contend with. If you only intend to hatch one chicken, my free circular will mean much to you. Remember: the pleasure and profit way of chicken hatching via the **Paradise Way**. "You'll like it."

ELMER S. WEST, - BOX 97, - EWING, KY

## COLUMBAIN WYANDOTTES

Our birds have been the very highest winners at New York, Boston and Chicago for our customers as well as, for ourselves, including one of the first prize winners at the last Chicago show. Our birds are grand in lace hackles and tail coverts with white backs. We can please you. J. FRANK VAN ALSTYNE, Niverville, N. Y.

## S. C. Brown Leghorns

First prize winners at Madison Square, New York, Chicago, Pittsburg, Cleveland, Buffalo and Philadelphia. My prices are reasonable. Write for circular.

Frank Schellang, R. 8, Erie, Pennsylvania

## White Rocks

Koons' White Rocks again prove their winning quality at the Philadelphia show. 1st cockerel, 1st pullet, 2d hen, 4th cock on five entries. Pullet won special for best pullet in show, all varieties competing. Eggs after February 1st, all headed by males having won first prizes, \$10 per setting.

Koons' Farms : Treichlers, Pennsylvania

## SKINNER'S STANDARD WHITE WYANDOTTES

Have been winners at the leading Mid-West shows for the past eight years. A grand lot of birds for sale. Mention American Poultry Journal when writing.

F. E. SKINNER : : : SANDWICH, ILLINOIS

## White Plymouth Rocks

My birds were one of the leading winners at the great Chicago show, Dec., 1910. Can supply winners for any show in the country. Write now for prices. Write for circular. Egg orders booked now. Mention A. P. J. when writing.

J. H. Trobaugh - Box 253 - Delphi, Indiana

## BARRED ROCKS

First cockerel and five specials at Philadelphia, Pa. First pullet, second hen and second pen at Camden, N. J. Strong, vigorous stock for sale. Eggs from choice pens.

MAPLE GRANGE POULTRY YARD  
S. M. GOUCHER : : : MOORESTOWN, N. J.

## White Indian Runner Ducks

That breed true to type, color and station. In taking up a new breed one naturally wants to buy their stock and eggs from "headquarters" and from stock that you know is mated and bred right. Our White Runners have won at New York, Hagerstown, Indianapolis and Great Appalachian Exposition. We have sold the winners for nearly every show of note the past season. Our yards this season contain the best White Indian Runners in the world. Eggs, \$8 per 12, \$15 per 24.

Mrs. U. R. Fishel, Box R, Hope, Indiana

## Bermuda Grass

The finest grass in the world for LAWNS, pasture or hay. Makes the prettiest lawn, pasture or poultry range. It is the most nutritious and beneficial grass for all kinds of stock or poultry. One acre in Bermuda grass equals ten to sixteen acres in native grass. It will thrive on any soil, poor or rich. The roughest hills and brakes can be made the most valuable by planting to Bermuda grass. One planting makes permanent sod and stand indefinitely. Plant from February to July. One-fourth pound will plant good sized lawn, five pounds will plant an acre. I can furnish choice cleaned seed at one-fourth pound, 50c; pound, \$1.25; 10 pounds, \$10; all prepaid. Order at once; supply limited.

B. E. MILLER : : CARLTON, TEXAS

# Fire-Proof And Insurable

**EVERY INCUBATING DEVICE** that we manufacture and offer for sale is built in strict conformity with the "Rules and Requirements" of the NATIONAL BOARD OF FIRE UNDERWRITERS. This is true of Cyphers Lamp-heated Incubators, of Cyphers Gas-heated Incubators, of Cyphers Electric Incubators and of the **CYPHERS MAMMOTH INCUBATORS**. Do not over look this **BIG FACT**—it is **HIGHLY IMPORTANT!** It means that the construction of these machines, as regards fire risk, has been **CRITICALLY EXAMINED** and **OFFICIALLY APPROVED** by expert engineers representing practically every standard old-line fire insurance company doing business in the United States and Canada.

6,000 Hen Egg Capacity Cyphers Mammoth Incubator on White House Poultry Farm, Oskar Frowein, Proprietor, Center Moriches, Long Island, N. Y.

## "Tried One, Then Ordered Another."

LANGE POULTRY FARM.

Ernest Lange, Proprietor.

Breeders of Barred Plymouth Rocks and S. C. White Leghorns.  
Hatching Eggs. Day-Old Chicks.

Moriches, N. Y., January 8, 1912.

Cyphers Incubator Co., Buffalo, N. Y.—

In placing my order with you for another Cyphers Mammoth, 6,000-egg capacity, I am glad to be able to say that I was so successful and am so well pleased with the 4,800-egg Mammoth you installed on my plant a year ago that I decided to enlarge the hatching capacity by ordering another one of these big machines. I have found that there is a saving of about 60 per cent. in fuel—also there is no danger of fire and no lamp fumes in the room.

To any one who is interested in Mammoth Incubators I heartily recommend the Cyphers, and extend a cordial invitation to come and inspect my plant and see the Cyphers Mammoth in operation. My hatches with this machine last season were wonderfully good—about 90 per cent. of the fertile eggs coming out, producing strong, healthy chicks, full of vitality. On account of simplicity of construction any person of ordinary intelligence can run it. And it requires much less labor and attention than I formerly was compelled to give to the incubating process.

ERNEST LANGE.

## WHY THE CYPHERS MAMMOTHS SELL

"Has Used His Three Years."

WHITE HOUSE POULTRY FARM

Breeders of Barred and White Plymouth Rocks and S. C. White Leghorns.

Center Moriches, L. I., N. Y. Oskar Frowein, Prop.

Center Moriches, January 7, 1912.

Cyphers Incubator Co., Buffalo, N. Y.—

I am using our Cyphers Mammoth Incubator for the third season and am glad to say that I am perfectly satisfied with it in every way. The percentage of chicks hatched from the fertile eggs is fully as good as we formerly obtained from the lamp-heated machines, if not better, and my expenses of operation are just one-third less since I started to use the Mammoth. The chicks hatched are big and lively—are healthy and grow fast. The biggest saving is in fuel. We average to save two-thirds on fuel, as compared with lamp-heated machines. I can truthfully recommend the Cyphers Mammoth Incubator to anyone who may wish to inquire. With best wishes for the New Year,

WHITE HOUSE POULTRY FARM,  
Oskar Frowein, Proprietor.

## U. R. Fishel Installs 10,400 Egg Machine.

FISHELTON

U. R. Fishel, Proprietor.

Home of "The Best In The World Strain" White Plymouth Rocks.  
The Largest Specialty Poultry Farm in the World

Hope, Ind., January 9, 1912.

Cyphers Incubator Co., Buffalo, N. Y.—

After carefully investigating all mammoth incubators I became convinced that the Cyphers Mammoth was the one for me to buy, therefore I placed my order with you for a 10,400-egg capacity mammoth incubator and am pleased to say that you lost no time in installing this machine, which I am to use this season. I wanted to write you and tell you how well pleased I am with the general appearance of the Cyphers Mammoth. I feel confident it will hatch just as good if not better than the individual Cyphers Incubators, and if it does that I certainly will be delighted with it. Just took off 116 chicks—good strong ones—from 122 fertile eggs in one of my lamp-heated Cyphers.

One point I like especially about the Cyphers Mammoth as compared with the other makes, is its general appearance, for we want nothing at Fishelton but that which is the very best, and I feel that we are keeping up to the standard by installing this Mammoth Cyphers Incubator. Thanking you for the prompt manner in which you handled my order for the Mammoth, I remain,

U. R. FISHEL.

## ORDERS FILLED PROMPTLY:

eggs. Are shipped knock-down in panels at low freight rates.

Are suitable to use successfully in an ordinary incubator house or cellar above or below ground, or in any large room or apartment. Can be taken down on short notice without injury and moved to another location. If you are interested in custom hatching, or are selling day-old chicks, or are operating or planning to operate a large, practical plant of any kind, write today for our SPECIAL 20-PAGE CIRCULAR, showing pictures of and fully describing the latest Cyphers Mammoth. Prices and full information on request. Address home offices, or nearest branch house.

# Success With Early Chicks

**WHAT TO DO** with the first chicks of the season—where to keep them and how to make sure of raising them successfully? This has been one of the hardest problems for poultry raisers to solve. It is just here that the **PARADISE BROODER** comes into profitable use—and completely answers that important question. This “best of all” indoor brooders (see illustration) is not new and untried. We are not offering an “experiment.” These brooders have been on the market and in successful use five years. Are sold in one, two, three or four sections—each section measuring 3x7 feet and having two separate compartments. Following is sample evidence of the kind of work they do.

## HOW WELL PARADISE BROODERS PLEASE

### Tried One Section—Bought Another.

Felton, Del., July 18, 1911.

Cyphers Incubator Co., Buffalo, N. Y.

In the spring of 1910 we purchased the first or lower (base) section of a Paradise Brooder and liked it so much that in the spring of 1911 we added a second or “upper” section. We had our Paradise Brooder in a small compartment of our brooder house and although there was no auxiliary heat we had no difficulty in keeping the chicks warm, even during the cold weather of February and March. Brooded as many as 221 chicks at a time and with fine success.

A. C. & J. MERITHEW.

### “Gives Excellent Satisfaction.”

Warrensburg, Mo., April 18, 1911.

Cyphers Incubator Co., Buffalo, N. Y.

It gives me great pleasure to recommend the Paradise Brooder. I am using three sections, which easily accommodate four hundred young chicks. The method of heating is highly satisfactory and being able to feed in the troughs has saved me about half my feed bill over other ways, because practically no feed is wasted. Everything about this machine gives excellent satisfaction.

GEO. M. BLISS.

### “And They Grew Rapidly.”

30 Dayton St., Springfield, Mass., July 29, 1911.

Cyphers Incubator Co., Buffalo, N. Y.

My experience with the Paradise Brooder I bought of you has been very satisfactory. I kept the chicks in a brooder in a large back room for the first three weeks. The number lost was small, being practically nothing but a few weaklings of the hatch. The chicks were very hardy and they grew rapidly. I was especially pleased at the ease with which the chicks can be cared for and the brooder cleaned.

J. E. SHAW.

### “No Other Method In Existence.”

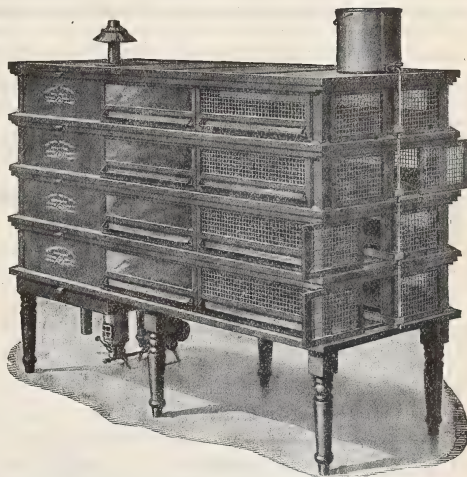

Garnett, Kas., November 17, 1911.

Cyphers Incubator Co., Buffalo, N. Y.

We use Cyphers Incubators and Adaptable Hovers exclusively, except that we are operating two of your four-section Paradise Brooders, and right here we want to say that there is no other brooding method in existence today that compares with the Paradise for raising chickens to four weeks old. They are fool-proof, time and labor saving and a great practical success. We earnestly believe that our success has been due to the fact that we started in the poultry business with dependable equipment and products—such as bear the Cyphers Company trade mark.

PEERLESS POULTRY FARM.

Fred. P. Spraul, Mgr.

Four-Section, One-Lamp PARADISE BROODER. Capacity 400 Chicks, in Eight Separate Lots of 50 Chicks Each

### “I Expect To Buy More.”

Saville, L. I., N. Y., August 8, 1911.

Cyphers Incubator Co., Buffalo, N. Y.

I want to say that I had the best of success with the Paradise Brooder and can show today six hundred of the finest White Wyandottes and one hundred and fifty White Orpingtons, which were all started in this brooder. Placed fifty chickens in each compartment and they died fine right from the beginning. It was warm and dry in the brooder at all times. The feeding troughs are the best arrangement any one could devise. Lost very few chicks—fewer than by any other brooding method I have ever tried. I expect to buy more of these brooders next season, about February, 1912.

FREDERICK A. DIETZ.

**PLACES TO USE:** THE PARADISE BROODER can be operated with success in a dwelling house, store room, stable, poultry building or other structure where the temperature does not go below freezing. It will give excellent satisfaction in any of these locations. No better or more convenient place can be found than near a window in a room of an ordinary dwelling—a south or east room preferred, where the sun will shine in on bright days. FOR DETAILED ILLUSTRATED DESCRIPTION of the Paradise Indoor Brooder (heated by coal-oil stove or by gas) write today for our “Poultry Growers’ Guide For 1912.” FREE on request. 244 pages, 7½ x 10 inches. Fully describes our more than 100 standard poultry articles for progressive, successful poultry raisers. Address place of business nearest you.

**Cyphers Incubator Company, Dept. 30 Home Offices, Buffalo, N. Y.**

# WARD'S CHAMPION DARK CORNISH

The big winners at the leading shows of America in 1912. Won 12 firsts, 12 seconds, 4 thirds, 3 fourths, 2 fifths on 33 entries, but 3 birds not getting placed. Showing at Allentown, Pa., Hagerstown, Md., Trenton, N. J., Philadelphia, Pa., same week as Chicago Club show, so was forced to show a second string at Chicago, Ill., against 268 birds shown by 40 other exhibitors. Also 16 valuable specials. Mating list ready. Yours for a red stamp. It describes my wins in detail.

First Prize Partridge Rock Cock  
Madison Square Garden, N. Y., 1913

## BIRD'S PARTRIDGE ROCKS

WON ALL FIRSTS AND SPECIALS AT MADISON SQ. GARDEN JAN. 1913

This remarkable record, with their decisive victories at New York, 1910-11, and Hagerstown, 1911-12, gives them a grand total of 21 of the 23 firsts competed for, and stamps them as America's undisputed champions. Their utility is equal to their beauty. The greatest prize winners and best breeders for you. Write your wants. Catalog for stamp.

REPEATED CHAMPIONS AT MADISON SQUARE GARDEN, NEW YORK, 1913

Our third consecutive win at America's leading show stamps them positively the Primers of all winning and quality strains. Their former records are history. This year, 1913, they win in the Gardens choicest class, Cocks, 1, 2, 3, 4; Hens, 1, 2, 3; Cockerel, 1, 2, 3, 4, 5; Pullets, 1, 2, 4, 6; Pen, 1st; First Display and all Specials. We breed them all.

First Prize Bronze Turkey Cockerel  
Madison Square Garden, N. Y., 1913

## BRONZE TURKEYS

WON ALL FIRSTS AT HAGERSTOWN, 1912, AND MADISON SQUARE GARDEN, NEW YORK, 1913

Making a grand total of 21 of the 24 firsts at 6 great shows in 1910-11-12-13. If interested in the World's Best Bronze write your wants. We will please you at right prices with the best exhibition and breeding birds ever offered.

Madison Square Garden, New York, 1913. Our seventh consecutive year of winnings at this great show again surpasses all former records by taking all four first prizes and three second prizes, Display prize and all specials. Write your wants. Catalog for stamp.

## HICKSON'S BARRED PLYMOUTH ROCKS

WIN AT THE NATIONAL CLUB SHOW --:-- CHARLOTTE, NORTH CAROLINA, 1913

The greatest record ever made at any Club Show was won by my birds January 10—14, 1913, at the Barred Rock Club annual meeting show in a sensational class of quality, the largest and best ever had in the South. I won Cocks, 1, 3; Hens, 1, 2, 3, 5; Cockerel, 1st; Pullets, 2, 4, 8; Pen, 2d; Pullet Bred Cockerel, 3d; Cockerel Bred hen, 1st, and more points than all others combined. My **First Prize Cockerel** also won Special for color, Special for best cockerel in the American class, and the **Sweepstake Special for best male bird in the show**. This line has been bred for nearly 20 years, and for years has won at the Virginia State Fair and other leading shows of the South, proving them of the richest quality and producing lines. Stock for sale. Eggs for hatching, \$5 per setting from my choicest matings. Circular free. Write me your wants. Absolute satisfaction assured. Mention American Poultry Journal.

BABY CHICKS—U. R. Fishel's White Plymouth Rocks the Best in the World

# Hip! Hip! Hooray!!

### Chicago Winners!

At this, the greatest of all Barred Rock shows, in December, 1912, (please note the date) in the fiercest battle of giants ever seen at this show, in competition with the best that New England and the east could produce, birds of

### ARISTOCRAT

BREEDING WON

### FIRST PRIZE

This feat was accomplished by one of my customers, and demonstrates again the truly superb quality which those breeders obtain who purchase and breed **Aristocrats**.

**First Prize** at the great American Royal Show was won by Messrs. Pate & Pate, Kansas City, Mo., on an **Aristocrat male**, in Oct., 1912. On Dec. 12, 1912, (mark the date) one of my customers, M. M. Smith, Abingdon, Va., made a clean sweep at one of the leading early shows of the east with **Aristocrats**, winning **4 1st prizes** in very strong competition. Think this over.

I have over 900 show birds which will be ready to win in January and February shows. Place your order if you want a winner.

Eggs from highest quality individual specimens, \$10 per 15.

W. D. Holterman, Fancier, Box A, Fort Wayne, Indiana

"Ringlet," 1st Prize and Champion Cockerel, 1st Prize Cock and 1st Prize Pen Cockerel at Madison Square Garden, New York, Winter 1910-1911.

The Three Greatest Living Barred Rock Males

# E. B. Thompson's Imperial "Ringlet" Barred Plymouth Rocks

Win the most wonderful record beyond all precedent in Barred Rock history at the imperial and most classic show of all America—Madison Square Garden, New York—this winter of 1913. See pages 304 and 305 for this unprecedented achievement unequalled in the annals of Madison Square Garden history.

My Imperial "Ringlets" won more first, regular and special prizes than any exhibitor of any breed.

To produce the first prize cockerel and champion male and first prize pullet and champion female in a single year, and win the two greatest prizes in the world at one New York Show has never before been accomplished by any living Barred Rock breeder.

A prominent eastern breeder said: "Mr. Thompson, I will give you \$1,000 for your first prize cockerel!"—\$5,000 would not buy him.

Theodore Hewes, the judge and editor, said: "No Barred Rock breeder ever saw such a cockerel nor did they think any such a bird could ever be produced."

## My Whole Exhibit Wore the Distinctive "Ringlet" Barring

For 25 years at New York my "Ringlet" victories have been complete; my clean sweep of 1st, 2d, 3d, 4th and 5th prizes on pullets has never been approached in Madison Square Garden and stands alone and unequalled.

The Imperial "Ringlets" are the standard by which all other Barred Rocks are judged. To meet success in winning prizes you must have my birds and eggs.

I will sell my grand exhibition birds for any show and breeders of this richest first prize New York blood.

Richly illustrated 70-page catalogue upon request, it is full of original pictures of New York winners from life.

**Eggs** From the finest exhibition matings in all the world, \$10.00 per setting; four settings, \$35.00: one hundred eggs, \$60.00.

## THE BIG QUESTION

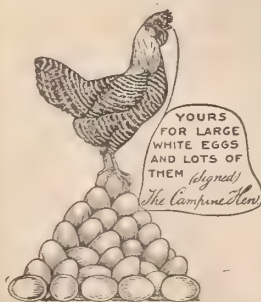

Why do I, after nearly 20 years of breeding and experimenting with many varieties recognized in the American Standard, now recommend and breed exclusively the

## CAMPINE FOWL

and call them "living egg machines?" Because I do honestly consider that they have in them six characteristics to a greater extent than any other breed of fowls in the world today. 1: Prolificacy; 2: Size of eggs; 3: Number of eggs laid; 4: Hardiness; 5: Small amount of food consumed; 6: Last but not least, their beauty. Now won't you let me tell you more about this wonderful fowl, which are living money makers for me? Remember, it will only be a pleasure.

NOTICE: Campineology (second and greatly revised edition) will be off the press early in January. It will be a work of art and an encyclopedia on the Campine fowl, showing colored cuts and many illustrations. Ten cents to pay postage will be appreciated. For Sale: I have a few birds left that I can afford to part with.

Aug. D. Arnold : Box 777 : Dillsburg, Pennsylvania

Harrison's Royal Red S. C. Reds  
Keep Winning

After winning the greatest number of points ever made at Chicago on special best display, December, 1912 (note the date), the total being 87, or, in other words, more than any other exhibitor ever won at this colossal show, AND WINNING IN EACH ONE OF THE SIX DIFFERENT CLASSES, A FEAT THAT HAS NEVER BEFORE BEEN ACCOMPLISHED BY ANY RED BREEDER, their winnings being numerated thus: 1st, 3d and 4th Cock; 2d and 3d Hen; 1st, 2d and 3d Pullet; 4th Cockerel; 1st and 2d Old Pen and 1st Young Pen. They go to Indianapolis AND MAKE THE GREATEST VICTORY EVER MADE ON R. I. REDS.

Royal Reds win 1st, 2d, 3d, 4th and 5th Cock; 1st, 2d, 3d and 4th Hen; 1st, 2d, 3d and 5th Cockerel; 1st, 2d, 3d, 4th and 5th Pullet; 1st, 2d, 3d, 4th and 5th Old Pen; 1st, 2d and 3d Young Pen and the ONE HUNDRED DOLLAR CHALLENGE CUP OFFERED BY THE ASSOCIATION FOR BEST DISPLAY.

ROYAL REDS won a total of 167 points on best display, while the combined amount of all competitors was but 11 points.

NOTE:—I recently made the purchase of 1st and 2d Chicago Cockerels from Mr. Ricksecker and now have in my yards every first prize winning male at Chicago, 1912.

My special inducement on eggs gives you an opportunity to secure them at less than half the price you have paid for this quality other years.

My free catalogue describes the best matings ever put together and explains the egg inducement. Free for the asking.

F. E. Harrison - Box 30 - Menominee, Michigan

HITCH UP WITH "TECKTONIUS" AND HIS  
UNSURPASSABLE "BUFF LEGHORNS"

AND BE A "TOP NOTCHER" IN THE POULTRY BUSINESS

No such aggregation of "prize winning" and "prize laying" characteristics have ever before been embodied in any one breed—evolved by any one breeder—as in the

"Tecktonius" Strain of S. and R. C. Buff Leghorns

"One Swallow Don't Make a Summer"

Neither does a win, now and then at some minor show, make a "prize winning strain," as a winner is bound to show up occasionally in any poultry flock.

Tecktonius "Sweeps the Boards"—Anywhere—All the Time

But when "Tecktonius" and his world-renowned "Buff Leghorns" enter a show—or an egg laying contest—they clean the boards; not occasionally, but all the time; not in some of the minor shows, but at all the big shows—against all the big competitors. I challenge anyone to show an equally as brilliant record.

Seven Years Straight Winnings

These "clean sweeps" for seven consecutive years, in the big exhibition arenas—in competition with the world's best—shows "Tecktonius strain" of Buff Leghorns to be wonderful birds—shows Tecktonius to be a Master Breeder.

World's Best General-Purpose Fowl

A 252 egg record—combined with six years brilliant array of wins—indisputably stamps the "Tecktonius strain" of Single and Rose Comb Buff Leghorns as the world's greatest "general purpose" fowl.

"Tecktonius Strain" Make You a Winner

Incorporate the "Tecktonius Strain" in your flock and you, too, will get in the poultry business RIGHT—you will have birds that will put you in the front rank in all contests—exhibition and egg laying—and keep you there.

You'll Win Fame and Fortune Breeding Poultry with My Buff Leghorns

F. A. Tecktonius : Route 7 : Racine, Wisconsin

It has chapters on Practical Methods, Profitable Results, Poultry Keeping in the City, White Wyandottes as the Most Profitable Fowl, The Specialist, and What It Means to You, Fisheldotte, the Home of the World's Best White Wyandottes, The World's Best—Why Our Birds are Entitled to the Name, Open Air Houses and How to Build Them, Baby Chicks and How to Raise Them, Natural and Artificial Incubation, Practical Poultry Pointers; in fact, every branch of the poultry business is covered in this great book. We will be pleased to mail you a copy on receipt of 25 cents in stamps or coin. Our illustrated price list free.

**J. C. Fishel & Son, Box J, Hope, Indiana**

Exhibit of  
Robert Essex Incubator Co.  
At International Poultry Show  
AMERICA'S LARGEST LINE OF INCUBATORS & BROODERS

## See All These Incubators In Our Free Catalogue

America's Largest Line—Offers You Big Choice—All Sizes—All Prices—All Superior

If you could only call at our factory and see the Superior manner in which these machines are made—every one of them—and then compare our prices with others, you would say "Give me the Essex-Model." I know you would. But you can see them nearly as well in our Free Catalogue which fully illustrates and describes how every part is made.

### You Can Get Our Factory Prices

by writing us just the same as you could by calling at the factory. We Guarantee that our Machines shall reach your Railway Depot in good order. We have Storekeepers all over the country who will be glad to show our machines. There is probably one near you. Write us, and we will send you his name and address.

Many leading breeders have seen our exhibits like the above photograph, at New York, Boston, and other shows, and have said "You have the best Incubators and Brooders that are made." You cannot make a mistake ordering an "Essex-Model" so well known throughout the world. They cost no more than others. They are in use on Experiment Stations

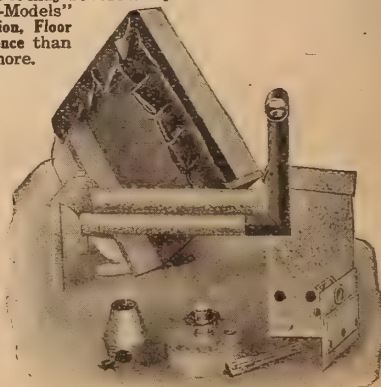

and on leading poultry farms. If you order today, we will ship promptly. Get your chicks hatched early and "make good."

There are many kinds of Brooders illustrated and described in our Free Catalogue—some for Outdoor use, some for Indoor—some for both. Some are sold with an outside wooden case; others without the case. Those without the case consist of metal heating parts for use in brooding houses, piano boxes or any other house. The photographs below show one of each kind. There are none so well made, so practical, and at the same time so low-priced as these "Essex Models." Our Free Catalog gives full information about all these different kinds.

While it is very important to be careful in buying an incubator, it is just as important to choose a Brooder. Most persons who fail to raise poultry profitably do so because they lose a lot of the chicks with poor brooders.

### Don't Lose Your Chicks After They Are Hatched

That is a sure way to lose money. Don't figure on saving a dollar or two when buying a brooder, because it may be lost many times over in the number of chicks that die. The "Essex-Models" give more Light, Heat, Ventilation, Floor Space, and Labor-Saving Convenience than any other make, and cost no more.

Essex-Model Portable Hoyer. Includes lamp box and lamp, thermometer, heat drum and pipes, wooden hover and curtain. All complete. Nothing more to buy. Cheapest, best ever made. Only \$7.50

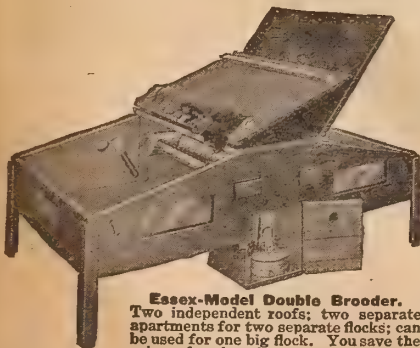

### You Cannot Afford to Buy a Poor Brooder

We offer you the largest choice, and every one down-to-date. Real scientific chick-mothers. We can truly say that the Essex-Model Brooders and Hovers are the only ones built along such practical lines as enable you with least trouble to "See Every Chick Every Day"—the Secret of Success. In other brooders you have trouble in seeing the chicks under the hover. The "Essex-Models" are down-to-date, built by practical men.

Our FREE CATALOGUE tells you all. It contains 30 Photographs of New Poultry Houses in use on Experiment Stations throughout the country, with measurements and cost; and Five Chapters written by Mr. Essex himself, entitled "Making the Most From Poultry"—"How Money is Made From Standard-breeds and Farm Hens"—"When You Start, Start Right"—"Health and Disease in Poultry," etc., etc. Write for it today. Address nearest office.

### Robert Essex Incubator Co.

3 Henry Street, BUFFALO, N.Y.  
67 Barclay St., NEW YORK CITY

Essex-Model Double Brooder. Two independent roofs; two separate apartments for two separate flocks; can be used for one big flock. You save the price of a brooder on every one you buy. Only \$10.

## MUNTZ'S S. C. WHITE LEGHORNS

win again in hottest competition. Chicago, Springfield and Elgin. Eggs from pens headed by these noted winners: \$3, \$5, \$8, and \$10, per setting of 15. Bred to lay, utility, \$1.50 per 15, \$2, per 30. Choice breeding stock at prices that will be of interest to you. If you want birds of quality, or eggs for hatching, write me, I can supply you. Satisfaction assured. My mating list is now ready, send for it.

## Ideal-Hover

## NEAT—HANDY—SAFE—DURABLE

Just set on the floor anywhere, light the lamp and in 20 minutes you have as good a chick Mother as money can buy. Pick it up and carry any place with lamp burning. **HEATER:** Our Duplex or Double Drum hot air Heater will produce 15 per cent more heat from the same amount of oil than any single drum Heater used in others. The Des Moines Seed Co., Des Moines, Iowa wrote us that the Ideal heat up the best of any Hover they had ever experimented with. **LAMP:** Our lamp will never cause trouble by smoking. Oil cannot become overheated as oil fount is on outside of Lampbox feeding oil to wick just as needed and just enough to keep it covered all the time. Lamp flame always in plain view. Lamp removed or pushed in place with one hand. The Ideal is 24 inches in Diameter, all metal but Double Curtain, has no Hot Center, and will brood 100 chicks. **GUARANTEE:** We will refund money if not entirely satisfactory. **SPECIAL NOTICE:** On account of Galvanized Iron and other products used in its Mfg., advancing in price, we have put the price to \$6.00 freight paid on two or more East of Rockies; \$7 freight paid on 3 or more west of Rockies. It is still from \$1 to \$2.50 cheaper than others, and the price will never be changed again, unless something extraordinary happens. Upon receipt of \$1 we will ship by Express C. O. D. to be examined. Freight allowed on two or more. Don't buy another Hover until you see our illustrated Circular; we can interest you. Don't fail to mention this paper.

DUPLEX INCUBATOR CO.,  
TREMONT CITY, OHIO.

## Chick Success

The raising of chicks is not difficult when conditions are right. Try our way, and make this your most successful season. Feed

**Pratts** Baby Chick Food

for the first three weeks. No feed on earth will give the youngsters such a vigorous start, and the cost is but 1c per chick.

In boxes and bags, 25c up

**Pratts** White Diarrhea Remedy

25c 50c

prevents and cures the bowel troubles which are so common and cause such heavy loss. Just drop the tablets in the drinking water for all broods up to one week of age.

**Pratts** Poultry Regulator

should be mixed with the daily ration after the third week. It induces rapid growth and early maturity by keeping the digestive system in perfect condition.

25c, 50c, \$1; 25-lb. Pail, \$2.50

YOURS FOR 3 CENTS A DAY

## The Truth About Credit

We give long credit—  
Ask no security—  
Ship on 30 days' trial—  
Give extra time when wanted.

## That Means This

You can order from us whatever you want for your home on 30 days' free trial. If you wish to return it, we pay freight both ways. We sell you on credit, without any security, any red tape or publicity. No interest, no extra price.

We guarantee to save you, and give a bond to save you, from 15 to 50 per cent.

We will let you pay as convenient—a little each month—by saving a few cents daily.

We have no collectors—you remit as you can by mail. If anything happens—sickness or loss of work—we will give you extra time.

## A Million Do It

Don't say that such terms are impossible. A million people get them from us now.

And we will, when you write us, give you a Surety Company's legal bond that we do just what we offer.

## 4,782 Bargains A YEAR TO PAY

Furniture

Show this wholly visible typewriter to your friends and let them see wherein it excels any \$100 Typewriter made, if we would send one to you Free of One Cent of Cost for you to keep forever as your own? Then on a postal card, or in a letter to us, simply say: Mail particulars.

EMERSON TYPEWRITER CO., Box 648 Woodstock, Ill.

# CANDEE

## Still Time to Install This Season

**Candee Sectional Incubators Can Be Set Up Nearly as Quickly as Small Machines.**

### *The Proof Multiplies.*

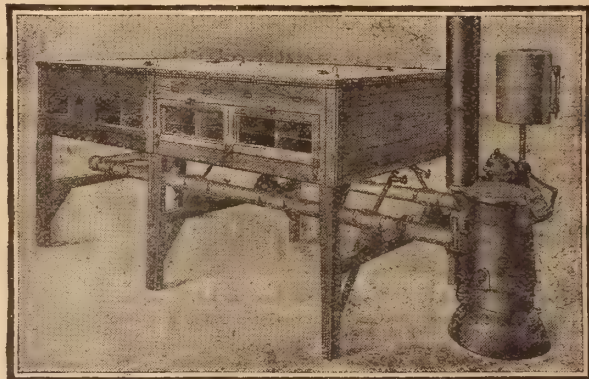

*All over Long Island the Candee duck machines are running.*

*They are hatching stronger and better ducks and larger percentages.*

*In New Jersey, Massachusetts, Vermont, Ohio, etc. the 1913 Candees are hatching thousands of chicks.*

*The operators are enthusiastic over their results—no sleepless nights—no worry or watching*

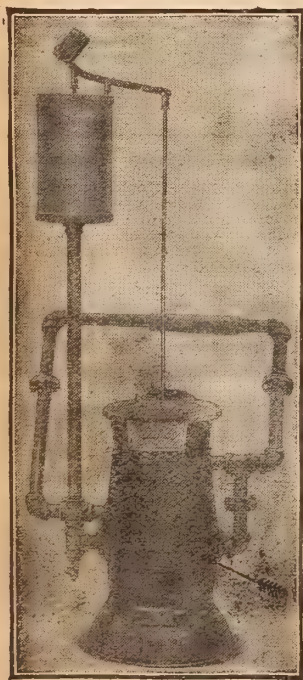

*In one case the operator did not make even one adjustment on the thermostat during the entire hatch.*

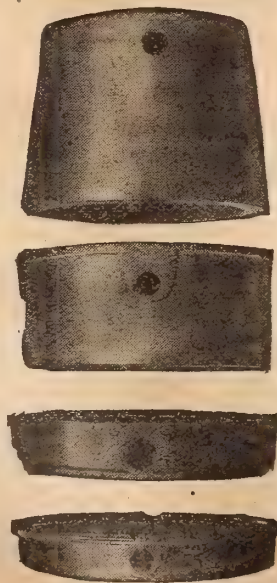

1200-egg Four Compartment Candee Incubator. Each compartment is a separate machine, operated like the small incubator. One heater takes the place of the oil lamps. Other sizes up to 20,400 capacity.

## Wire Your Order at Our Expense

**Candee Hot Water Brooding System is the simplest and safest,—cheapest to install and to operate for from 300 chicks upwards**

Enlarged Brooder Heater  
Arrow shows the extra ring in place.

The Extra Rings  
They make it unnecessary to buy a new heater for extra hovers.

### Adjustable Hovers

They give just the *degree of heat* you want.

Turn them up, like a piano stool, to reduce the temperature. Lift them off at any point.

No crowding of chicks—all get the heat they want.

Easy to clean and at a convenient height for work.

### 12 Sizes of Heaters

Buy just the size you need. The *Heaters* are sectional and when you add more hovers, put an extra ring in the heater. They grow with your business.

**Write for our Free Catalogue telling all about Incubators and Brooding Systems.**

**Candee Incubator & Brooder Co., Dept. 2, Eastwood, N. Y.**

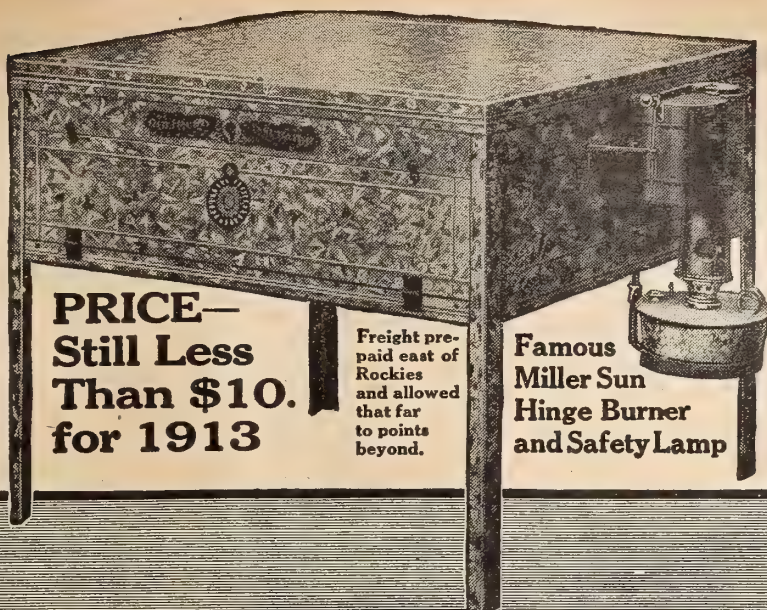

**The Only Incubator Company Who Manufacture Their Own Heaters.**

## Read This:

Mr. Earl Holladay,  
Payson Utah,  
writes:

"On April 7th I had 133 chicks from 138 fertile eggs. Out of the 5 eggs left, two were pipped but the chicks died in the shell, evidently too weak to get out. I always have a much larger hatch than any one around here. Please send me your price list. I want to get a larger Old Trusty some time between next fall and spring."

**PRICE—  
Still Less  
Than \$10.  
for 1913**

Freight pre-  
paid east of  
Rockies  
and allowed  
that far  
to points  
beyond.

**Famous  
Miller Sun  
Hinge Burner  
and Safety Lamp**

## Another One:

C. F. Bailey,  
Springfield, Vt., writes:

"I want one of your catalogs very much. I bought one of your 150 Egg Incubators last year second hand and like it the best of any incubator I ever used, and I have tried a number of different makes. The chicks are stronger. My last hatch was 105 chicks from 116 fertile eggs and lost only 3 of them. And when I buy another Incubator it will be an Old Trusty."

# Take the Johnson Path To Sure Success with Chickens

Whether you are a beginner or an "old timer"—you want to make the greatest possible success in raising chickens. More than 400,000 other folks—people just like you—men, women, boys and girls in *all* walks of life—have solved their incubator problem by purchasing an Old Trusty for less than \$10. from the Johnsons. Every one of these 400,000 has a good word for the Old Trusty and the Johnson people. First, because the Old Trusty has *made* good, and second, because the Johnsons treat their customers right.

## Famous Old Trusty—<sup>Less</sup> Than \$10.

The Johnsons have never made anything *except* high quality machines. If the Johnsons wanted to *skimp* on their incubator as some other manufacturers do, the Old Trusty could be sold for about \$7. and still net a profit. The description of the Old Trusty, as compared to other incubators, is *proof* of that statement. **The Old Trusty is sent out on 30 to 90 days free trial, freight prepaid east of the Rockies and allowed that far to points beyond—is guaranteed for 10 years, and 20 years if you say so.**

trouble—worry—or experimenting. Safety lamp and regulator fitted on at side—top clear for use as table in egg-testing. You don't have to put the Old Trusty together.

The Johnsons don't try to fool you. They *could* use cardboard instead of Redwood—they *could* use a galvanized iron tank instead of copper. They *could* use a cheap thermometer instead of a *good* one, a *frail* egg tray instead of a *strong* one. They *could* use a cheap lamp instead of one with the famous Miller Sun Hinge Burner. They *could* save a few cents here and there on *many* parts that you would not see, but which would *show* in the results and in the shortened life of the Old Trusty.

## Read This Description

The Old Trusty is simplicity itself—absolutely self-regulating and guaranteed to give 75 per cent or better hatches. The Johnsons don't claim 100 per cent hatches every time because it isn't true. They do claim that you will get better *average* hatches with the Old Trusty than with any other.

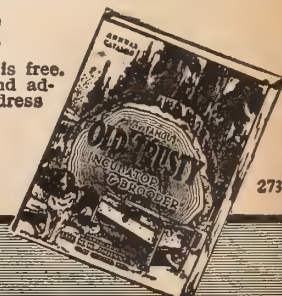

The Old Trusty is triple-cased throughout—inner case of high-grade 7-8 inch powder-dry California redwood—middle case of highest grade asbestos—fire-proof insulation—outer case, legs and all, of galvanized metal—equipped with guaranteed-not-to-leak 10-ounce cold-rolled copper tank and heater—indestructible—can't warp, swell, or open at the seams—with best thermometer, egg-tester, trays, and instructions—ready to run with sure results by anyone—no

## A Real Love Story About Chickens

All the facts about the Old Trusty are told in the Johnsons' 1913 book—sent free, One poultry raiser called the Old Trusty Book "A Real Love Story About Chickens." It tells why anyone else would have to charge nearly double Johnson's price for an incubator that would not come near equaling the Old Trusty. It tells how Johnson started with 65c and built up the greatest and largest business of its kind in the world. It tells why 400,000 Old Trustys have been sold—why they are making good and *proof* that they're making good. It shows hundreds of photographs.

## FREE!

The Old Trusty Book is free. Just send your name and address on a postal. Address

## These People Have Brought a Billion Chicks Into the World

400,000 incubators mean a solid line about 150 miles long. Think of it! Lincoln said that you can't fool all the people all the time. The Johnsons might have fooled 1,000 or 5,000 on a poor incubator and 10,000 or 20,000 on a fairly good incubator, but you can be mighty sure of the high quality of an incubator bought by nearly half a million people—on 30 to 90 days' free trial! Get the Old Trusty Book free by writing Johnson a postal.

# CHICK REARING PROFITS

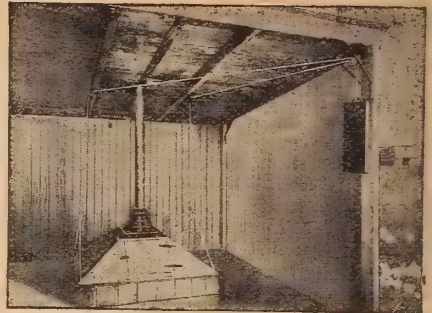

are the most elusive, and chick rearing losses the most discouraging features of the poultryman's calling.

What is the solution?

"Well Hatched chicks?"

Yes, that is necessary, and good food, of course. But why, with chicks from the same hatchery at the same price and food of the same quality and cost, do such remarkable differences appear in the "loss and gain" column of the ledgers of men who, judged by the appearance of their chicks, are equally good poultrymen?

Professor Rice ought to know. He does, and this is what he says: "The most expensive factor in rearing young chicks is the labor required to handle the large number of brooders when the chicks are kept in small flocks."

Hall Colony Brooder with Hover Down

## THE HALL COAL HEATED COLONY BROODER

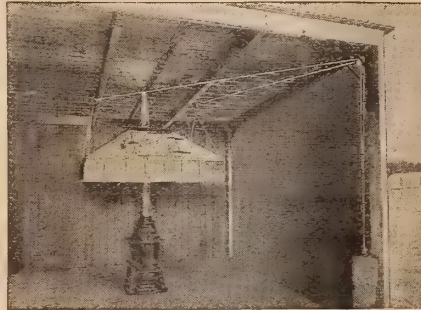

gives the chicks the essential comfort of ample heat combined with the vitality-building environment of all outdoors.

It reduces the fuel bill to a small fraction of the usual figure.

And, because it cuts out kerosene lamps, provides for flocks of from three to four hundred chicks, does away with extra floor levels, fixed hovers and little unsanitary boxes full of corners, the Hall Colony Brooder eliminates the unnecessary labor of chick rearing that has been the greatest stumbling block in the industry.

Write at once for our brooder booklet and prepare yourself to raise more and better chicks with less labor.

## A Big Thing on the Farm

Old Dutch Cleanser saves work and time on the farm in dozens of ways.

Aside from its many good uses in the home where it takes half the work from housekeeping, it is invaluable in quickly and hygienically cleaning the dairy pans and pails. In the barn, harness and carriage sides and tops clean easier and better. Everything that requires cleaning calls for Old Dutch Cleanser. Nothing else will do the work half so well.

Many uses and full directions  
on large Sifter Can — 10c.

# Old Dutch Cleanser

"Loaned my copy and it was never returned. Please send me another."

"Taught me more about Poultry Raising and Standard Bred Poultry than I ever knew."

"Saved me \$10 the first shot."

"Your article for beginners is great."

"Every illustration absolutely true to life."

"Showed Me How To Make More Money."

"A practical text book."

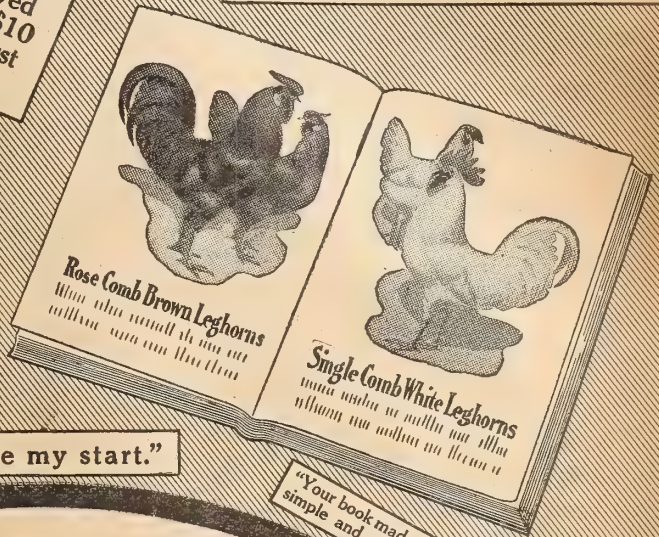

"Brimful of Helpful Hints"

"Told me just what I wanted to know."

"Gave me my start."

"Your book made everything simple and plain to me."

"Most interesting poultry book I ever saw."

## This Book Tells All About Poultry and Incubators

**Worth \$1.00 But Because It Contains Advertising You Get It Free**

**J. W. MILLER**

—Has Question and Answer Department and lists supplies and appliances that have given satisfaction to experienced, successful poultrymen.

This valuable book is not for curiosity seekers, but for men and women who are interested in poultry for pleasure or profit. The reason why I send it free is because it also tells all about my

If there ever was a book on poultry and poultry-raising that would pave the way to success in the business, this new big book of mine is the one.

Tells everything beginners and old timers should know:—

- Suggests what kind of foods to buy;
- Gives valuable information to beginners;
- Discloses the secret of my success—"How We Do It on Millhook Poultry Farm";
- Pictures and describes all kinds standard bred poultry;
- Gives coloring, habits, weight, etc., of different breeds;
- Quotes experiences of those who have "made good";
- Explains what remedies to use in time of need;

## IDEAL

### Incubators and Brooders

There are more chickens, sturdier chickens, greater profits for all in my "Ideal," than there is in any hatcher on the market.

### The IDEAL 240-Egg Size

**The Greatest Hatcher  
That Ever Came Out of  
a Factory**

You don't need to be an expert to run it.

It has a heating and ventilating system that *automatically* supplies required moisture;

—A regulator that will not allow temperature to vary a fraction of a degree;

—The best nursery advantages;

—The handiest egg tray;

—The most accurate thermometer;

—The record for successful hatches, etc.

Last year I sold this sure-profit-paying incubator at a price so low that I gained thousands of new customers. This year I'm going to keep up the good work and this is your chance to get my Ideal incubator at lowest figure ever quoted on an efficient, dependable hatcher.

### Here's My 1913 Offer

**I'll Pay the Freight—Give You an  
Unqualified Guarantee  
And Include Everything FREE**

—best safety lamp—burner, chimney, wicks, lamp bracket—all complete; also egg tester, egg trays, thermometer and thermometer holder, etc. There'll be no extras to buy. You will get the "Ideal" all ready for your eggs—all ready to make big money right from the start.

Before buying an incubator from anybody be sure to look into my IDEAL and learn the really low price I put upon it. Get the FREE book anyway, whether you are ready to buy now or not.

### Send Me a Postal—I'll Do the Rest

When writing, be good enough to mention whether interested in 60, 120, 175, 240 or 360-egg incubator. This will not obligate you in any way, but help me distribute my valuable book among those interested and not curiosity seekers.

This book is worth \$1.00 of anybody's money. You'll be glad you sent for it. Do it now—before you forget it.

# OWEN FARMS

## THIS YEAR'S WINNINGS

Owens Farms has just completed the greatest winning season it has ever experienced in its history. It has shown a large string of birds in all its varieties at Augusta, Atlanta (Georgia), Nashville, Memphis, Chicago and New York. We have won between FOUR and FIVE HUNDRED RIBBONS at these shows in the hottest classes and the strongest competition ever met by any one. These winnings have been made by practically different birds in each and every show, so that today never did Owen Farms, or any farm, for that matter, possess so many winning birds at one time as we have here now. The result is we have a large number of proven birds for sale. We also have brothers and sisters of these winning birds in large numbers for sale to improve the stock of any breeder in the country. For foundation stock I am positive that we can start you right and give you success from the very beginning.

Our prices on stock are always low when quality of birds is considered, and you can, if you wish, get from Owen Farms a little better quality for a little less money than you can from any other farm in the United States. One act on your part more than another that will help you in starting right is to give us an accurate idea of what you wish. So often we receive a letter asking us what we have in a certain variety, and the prices. Every one knows that the prices on thoroughbred poultry and foundation stock vary according to quality. If you would give us an idea of what quality you want and the price you want to pay, we can then describe and give you accurate statements and a proposition concerning just what you are wanting that we are sure you would approve. Nothing allows us to get so thoroughly in sympathy and touch with you as a buyer as a frank statement on your part of what you want.

**Eggs for Hatching**

We have said in our January advertising that this is going to be a great year for Owen Farms' customers. This is particularly true of all of its customers buying eggs for hatching. We have more winners in our pens, far better quality in the individual birds and better mated than in any previous season and that we shall in every case give astonishing results and winning birds as the result of our eggs this year we are far more confident than ever before.

Our mating list contains 75 pages. It is a book well worth having in your possession. Our catalogue and mating list of the previous year has 131 pages. Both of these are yours for the asking.

SEND FOR OUR CATALOGUE 131 PAGES AND OUR 1913 MATING LIST 75 PAGES. A POSTAL BRINGS THEM.

**Egg Prices**

Our prices this year are somewhat different than last. We have eggs at \$5.00 per sitting, \$30.00 per 100, from grand birds mated to produce excellent results. We have wonderful mated pens at \$1.00 per egg. Some special pens from which you can secure a whole sitting at \$1.50 per egg, and some pens, these being very limited in number and also limited in number of eggs to be sold from them, at \$3.00 per egg. Our mating list tells all about it.

**Foundation Stock**

We have said many times during the year that we have raised more and better birds than ever before, and this time finds us with a magnificent large lot of the very best birds we ever bred and raised. We can do wonderful things for you in improving your stock or in founding a new flock. You owe it to yourself to write and inquire about it, telling us your needs and wishes and letting us make you a proposition concerning it. We confidently say that we are THE AUTHORITY on the breeds we offer for sale. We have done larger and better winning in them than any one else. We have judges of these varieties that cannot be excelled in the United States, and when we tell you anything about a particular variety you can rely upon its being as good information and as honest in statement as anybody in the world can make.

Again we repeat, we are THE AUTHORITY on

# My X-Ray Incubator Uses Only 1 Gallon of Oil for a Hatch

and Requires only 1 Filling of the Lamp

Greatest incubator ever put on the market. Built totally different from other old-style machines. Has large oil lamp (4-to-8 quart capacity) *underneath*—square in the center—*not* on the side. This is only right *principle* of construction. Why? Gives an absolutely even heat in egg-chamber *all the time*. No cold sides—no draughts. Always proper hatching temperature. Fill lamps just once—then forget it till *next* hatch.

Other Incubators Use 5 Gallons of Oil (too costly!) and Lamp Has to be Filled Every Single Day

My patented automatic trip—an exclusive X-Ray feature—cuts down flame *at burner*, so there's no *excess* heat—no smoke, no smell—*absolutely no waste!* My X-Ray Regulator is purely *automatic*—takes care of itself—relieves

you of all responsibility. You never have to touch the regulator of my X-Ray; it's automatic; it's the most perfect heat regulating device ever invented.

My heater being centrally located (underneath) conveys equally a direct heat from the lamp into every part of the egg-chamber. Door of my X-Ray is on top—where there are two double-glass panels through which you can see the thermometer at any time, without raising lid and chilling eggs. To ventilate or turn eggs, simply raise lid. Eggs are never taken out of X-Ray.

**Shipped Direct from X-Ray Factory  
To You—No Agents—No Dealers—  
Guaranteed to Please—Freight Prepaid**

To use my X-Ray means less egg-handling, less oil, less heat generated, absolutely no waste, no filling of lamp during hatch, no fumes, no danger of "cooking" eggs—but an even heat always over the **WHOLE** egg-chamber. My X-Ray weighs  $\frac{1}{4}$  to  $\frac{1}{2}$  less than the old-style machines of same egg capacity. I, personally, guarantee it to please you—to give you the biggest and best hatches you ever had. Anyone can be successful with my X-Ray—it is so simple. It is neatest, cleanest, most beautiful incubator made. Women everywhere prefer it—often placing it in their houses, it is so attractive.

My new free book No. 10 tells all about the X-Ray Incubator and Brooder. Shows why X-Ray Brooder is best home for little chicks. It has same perfect heating system as X-Ray incubator, with big lamp that requires only *one* filling. Safer than the old hen herself to raise chicks.

**Write Today for Free Book No. 10 on X-Ray

# ALDRICH'S WHITE ORPINGTONS

## THE STRAIN OF QUALITY

If you wish to be successful in the poultry business, be sure to start with the most popular and best paying variety, the **S. C. White Orpington**. This variety is conceded by all to lay **more eggs in Winter**, to be the fastest growers and the best table fowl, thus making them bring better returns than any other breed; in addition, they are the most beautiful and most easily handled of all chickens. If you get started right with good stock or eggs, your success is assured.

FIRST PRIZE WHITE ORPINGTON HEN AT  
MADISON SQUARE GARDEN N.Y. DEC. 1911.  
FIRST PRIZE HEN BALTIMORE JAN. 1912.  
ALDRICH POULTRY FARM COLUMBUS, O.

To prove to you the **superior quality** and the excellent blood lines of our strain, we call your attention to our winnings this season at Allentown, Atlanta, Baltimore, Augusta, Chicago and Madison Square Garden, where our birds won a total of **59** out of the **150** prizes offered in competition with 983 of the best birds shown by 153 exhibitors from 30 states as well as the cream of the birds from Canada and England.

Our winning of first pen and first hen **during the same week** at both New York and Baltimore, as well as first pen, first cock and champion male and president's cup at Chicago show, at which show we won 68 points against 66 for all our **44 competitors combined** in the largest class ever shown in the world, as well as sweepstakes for best cockerel in the Atlanta show, and champion Futurity cockerel and pullet at Allentown, is a record never before equalled in a single season, and our record last year of 51 out of 150 prizes offered at St. Louis, Cleveland, Pittsburg, Chicago, Baltimore and New York, in addition to our customers' winnings in shows in all parts of America, is further proof that our farm is **today** the headquarters in White Orpingtons.

The great demand, as well as our greatly increased facilities, and the personal attention of all three members of the firm and England's best White Orpington expert, Mr. L. Rawnsley, enables us to offer the **highest class of stock or eggs** at prices **lower than ever before thought possible** by a reliable breeder. If you wish show birds or large healthy, vigorous breeders to build up and strengthen your flock, let us quote you prices.

We have mated up 30 pens **never before equalled** in the world in White Orpingtons as these pens contain over 200 prize winning females of this and last season's leading shows, and all are **trapnested** and headed with prize winning males from these shows, all being carefully selected and mated, particular attention being paid to size, type, color, strength of bone and above all, **heavy egg production**. Birds hatched from eggs from these pens will be among the **winners** at next season's shows for our customers as they were during the past seasons and eggs from these grand pens are only \$5, \$10 or \$15 a setting of 15. On account of the great demand we would advise early bookings if you wish eggs at any definite date. We will reserve a setting of \$15 eggs for \$5, or one of \$10 eggs for \$3 or one of \$5 eggs for \$2. Send for our catalogue and mating list giving full description of all pens. We guarantee satisfaction in all cases.

**ALDRICH POULTRY FARM**  
STATION B, R. F. D. 7 : : COLUMBUS, OHIO

# Is Incubation a Science?

At the Hall Incubator Factory we think it is. But we believe it to be a very unfinished science and hold that while the general principles are known there remains yet to be found out further knowledge that will enable the hatchery of the future to eclipse the hen in quality of work as it now eclipses her in quantity.

The Hall Company is firmly of the opinion that in addition to the practical experience and knowledge available to the incubator manufacturer and operator there is great need of further and fuller research in incubation by scientific men working in University laboratories.

We hope to see the day in the near future when there will be professorships and research fellowships in incubation as there are to-day in steam engineering or butter-making, and that courses will be offered in our agricultural colleges designed to turn out trained hatching specialists. Such men are needed now and five times as many will be needed five years from now.

You, Mr. Busy Poultryman, can put your shoulder to the wheel and work for fuller recognition of the science upon which your business is based, but you cannot shut down your hatchery until the legislators legislate and the investigators investigate. You must have chicks this year and next. You must take the science of incubation in its present state just as we take it in building the Hall Mammoth Incubator.

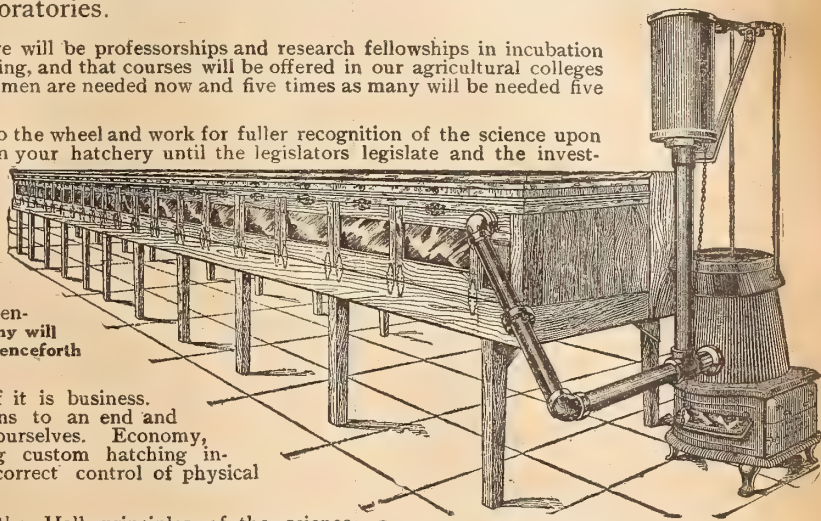

While we do not know that our knowledge of incubation is perfect, we do know that the Hall machine is a highly perfected mechanism for maintaining those conditions or factors which are now believed to be essential to successful incubation, and that the Hall Company will be the first to apply discoveries that science may henceforth make.

Incubation, however, is not all science. Part of it is business. The Hall Company looks upon science as a means to an end and that end is profits for our patrons, and hence for ourselves. Economy, safety, simplicity, adaptability to the ever growing custom hatching industry—these points we consider as important as correct control of physical conditions.

In our new catalogue we have fully set forth the Hall principles of the science that rests on hatching percentages, fuel bills, labor costs and annual profits, as well as of the science that concerns itself with radiation, oxidation and evaporation.

Even if you are not in the market for increased incubating capacity, we want you to send for this handsome book, in which we feel a keen pride, because of its evidence of the gratifying progress of the mammoth incubator which this company carried alone through the difficult days of its early history.

Not the least feature of our new catalogue is a collection of views of nearly one hundred poultry plants from which have been banished forever Kerosene with her retinue of evil spirits.

Here is one of the many letters that accompany these views:

RIDGE POULTRY FARM,  
Ramsey, New Jersey.

"Our eggs are never tested and have averaged fully 85% hatch of good, strong, lusty chicks, such as only a Hall can hatch. Our Hall has been in use some six years and today is running better than ever. Our best hatch has been 147 strong chicks from 150 eggs set."

July 26, 1912.

Downs & Wheat.

## The Hall Brooding System

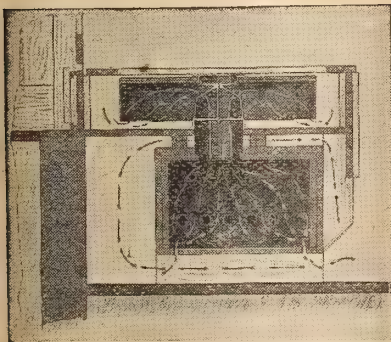

Diagram showing air movement in Hall Brooding System

is an adaption of the principles of the Hall Mammoth Incubator to brooding, and shows the same advantages and economies of the central self-regulating furnace and the perfect linear distribution of heat by flow and return pipes. It eliminates at one sweep the irregular heat of small brooders, lamps and resulting fires, fumes and kerosene bills, the multiplication of little doors, dampers and regulators, boxes and corners, multiple floor levels and endless other unsanitary and unnecessary details and unnecessary and unprofitable labor.

The differences between the Hall incubating and brooding systems are those based upon the differences in the physical needs of unhatched and hatched chicks.

First, as the chick is not so susceptible to minor temperature changes, the general woodwork of the brooder system can be built by the purchaser.

Second, since the chick can regulate its own moisture supply by drinking, there is no moisture problem, and ventilation can and should be more rapid than in incubation. This faster circulation of warm pure air is attained by carrying the heating pipes in a double walled box beneath the floor. In this box the air is warmed and, rising through the thimble, is deflected down upon the backs of the chicks as they nestle beneath the protecting hover.

No other principle of wholesale brooding from one central heater has proven generally successful. Pipes under the floor on any other plan would mean hot feet, cold backs and weak chickens. Pipes above the chicks, if enclosed, mean foul and stagnant air; if open, the draft from along the floor rushes in and passes up by the heated pipes to the ceiling, heating the whole room and producing July, rather than April, conditions.

Considering the advantages of central heat and the difficulty of its application it is small wonder that The Hall Brooding System has persistent imitators. Before you buy a brooding system, look carefully to the number of pipes in the heating box, the ease of access beneath the hover, the quality of hover construction and hover "felt," and the method of regulating the heat at the individual hovers.

Our new catalogue covers the Hall Brooding system, giving full description, drawings, photos and reports of results.

If you are a big chicken man or expect to become a big one, you cannot afford to be ignorant of Hall History and Hall Progress.

Here is one of the scores of reports on our brooding systems that appears in the new catalogue:

BRAESIDE POULTRY FARM,  
Sircudsburg, Pa.

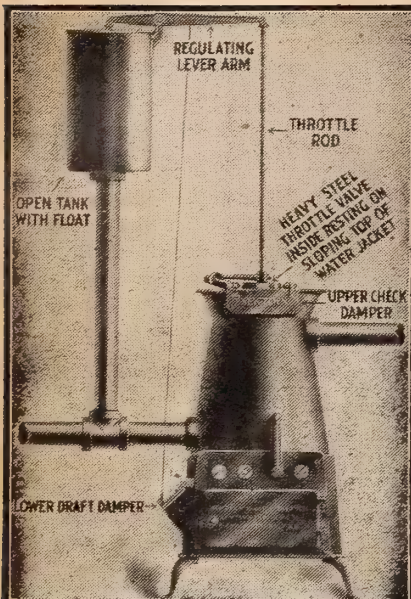

"In the Spring of 1910 we were using indoor kerosene heated brooders with unsatisfactory results, the loss amounting to 28 per cent. Early in 1911 we installed a double Hall Brooder House, 32 hovers, and our loss using your system was 15 per cent. This season our loss amounted to 11 per cent."

August 3d, 1912.

Robert Eastwick.

## An Always-Reliable Guardian for Your Eggs and Chicks

You're sure there'll be no unexpected rise in temperature to bake your eggs and smother your chicks, if you install a Newtown "Giant" Incubator and Brooding System, because the

## Newtown "Giant"

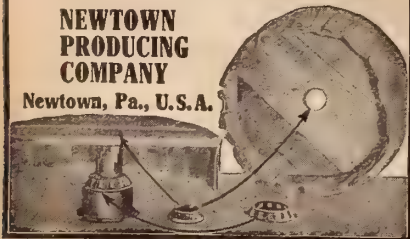

### Incubator and Brooder Heater

has three dampers, all regulated automatically—its base and water jacket are each cast in one piece—its top throttle valve is of heavy steel which cannot warp, and fits on a sloping, funnel-shaped seat which prevents the lodgment of coal underneath. These exclusive "Newtown" features insure against undesirable draft and excess heat.

Let us prove to you why the "Newtown" will hatch and raise more chicks for you. Write now for our finely illustrated Incubator Catalog I and Brooder Catalog A.

# 36 Years Back of Stahl's EXCELSIOR

**STAH**L invented the first artificial hatching machine in 1877—35 years ago. Since then he has been improving it year by year so that now his latest incubator is his greatest and many years ahead of all others. The U. S. Government protects a manufacturer's patent for 17 years. Stahl's *expired* patents are now used on many other incubators. But the latest and best inventions of Mr. Stahl *cannot* be used by anyone else for the next 17 years. That is why *no other incubator* can be as good as Stahl's new Excelsior—the incubator that is backed by

**Direct  
to You at  
Factory Price**

**The Crowning  
Triumph of  
the Originator  
of Modern  
Incubators**

## Over 50 Patents

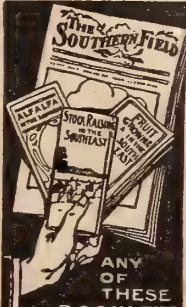

The Excelsior has a heating system that is a marvel of accuracy. Every inch of the egg chamber is heated to a uniform degree and kept at that uniform temperature by Stahl's patented regulator—a new and better thermostat. Get Stahl's new book and read about all of the new features—the Automatic Egg Turning Device; Scale of Thermometer on top—always readable; Lamp cannot be filled while lighted, cannot explode. Fire-proof heater encloses lamp. Automatic ventilation; automatic moisture supply; and every other up-to-date feature necessary to largest possible success.

If you are thinking of buying an Incubator you will make a serious mistake if you don't first learn all you can about Stahl's. You can pay more money for other Incubators but you cannot get the Stahl exclusive ideas and Stahl efficiency except in Stahl's Excelsior. Write for direct-from-factory offer and let Stahl's 36 years of poultry and incubator experience be your insurance against loss or disappointment.

### Write Now for Book—FREE

If you want an Incubator (no matter what size) that will hatch the highest percentage of vigorous, healthy chicks at least cost and least trouble to you, send for my book, "Raising Poultry for Pleasure and Profit." It's free. 29470

## Cheap. Profitable Farm Lands

For Stock, Poultry and Hog raising, Dairying, Fruit growing, Truck Crops, Alfalfa yields and General Farming, the SOUTHEASTERN STATES present soil, climatic and market conditions unsurpassed by any other region.

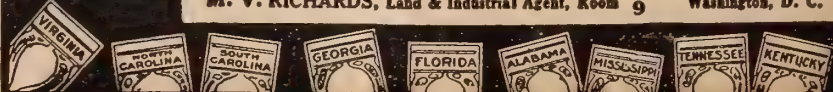

Farm land values are most tempting. Undeveloped tracts sell from \$6 an acre up; improved properties range from \$20 to \$50 per acre.

### THE SOUTHERN RAILWAY

Mobile & Ohio Railroad or Georgia Southern & Florida Railway

will help you find a desirable farm location where two and three crops grow annually. Alfalfa produces 4 to 6 tons, Corn yields 60 to 100 bu., Truck crops make \$100 to \$400, Apple Orchards \$100 to \$500 per acre, and Beef and Pork are produced at 3 to 4 cts. per lb.

Let us know in what state and branch of farming you are interested. Information given and free publications furnished on application. **M. V. RICHARDS, Land & Industrial Agent, Room 9 Washington, D. C.**

# Wisconsins Victorious—Winners in 3 Big Hatching Contests

Winner in Missouri Valley Farmer Contest in 1910—Also Winner in Successful Farming Contests, 1911 and 1912

Read the wonderful records below—which prove beyond question that the famous Wisconsin machines are the Best for the Money in the World.

Mrs. Jerry McMahon, Veedersburg, Ind., with a 125-egg Wisconsin Incubator, hatched 125 chicks from 125 eggs, in the big 1910 Hatching Contest held by the Missouri Valley Farmer, making her one of three prize-winning contestants, with over a thousand competing. (Sworn Statement.)

Mr. C. B. Armitage, Atwater, O., hatched 88 chicks from 88 fertile eggs and 93 chicks from 93 eggs, in the 1911 contest held by Successful Farming, with his 125-egg Wisconsin Incubator, making 100% hatches. The two highest hatches of any machine entered in the contest with two hatches.

Mrs. J. W. Mize, Vaughn's Mill, Ky., won in the big 1912 Hatching Contest held by Successful Farming—105 chicks from 105 fertile eggs, 103 chicks 106 eggs.

If you want to get results like these, why take chances? Get a pair of these unbeatable machines—you can't go wrong!

## 125-Egg Wisconsin Incubator and Brooder Both for \$10

FREIGHT PREPAID  
EAST OF ROCKIES

### Why Pay More? Why Take Chances?

I stand ready to prove to you that there are no better machines on the market for anything like my low price. I stand ready to let you prove it in your own home, to your own satisfaction (not mine), and pay the freight charges both ways. You take no risk, no chances. I will ship you one of my 125-Egg Hot-Water Wisconsin Incubators and a 125-Chick Brooder on 30 days' trial—and if you don't find it the best hatching outfit after 30 days' trial ship it back, and back comes your money.

Machines that win in the big hatching contests, year after year, surely must have unusual merit. But remember that they must win your satisfaction or I take them back—return your money—pay all freight cost.

I have been advertising in this paper for years. The publishers know me and know that I do just as I agree. I am undoubtedly making the readers of this paper the most remarkable offer on high-grade Incubators and Brooders that has ever appeared in the paper.

**The Wisconsin Incubator Is Hot-Water Type** It has double side walls, with dead-air space between; top has 3 walls; large double glass doors; copper tank and boiler; roomy nursery beneath egg-tray; self regulating. Made of high-grade California Redwood—not paper—nor do we paint them to cover up cheap lumber, but we stain and varnish them to show quality of lumber—completing a machine that has no equal at anywhere near the price. **The Brooder** is a roomy, well-made, properly heated and ventilated machine—fitted with hover, oil lamp and wire scratching yard, as illustrated. Both machines, complete, set up, ready to use—with Taylor "Tyco's" thermometers, O.K. burners, safety oil lamps, egg-tester, everything but the oil—all for only \$10. If you don't wish to order from this advertisement, don't buy until you send for my 1913 Free Catalog. Write for a copy today, so that you can compare the material we are putting in our Wisconsin Incubators and Brooders with the material other makers are using. If you will do this, we know that you will order a Wisconsin—the machine that stands on its merits, its proven qualities.

**Wisconsin Incubator Co., Box 50, Racine, Wis.** THOS. J. COLLIER Manager

Thos. J. Collier  
Mgr.

### Proof in a Nutshell

Here are a few comparisons or "proofs" that will help you to avoid making a mistake in deciding which machines to buy:

**1st** The Wisconsin has double walls with dead-air space, a decided advantage. Some have no dead-air space.

**2nd** Egg chamber in the Wisconsin is fully ten inches deep. Some to cheapen cost of making are scant eight inches deep.

**3rd** This makes the nursery less than two inches and too shallow for little chicks. In the Wisconsin the nursery is three inches deep.

**4th** In the Wisconsin there is plenty of room between the egg-tray and the door for the chicks to get in the nursery. In some incubators you have to open the door in order to put the chicks in the nursery.

**5th** The Wisconsin has large double glass doors through which the thermometer can be easily read. Some have small single glass, making it necessary to open door to read thermometer.

If you will make these comparisons—weigh them well—I know you will order my machines and be better pleased—for these are cold facts which actual comparisons have proved.

# Rose's Black Orpingtons

## Champions of America

You Ask Why?—We Will Convince You

Because—We not only made a clean sweep at Madison Square a year ago, winning Grand \$25 Gold Special Best Display, but followed up this record by winning five times as many Blues with our Black Orpingtons than any other competitor at seven greatest shows in America this season.

Because—At these seven classic shows; Toronto, New York State Fair, Allentown, Hagerstown, Baltimore, Madison Square, and Boston, we captured 26 firsts out of a possible 36, also 23 seconds, 11 thirds, 8 fourths and 5 fifths.

Because—At these seven important shows, six times we won the Grand Special for Best Display; twice Cup for Best Cockerel in entire show, and once Cup Best Male in show.

Because—We have supplied winners that have won at all the leading shows including Madison Square, Baltimore and Boston.

### Wins at Boston, 1913

Our last show this season we crowned our previous victories; 1st, 2d cock; 1st, 2d hen; 1st, 5th, 6th cockerels; 1st, 2nd, 3rd pullets; 1st and 2nd pens; and all specials offered.

Eggs—Guaranteed hatchable eggs from the choicest pens of Blacks, containing more renowned winners than any other breeding pen in the world, \$10 per 15. All unfertiles replaced free. Buff Orpingtons that won Madison Square 1912-13; 2d hen, 3d cockerel, 1st pullet, 4th pen, also 13 Blue Ribbons at above shows. Eggs \$10 per 15. Catalogue free.

## Burpee's Seeds

are supplied every year direct to more American planters than are the seeds of any other growers. Do your seeds come direct from Philadelphia? If not, we should like to make your acquaintance. Simply send us your address (a postal card will do) and you will receive **Burpee's Annual for 1913**,—a bright book of 180 pages, which has long been recognized as "The Leading American Seed Catalog." Kindly write to-day! Address

**W. ATLEE BURPEE & CO., Burpee Buildings, Philadelphia**

## As Heat Rises Moisture Must Fall

*High heat must have low moisture.  
Low heat must have high moisture.*

This is a rule never to be violated. A certain definite relation exists between heat, moisture and ventilation. The more closely it is observed, the nearer the hatch comes to perfection.

## Mandy Lee Incubator

**Adapts the Moisture to the Heat**

**Heat  
Moisture  
and  
Ventilation  
Measured—**

**No Guessing**

It is the one scientific incubator, because it is the only one that measures and secures right relations of hatching requirements. Hatching with the Mandy Lee is exact work. Thermometer, Hygrometer and Triple Automatic Regulator cannot go wrong like machines watched and "tended" without knowing what is wrong or what is required.

Everything is measured, not guessed at, in the Mandy Lee. All is automatic. See Lee's latest catalog for particulars on modern scientific hatchers, including New 600-Egg Incubator.

Use **Germozone** this year, standard remedy of the world for Roup, Colds, Cholera, Canker, Bowel Complaint, etc. Also **Lice Killer, Egg Maker and White Diarrhoea Remedy.** All Lee modern poultry books free. Address

**GEO. H. LEE CO., 1101 Harney St., Omaha, Neb.**

## A Better Hatcher for Less Money

The Queen's record ranks it with the very highest priced incubators. Not claims, mind you—I mean the record, what it actually does, year after year. Hatches always as good, even better than the others—and costs \$10, \$12, and even \$15 less. The only high-class machine sold everywhere at a fair price.

## The Queen Incubator

**28 Reasons Why**

My Poultry Guide and Catalog shows them. Let me send it free—a fine, big book, right to the point—full of things you ought to know. Shows why so many thousand Queen users are doing so well—why so many thousand more buy Queens each year. The incubator built to last 25 years.

Distributing houses in the extreme East and West for quick delivery. No delays. I prefer to any National Bank in Lincoln. Write for book now before you forget.

# Why So Many Chicks Die in the Shell

Thousands of chicks die in the shell after piping, simply because they cannot get enough oxygen from the close, stuffy air in the incubator. Frequently, at piping time, the air is so bad that a candle will not burn in the machine. Chicks have small chances among such conditions. Thousands of chicks die after reaching the brooder, because they were so poisoned by foul air in the incubator that they came out weak and unable to resist disease.

## The Merkley Oxy-Vitalizer

Will save these chicks for you. All they need is oxygen! Just as a doctor saves the life of his patient by administering oxygen and helping nature in the struggle for life, you can get larger hatches of stronger chicks by supplying oxygen two or three days at the end of the hatch. It is a safe, simple, inexpensive process—nothing complicated or mysterious about it. Operates itself, perfectly harmless, easy to install.

**Stimulate Your Chicks by Supplying Plenty of Oxygen. They Will be more Profitable for it.**

The Merkley Oxy-Vitalizer can be attached to any machine in five minutes. It will last a lifetime and will serve for several machines, as it is used only in the last few days of the hatch. Needs no attention at all. Simply put in a fresh cartridge of chemicals at the beginning of its use. Cartridges cost \$2 per half dozen. No experience, no watching, no trouble.

### The Greatest Poultry Invention of the Age

Write today for free copy of illustrated descriptive booklet. Price of vitalizer complete, ready for use, express charges prepaid, \$3.50.

Los Angeles, Cal., March 4, 1912—Merkley Mfg. Co.: Used vitalizer on two hatches, 173 chicks from 185 eggs and 170 out of 181. Am perfectly satisfied. Walter M. Chase.

The Merkley Oxy-Vitalizer will increase your profits. Order one today. Mention A. P. J.

Let Me Save You Money  
on Your Incubator

I don't care how large or small a machine you want, I can save you money on it. I know incubator values from A to Z. I know what it costs to build them and I know how cheaply the best incubator can be sold. I have been building them for over 31 years. I own the largest incubator and brooder factory in the world. I know what I am talking about. I know that you will receive one of the biggest surprises of your life when you

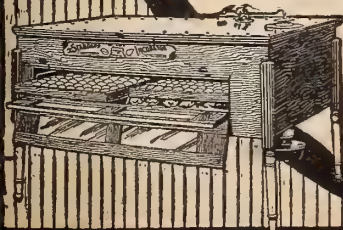

**Get My Rock Bottom Prices on the "Reliable"**

Here's an incubator that's made of absolutely the best materials from beginning to end. Thoroughly seasoned matched cypress lumber is used in its construction. A double heating system is built right into the incubator. Yet you can get at it in a second. The Reliable has an accurate regulator—tanks of cold-rolled builder's copper—metal chimney—government standard tested thermometer and all-metal safety lamp. No matter how cold the weather, you can absolutely depend on the Reliable. No worry—no trouble—no bother. It is guaranteed to hatch any egg that can be hatched—in any altitude. No machine can do more. Do you know of any other of which you can be so sure? Built in 7 sizes. One is just your size. Get my prices. Don't buy until you do. Write tonight.

**RELIABLE BROODERS**

Are made of the same high grade materials with the same workmanship and care as our famous incubators. Choice of either Hot Water or Hot Air heating. Made in four sizes—for 80, 120, 220 and 300 chicks. Send for detailed description and prices.

## Breeding and Exhibition Stock Baby Chicks and Eggs

Buff and White Orpingtons    White Wyandottes  
S. C. and R. C. R. I. Reds    White Leghorns  
Buff Leghorns    Indian Runner Ducks

At eight of the leading shows of the United States we have won

## 260 PRIZES

For the breeding season of 1913 we have mated up 35 pens of grand quality, and in addition individual and colony pens aggregating nearly 1,000 splendid breeders. Over 2,500 birds were available for selection, a number amply sufficient to insure the highest of quality.

At LaGrangeville, N. Y., we have our 160-acre farm which is admirably adapted for a great poultry producing plant. At Bryn Mawr Park, Yonkers, N. Y., is our metropolitan branch plant where we have several of our choicest breeding pens of each variety, and also have on hand and for sale stock the finest quality. Bryn Mawr Park station is only ten miles from N. Y. City.

All our stock has been raised on free range, which with us means fields, woods and orchards.

## Special Prices on Fine Breeding Stock

Cocks, \$5.00 and up; Hens, \$3.50 and up; Cockerels, \$5.00 and up; Pullets, \$3.50 and up. Prices on exhibition stock quoted on request.

The chick crop of 1912 was much below the average, consequently the demand for baby chicks, eggs and stock is unusually large this season. We therefore recommend early placing of orders. By ordering now and making a small deposit customers may insure for themselves shipment on date selected by them.

All our baby chicks are hatched in Hall Mammoth Hot Water Incubators and are equal in every respect to hen hatched chicks.

Catalog, with prices of eggs, baby chicks and stock, now ready. Send for copy.

# BANTA

Here is what the Banta Incubator will do:

- 1—Hatch more chicks. 3—Last year after year.  
2—Hatch stronger chicks. 4—Cost least to operate.

It is the product of 20 years' experience in incubator making by skilled workmen, most of whom have been with us for years. Its price is based on the principle of a dollar's worth of value for every dollar it costs you. Therefore, if you want

## The Incubator

### Giving Years of Service

and giving big, successful hatches right along, investigate the Banta.

We have special agencies in many cities where you can see and examine the machine you want. If we have no dealer near you, we will ship direct.

**The Banta never disappoints.**

We also make a complete line of indoor and outdoor brooders, coops and houses at very low prices.

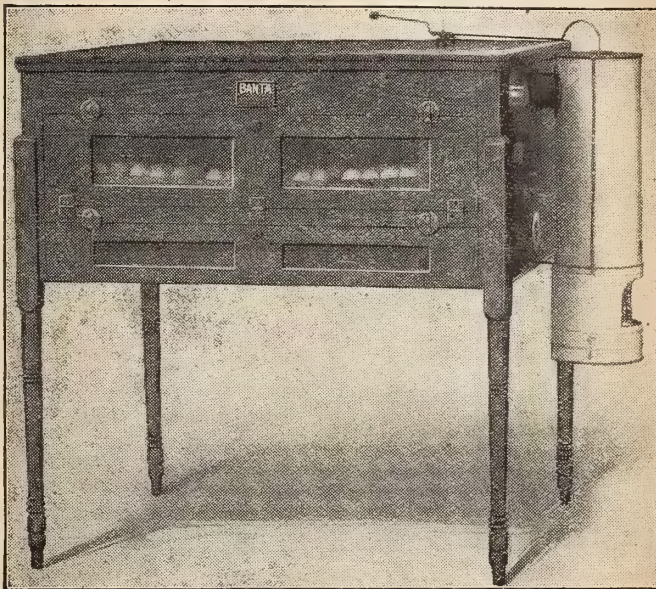

### Send for the Banta Catalogue

Helps you decide how to get the best value for the least money. Shows what are the essentials for getting continuously good hatches and makes you competent to pick out a good machine. Sent free.

## Knocks 'Em Stiff in a Jiff

There isn't a ghost of a show for lice and mites on hens, chicks or nests after a dust with the old reliable Lambert's Death to Lice. It knocks 'em stiff in a jiff. As one of the big successful poultrymen wrote us, "It is impossible to get along without your louse killer," so it is with every user. There's nothing so efficient.

## Don't Experiment

Follow the example of the leaders—ask any successful poultryman which lice killer has been the standard for 30 years—which is acknowledged BEST. He will tell you to

### Get Lambert's

**OLD RELIABLE DEATH TO LICE**

because he has found it **always** the BEST.

Don't expect to make your hens pay and permit lice to worry and annoy them. The lice will get the profit and often the hens and chicks, too. A few cents invested in Death to Lice will bring dollars in profit. Just the thing for layers, sitters, and exhibition stock. Will not injure eggs, chicks or hens or soil plumage. Get a 5 oz., 10c box at dealers to try (or send to us direct if he can't supply you). Other sizes 25c, 50c and \$1.00. Lambert's Latest copy of "POCKET BOOK OF POINTERS," a valuable book for poultry raisers. Mailed for 2c stamp.

501 Traders Bldg. Chicago

## Natural Hen Incubator Approved by Over 550,000 Buyers 200-Egg Size, Only \$3

J. F. Siems Patentee

### A Very Simple System

The Natural Hen Incubator is no experiment. It has been tested by over half a million people. There are no lamps, no oil, no deadly fumes and no costly mistakes. **No freight to pay.** Eggs stay in healthy, sanitary condition during entire hatch. Different from any other incubator. Has all advantages of old fashioned, setting hen and gives greater percentage of saved, healthy chicks than in artificially heated incubator. A. A. Linnett, Kan., writes: "I have just set my N. H. Incubator for the third time. First hatch, 99 chicks from 102 eggs; second, 97 chicks from 104 eggs." Thousands of other voluntary testimonials. More agents wanted. Write today for FREE Catalog telling all about it and containing special introductory offer.

**NATURAL HEN INCUBATOR CO., Sta. H., Dept. 4, Los Angeles, Cal.**

## Our Trade Mark Guarantees Quality

It assures absolute satisfaction to the purchaser. It means highest quality of product—sturdy vitality and purity of strain. It stands for years of careful breeding and selection. It protects buyers of Michigan Poultry Farm

### White Leghorn Chicks and Breeders

The fact that we sell half our stock in advance every year to old customers, is certainly strong evidence of the quality that the Michigan Poultry Farm Trade Mark represents. Our satisfied customers write our best ads.—read the testimonial below.

## Only the Most Modern Equipment is Used at Michigan Poultry Farm

We have mammoth incubating capacity of 60,000 eggs at one time. Our cellars, brooders, runs, ranges and houses are faultless in construction and efficiency. They are built right and managed properly.

**Our Stock is Vigorous—Heavy Laying** through years of careful and intelligent breeding. Our birds are trim, clean of line and limb, and possess stamina and fertility.

Write for our catalog—it will save you money. It contains full description and prices. Free.

**MICHIGAN POULTRY FARM**  
Lansing, Mich.

Birmingham, Mich., Jan. 13, 1913.  
Michigan Poultry Farm,  
Lansing, Mich.  
Gentlemen:

I am more than pleased with the egg yield from the chicks hatched last year. They have been laying steadily since October and I have never received less than 40 cents per dozen, and part of the time, 50 cents per dozen.

I use Open Air Houses, and, as cold as it is now, I collected today and yesterday 75 eggs from my 175 pullets. This average keeps right up.

I cannot say too much for the stock I received from you last March.

Sincerely yours,  
(Signed) M. O. FLOYD.

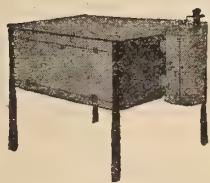

# LOYD'S PRIZE WINNING PARTRIDGE PLY. ROCKS

## ARE STILL WINNING

At Indianapolis, Feb. 3-7, 1913, we won as follows on twelve entries—Cock 1-2-5; Hen 2-4-5; Cockerel 1-3; Pullet 1-3-4. 11 prizes on 12 birds. No pen shown. At Cleveland, Jan. 20-25, 1913, Cock 1-3-5; Hen 2-4-5; Cockerel 2-5; Pullet 2-4 First Pen and special for best display. Send for 1913 mating list, and start right with the right breed.

**A GREAT BIG HAND GRINDER**

that will save its cost several times a year and will furnish one to two bushels per hour of fresh ground corn, oats, peas, dry bone, oyster shells, nut shells, dry stale bread, etc., for poultry feed, or will grind table meal for family use.

A child can operate it. Thousands sold annually. Shipping weight 40 lbs. We also build a full line of Power Feed Mills, Samson Wind Mills, Gasoline Engines. Ask for catalogs, stating line in which you are interested.

**Stover Mfg. Co., 318 Plymouth St., FREEPORT, ILL.**

## Hen Growth Made Sure

The road from chick to hendom has many pitfalls. From the breaking of the shell to the pullet stage is the most critical period—the structure-building period—when stout muscles, rich blood and abundant feathers must be developed. The reason why many chicks do not reach maturity in full vigor is the prevalence of such common troubles as gapes, cholera, roup, indigestion, etc.

## Dr. Hess Poultry Pan-a-ce-a

cures and prevents these difficulties, hastens maturity, tones up dormant egg organs, shortens the moulting period. Chicks brought up on Dr. Hess Poultry Pan-a-ce-a become prolific layers—the only kind of fowl worth while feeding. The cost of this preparation is very small—a penny's worth feeds thirty fowl per day.

1½ lbs. 25c (small or express 40c); 5 lbs. 40c; 12 lbs. 51.25; 25-lb. pail \$2.50. Except in Canada and the extreme West. If your dealer cannot supply you, we will. Send 2c for Dr. Hess 42-page Poultry Book, Free.

\$8.00

Every  
Buckeye  
Guaranteed  
to Hatch  
Every  
Hatchable  
Egg

THE illustration shows the 60-egg Buckeye Incubator—a machine complete and guaranteed in every respect. This size costs only \$8.00. Buckeye Incubators are made in five sizes—60-egg to 350-egg. They are equipped with every desirable device to hatch strong chicks that live and thrive. The Buckeye has the reputation of hatching bigger, stronger chicks than any other incubator. Certainly, no other approaches it in popularity. Think of it! Over 325,000 in actual use. 100,000 sold last year—more than any other make. Its simplicity is unapproached. Thousands buy them who have never before operated an incubator and bring off successful hatches.

The Buckeye hatching principle and plan of construction has been adopted by the big 10,000-egg machines. Could it be paid a greater compliment, or could there be greater proof that it is correct in principle and practice?

You can buy a Buckeye in your own town—see it in operation before you buy—and prove to your own satisfaction that it will hatch more chicks and stronger chicks than any other method. Write us for the name of the firm who represents us in your town—then go and see the chicks hatching. Your name on a postal will bring you our dealer's name and our catalog.

# **"PITTSBURGH PERFECT" CHICKEN & RABBIT FENCE**

**KEEPS IN ALL SIZES OF CHICKENS AND RABBITS**

**KEEPS OUT ALL SIZES OF PROWLING ANIMALS**

This is the best looking, strongest, and by far the most *effective* and *durable* fence ever designed for chicken and rabbit purposes.

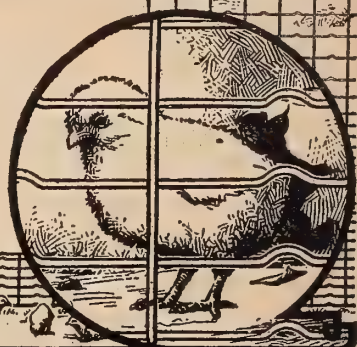

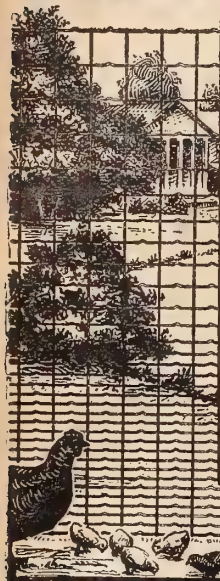

Up 1½ feet from bottom of fence, wires are only 1 inch apart. Small poultry or animals *can't get through*. Upright wires are either 4 inches or 6 inches apart, as desired.

The wires used are twice as heavy as in ordinary poultry netting, and the *Electrically Welded Joints* produce a *one-piece fabric* which stands stiff, even and firm for years.

All "Pittsburgh Perfect" Fences are made of special Open Hearth wire, heavily galvanized, and Electrically Welded into different styles for FIELD, FARM, RANCH, LAWN, CHICKEN, POULTRY and RABBIT YARD and GARDEN. *SEE THEM AT YOUR DEALER'S*. Save money by putting up your fences properly—see our Catalogue, sent free.

A few plants will produce more Tomatoes than any family can use.

### OUR SPECIAL OFFER

We want every person who uses seeds to see our 1913 Seed Book and try this Gigantic Tomato and we will send a sample packet for trial, with Seed Book Free. This book is full of new Vegetables, Fruits and Flowers. Send your address plainly written on Postal today. Fairview Seed Farms, Lock Box 122, Syracuse, N. Y.

## HUMPHREYZE YOUR HENS

I keep hens because I enjoy them and because I want fresh eggs.

What is more, I get them. All winter my small flock will average 40 to 50 eggs a day, and I have gathered 68, and I am not a professional poultryman. I usually keep about 70 hens. Around me my neighbors were not getting any. That is, they did not until I told them how. Now they get as many as I do. They say I Humphreyized their hens, and I have adopted that word for my own.

I will tell you how to Humphreyize your hens, so you can get eggs right through the winter months. If you have no more than 10 hens, it will pay you to Humphreyize them. It costs you nothing to find out how, and I will give you a

It makes no difference what breed you have. Some breeds are better winter layers than others, but any breed can be Humphreyized

**30  
Days'  
Free  
Trial**

and made to lay in winter. The increased egg crop will, in a short time, more than pay the cost, while the feed bill will actually be about half what it now costs you when, perhaps, you get no eggs.

A piece of fresh bone which you can get at your butcher's for nothing, or a few cents at the most, is a part of Humphreyizing, but if you will

**Send for my book  
"The Golden Egg"**

which is free—you will get the whole thing. I tell you how to care for your flocks month by month, what to do in case of sickness—in fact, my book is an easily understood guide. With it you can make your hens lay, and give vigor and strength to the whole flock. Send for a copy to-day and begin to Humphreyize.

## "Tycos" BROODER THERMOMETERS

are Accurate and Reliable. They insure a Certainty  
that Means Better Brooding—Stronger Chicks.

No brooder is better than its thermometer. You  
MUST be sure, Mr. Poultryman, that the temper-  
ature IS exactly what the thermometer SAYS it is.  
You CAN'T AFFORD to run risks with chicks.

*"Tycos"*

Brooder Thermometers are ABSOLUTELY DEPEND-  
ABLE. They are made right and are thoroughly tested  
before leaving the factory. Magnifying lens front, mercury  
tubes only — highest quality throughout.

# Genasco

THE TRINIDAD-LAKE-ASPHALT

## Ready Roofing

Many substitutes are manufactured products whose oils of value have been extracted for other purposes, leaving a hard black pitch—a lifeless mass that gives roofing but little resistance. It soon cracks, breaks, and leaks.

Genasco—made of Trinidad Lake asphalt—has the natural oils preserved in it "for life"; and the life defends it against years of rain, sun, wind, hail, snow, heat, cold, fire, alkalis, and acids.

Get Genasco Roofing of your dealer. Smooth or mineral surface. Guaranteed. Genasco smooth surface roofing has the **Kant-leak** Kleet, that waterproofs seams without cement, and prevents nail-leaks. Write us for samples and the Good Roof Guide Book, free.

## FELCH OFFERS

The product of his breeding pens of 1912 in Brahmas, White Orpingtons, White and Barred Rocks and White Wyandottes that seem better than any previous years output. Send for circulars and particulars. Mention A. P. J.

I. K. Felch, Box 176, Natick, Massachusetts

## As Permanent as a Roof cut out of Solid Rock

Can you imagine anything more durable than a roof cut out of solid rock!

Such a roof would be practically *indestructible*. Fire couldn't burn it. Acid fumes, gases, rain, snow, sun and extreme temperatures couldn't injure it.

A roof of this description—a roof that is cut from solid rock to all intents and purposes—is

## J-M ASBESTOS ROOFING

This roofing is made by crushing solid Asbestos Rock and compressing the long fibres into a dense, homogeneous felt. Several layers of this rock felt are then permanently cemented together with nature's greatest water-proofer, Trinidad Lake Asphalt making a light-weight roofing that is virtually a *solid sheet of pliable stone*.

J-M Asbestos Roofing forever rids you from the expense of repairs. *No coating. No graveling. Everlasting* After more than a quarter-century of service J-M Asbestos Roofing shows no signs of deterioration. It is the cheapest of all roofings from the cost-per-year standpoint.

Adapted to any building and any climate. Easily and quickly applied. If your dealer can't supply you, we will ship direct.

Write our nearest branch for sample of the Asbestos Rock from which this roofing is made and Illustrated Book No. 2326

ALICE RAWSON - BIG ROCK, ILLINOIS

## Golden Wyandottes

At the great and noted Boston Show Jan. 1913, I won on Golden 1st display; 1, 2 and 4 cock; 1, 4, 5, and 6 hen; 1, 4, 5, and 6 cockerels; 1 and 5 pullet; 2 pen and a lot of specials. I have a fancy lot of stock for sale, but no eggs this season. Please mention A. P. J.

LOREN H. BROWN

Lock Box 16 Lunenburg, Mass.

## Day Olds

White Indian Runner ducklings, 50c each. Single Comb White Leghorn chicks, 15c each. Fancy hatching eggs, half above prices. Safe arrival and fertility guaranteed.

Our White Runners are pure line bred, and most prolific layers known. We have four generations in our yards and know what they produce. Guaranteed never one feather or egg but white. They have brought home many prizes. Have won first wherever shown. They paid us \$50.00 each last year. It pays to start with good ones.

Our Leghorns have 205 acres of alfalfa and fields interspersed with spring branches and shade to roam over. No male in our breeding yards whose mother has not produced 200 eggs in one year. Incidentally we have a box of blue ribbons they have won. We raised over 95% ducklings hatched and over 90% Leghorn chicks last year. This speaks more than pages as to health and vitality of our flocks. Booklet telling our way free to all customers—not for sale. It contains no wonderful secret, but is a simple work-a-day outline that has proven satisfactory with us. Order direct from this ad. Money back without argument if you are not satisfied. Catalog upon request.

JAS. R. SYNDER  
BOX O. FRAZER, MO.

## YOURS FOR THE ASKING

Every person who contemplates the rearing of Baby Chicks the season of 1913 will find it to their advantage before making a start to secure a copy of our "Directions for the Feeding of Little Chicks." Mailed free on request.

Dept. J. NORWICH, N. Y.

## BUFF ORPINGTONS

At the Great Northern Ohio Fair, I won first cock, second hen, first and second pullets, and second pen. My Orpingtons are especially bred for size, for winning prizes, and for egg production. They will not disappoint you. I have five grand pens mated for the egg trade. Get my mating list. It is free. I have a few more grand males for sale that are buff to the skin. Write your wants, I can please you.

CARL E. ROGERS :- R. D. No. 2 :- PAINESVILLE, OHIO

## BLINK-BONNIE S. C. WHITE LEGHORNS

Special Sale of Choice Breeding Cockerels—We are offering at special prices 50 selected Blink-Bonnie S. C. W. Leghorn cockerels. They excel in shape, have the best of pure white color and strong heads, legs, etc. They will prove extra value to the buyer at \$5, \$7.50 and \$10 each. If you are looking for quality with the best of breeding, try them. Booklet for the asking. Satisfaction assured. What you buy we stand by.

BLINK-BONNIE POULTRY FARM, BOX A, BATH, PENNA.

## THE ZERO SAFETY LAMP

Is the Wise Man's choice. Are you satisfied with that old and dangerous lamp? You certainly must realize the importance of having a dependable and safe heating plant in your incubator and brooder.

### The Zero Safety Lamp is SAFE, CLEAN and RELIABLE

Safe because our special construction prevents heat of burner from reaching oil tank. Clean because the combustion is even and lamp does not smoke or become sooty. Reliable because the burner is the best of its class and being cooled by the ascending column of air does not cause wick to "draw" and raise the flame. Keeps egg chamber at uniform temperature. From any of our dealers or by mail for \$1.25, postpaid.

The SANITARY CHICK FOUNTAIN is the most sensible made. No chance for the chicks to get wet or drown. Easily cleaned and filled. Holds one quart and goes into any brooder. Price is 25 cents, or by mail for 35 cents, and once you use it you will never get along without it.

The ATSATT'S CHICK FEEDER is the neatest device ever invented for feeding young chicks. They cannot get into it or stand on it. Gives them clean food and insures their health. Top removes for cleaning and filling. Just right for your brooder (10 in. long, 4 in. wide). Price 25c or by mail 35c. Ask your dealer for our goods. If he will not supply you send direct to us and we will see that you get what you order. Our catalogue for the asking.

ATSATT BROS.  
27 PEARL STREET, MATTAPOISETT, MASSACHUSETTS

## BABY CHICKS

All free range stock and all hatched in our new latest Mammoth machines. This will insure nice, big, strong, vigorous chicks that will win for you in the next Fall shows. We make a specialty of White Leghorns and Barred Rocks. Our prices are very low, considering the high quality chicks we put out. This is our ninth season. Our capacity will be 40,000 eggs per hatch this season.

# The National Club Meet

## THREE HUNDRED STRONG

It's Not Easy Money for Competition Strong  
and the Judge on the Square

The largest class of WHITE WYANDOTTES of the season at the National Club meeting at Albany, N. Y. Did you see what I won? I won 2nd, 3d and 4th cocks. (Framingham Chief came back at three years of age and won 2nd. Tail was in poor condition, as he was very lame for two months this fall from a fight and injured it a bit.) 3rd hen; 1st, 2nd, 5th and 6th ckl.; 2nd and 6th pullets; 2nd pen, old; 2nd pen, young; 1st collection; Sweepstakes in the American class; best shaped young male; best solid colored ckl. in the show; best Wyandotte ckl. in the show. My pen of young laid way over anything in the show, but Judge found a slight defect in male's wings and set it back. But say! You as a future buyer don't really care what I win. I might save every good bird and make a "killing." What does that really amount to if during the meantime I had not taken good care of you? Wouldn't that especially apply had you sent me your good money and then failed to make you win? My trade since early fall has won almost without exception the Blue. You must have been reading my recent ads and these tell in part how I have cared for them and how they had won. (Anyone doubting the truth of a single testimonial published, I'll satisfy through the editor. As to who bought, that's between me and my customer.) On wire I sold from my fitted string for Albany, 1st ckl. and 1st pullet, for one of our largest eastern shows. Hardly a mail comes but some customer on stock

or eggs, writes of wins he has made with my stock. It makes one feel good! Read this telegram from two birds sold:

Ga., Dec. 1912.

"I won first ckl. and first pullet with birds you sent.  
Hottest class ever shown in the south. Ticked to death."

My Dear Mr. Duston:

La., Dec. 1912.

Both Mrs. \_\_\_\_\_ and myself wish to thank you for the fine pullets which you sent and to congratulate you upon their success. We won 1st and 4th Wyandotte pullets; first on Best Wyandotte female, and Best Pullet in the Show. We want a nice ckl. and pullet next fair season, etc.

I also sent at same time on a wire, a ckl. and two pullets to a hot Michigan show and won for my customer, 1st ckl., 1st and 2nd pullet. I cannot afford space to tell you of more. I'll just say I have lots of fine stock yet to sell. Write me, I'll gladly quote you. I'll also mail you my mating list. Speaking of mating lists! I have some wonderfully fine pens mated up. Here's a sample of what my trade does with my eggs. I quoted a regular egg customer in Iowa on a show bird. He did not feel he was warranted in paying so much, for he said, "I have had extremely good luck in buying eggs and getting good ckl. The old bird hatched from the eggs I got from you in 1911 is a wonderfully good bird; shall use him on the same pen of hens he had last year. He produced the goods, etc." I have matings better than any I ever saw, and you'll get the benefit of my years of experience in mating if you buy of me. Eggs \$10.00 a set; two sets \$18.00; three sets \$25.00; \$50.00 in hundred lots. Beautiful illustrated catalogue sent for 15c in stamps.

# SMITH'S SINGLE COMB BUFF LEGHORNS

The largest Buff Breeder in the world and the world's best blue ribbon winners and winter egg layers. I have mated this year over 1,500 fine breeders that are the pick of over 47,000 birds raised in the last 4 years and winners from 13 of the big shows.

Stock for sale at all times, 1 bird or 1,000 birds. Eggs, \$2 per 15, \$10 per 100, \$75 per 1,000, and up. I have incubator capacity for over 10,000 eggs every 3 weeks, and expect to hatch over 40,000 day old chicks this year from good, strong, big, vigorous birds that range in age from 1 to 4 years, and the chicks will live and grow fast. Day old chicks, 25 for \$6, 50 for \$11, \$20 per 100, \$180 per 1,000, and up. Get my guarantee on stock, chicks and eggs before you purchase your stock.

Send 10 cents in stamps for catalogue and find out how to raise 150 pullets to the age of six months for 15 1-3 cents each.

# Buy Your Incubator of Chas. A. Cyphers

The Cyphers who is "The Recognized Authority" on Artificial Hatching.  
 The Cyphers who made Commercial Hatching Possible.  
 The Cyphers who discovered the Cyphers Principle.  
 The Cyphers whose Incubators Circle the World.  
 The Cyphers who will sell you his latest creation, the "Buffalo" at half the Standard Price.

**Let Me Save You 50%** My new incubator, the Buffalo, fulfills the life-long demand of thousands of poultrymen for a **Standard Hatcher** at a reasonable price. It offers all the Quality of the best high-priced incubators, at **half the price** of any other incubator containing the **Cyphers Principle**.

## Sterling Principles Maintained

Every vital principle that made my Original Cyphers a World Success is embodied in the Buffalo. The same three-compartment heater; the diffusive ventilation; and the sensitive and accurate regulator; combined with heavy insulation and durable construction; with refinements not included in the original. Buffalo Incubators insure you big hatches of strong chicks that live and are easily raised to make money for you.

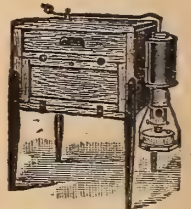

The Buffalo is simply a wonder. I am proud of it. There is nothing cheap about it but the price.

I offer you an incubator that is second to none in **Durability, Reliability, or Quality**. You can't get a better incubator than the Buffalo, no matter how much you pay. You can't get one as good. There are incubators and incubators, and nearly any of them will hatch some chickens. The biggest profits are made by operating the Buffalo, which will hatch a strong and vigorous chicken from every hatchable egg.

### NOTE MY LOW PRICES:

OFFER No.	0—	50 to	60	Egg Size—	Shipping Weight	65 lbs.	\$10.50
"	"	1—110 to	120	"	"	90	14.50
"	"	2—220 to	240	"	"	130	19.00
"	"	3—340 to	360	"	"	160	24.00

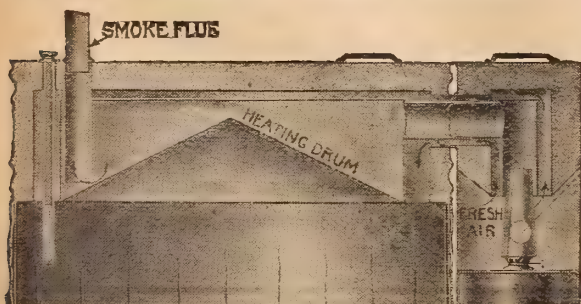

*My Brooder Prices Are Equally Low.*

### Something New In Hovers

**Buffalo Handy Hover \$8<sup>00</sup>**

**Buffalo Home-Brooder Hover \$7<sup>00</sup>**

**Buffalo Handy Hover 100 Chick Capacity**

Hover will heat 10 degrees hotter with same oil consumption, and in a room too cold to use any other hover.

The Buffalo "Handy" is a floor-level hover. You can set it any old place.

**Sanitary**—all galvanized iron.

**Heats Easily**—walls are heavily packed with good insulating material.

**Uses But Little Oil**—flame burns with a white light, which indicates complete combustion.

**Hottest At Outer Circle**—heat is brought lowest at that point.

**Perfectly Ventilated**—heater is double with fresh air flue.

**Handy**—just pick it up and set it aside to clean the floor. Lamp flame can be seen without stooping. Lamp compartment or heater is attached to hover with "rolled-edge slip-joint," and is quickly detached for tending lamp.

Has all the good points of others, with thick walls and complete combustion added. Others are thinly insulated and are hard to heat. Other lamps burn a yellow flame, and waste oil. The Buffalo Handy

*Send postal for fuller description, or better, send along your order before we are over sold*

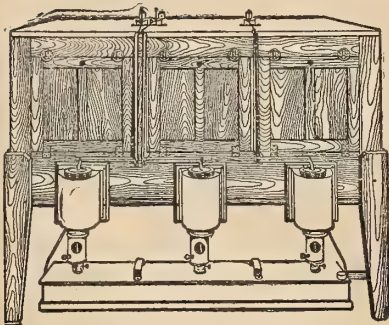

**CHAS. A. CYPHERS.**

**President Buffalo Incubator Company**  
 465 Dewitt Sreet, Buffalo, N. Y.

The Cyphers who is "The Recognized Authority" on Artificial Hatching.  
 The Cyphers who made Commercial Hatching Possible.

 The Cyphers whose Incubators Circle the World.  
 The Cyphers who will sell you his latest creation, the "Buffalo" at  
half the Standard Price.

# The New BIG 4

The New Big 4 Buffalo is an incubator, not a hatcher. You put in 420 eggs every six days, and after the eighteenth day the first lot of eggs is transferred to the regular hatcher for exclusion. The full equipment includes a 360 egg Buffalo, supplied with short legs, to be placed on top of the Big 4. Or you can utilize your present hatcher, whether a 360 egg Buffalo, Cyphers, Model or a Prairie State for the exclusion.

The Big 4 is designed primarily to cut down the required incubator house room, which costs more than the incubators. The usual space allotted to a 360 egg standard incubator is five feet. In this space a Big 4, with a 360 egg Buffalo on top, will care for 1620 eggs.

**Price of Big 4 Buffalo, Capacity 1260 eggs \$70.00**

**Price of No. 3 Buffalo, Capacity 360 eggs 24.00**

**Total Cost, Capacity 1620 94.00**

The Big 4 is substantially made. The neat measurement is 28 in. x 44½ in. x 58 in. The walls are thick and well packed. The doors are double. The amount of oil consumed to heat it is but a trifle more than required for a 360 egg standard incubator.

The lamp needs filling only once each week. By using a low seat instead of stooping, the attendant can quickly trim the wicks without removing the lamp. The chimneys push up into the heaters, and fit on the burner with a guide ring. The three burners can be attended quicker and easier than one regular lamp can be filled and trimmed daily.

Each of the three compartments is heated and regulated entirely independent of the others. Each compartment has two double trays, each holding 210 eggs, which are turned by simply turning over the tray. The space occupied by 420 eggs is 8 in. x 12½ in. x 35 in. In this nest the extreme variation is one degree, against two degrees between the top and bottom of the egg in any standard incubator. While being perfectly ventilated, there is no draught on the eggs, which are pocketed. The trays are turned by chart, and the eggs remain in one position for only twelve hours in four days.

The Big 4 Buffalo is a wonderful machine, and has taken me more than 20 years to perfect. It has the other large hatchers beat in quality, in economy of labor, in space occupied and in price.

Circular now ready. Address,

**CHAS. A. CYPHERS**

*President Buffalo Incubator Company*

## Your Opportunity is Here

Having purchased the entire flock of the famous Rocky River Poultry Co.'s ROSE COMB WHITE LEGHORNS, the strain that has won all the prizes at New York, Chicago, Indianapolis, etc., this in addition to our own 15 superb pens, puts us right in the lead. When you are contending with the opinions of half a dozen breeders who think they have found the biggest values for the money, or when you are at home thinking it over—this when you are in doubt—write to us if you want ABSOLUTE LIMIT OF STYLE, fine layers and exhibition birds. Positively there's not a more EXCLUSIVE STRAIN IN AMERICA than ours. Write for our catalog. Do not forget our BABY CHICKS; also our famous Single Comb White Leghorns.

LILY WHITE POULTRY YARDS :- LINCOLN, ILLINOIS

## Canada's White Rock Farms

THE ROYAL STRAIN, GREAT WINNERS—Canada's best show, the Ontario Guelph, 1912, won 1st cock, 3d and 4th hen, 1st and 2d cockerel, 1st and 10th pullets. At Buffalo's 1913 greatest show, after selling a number of my Ontario winners, won 1st cock, 1st and 3d hens, 1st and 4th cockerel, 1st and 5th pullets, 1st pen and all specials. Size and vigor are a feature of this line that have been bred and exhibited by me for many years. My pens are mated this season with the highest quality specimens I ever produced. You would do well to get my list and prices before placing your order. Eggs and stock for sale at all times.

J. L. BROWN :- SEAFORTH, ONT.

## TEST YOUR EGGS

before you set them under hens or put them in the incubator. Whether you buy or sell eggs for hatching discard every one that does not pass the Magic Egg Tester. Don't try to hatch weak eggs—it kills the profits. Regulates moisture in the egg chamber perfectly. Demonstrated at poultry shows everywhere. This is positively the only way to tell which eggs won't hatch before you begin to incubate them at all. Read on:

## NOT IN YOUR LIFE-TIME

Will you, nor anyone else, hatch one egg that the Magic Egg Tester rejects before incubation. We challenge the world to do it!! "Back to the woods" with unhatchable eggs. Don't sell them. Don't buy them, but do buy this Tester and save eggs, time and money. One year's trial, \$2.00 each. Cost refunded if not satisfied. Newest incubation methods with each Tester.

Magic Egg Tester Works Dept. J. Buffalo, N. Y., also Bridgeburg, Can.

## Single Comb White Leghorns That Lay, Weigh and Win

Your success, whether it be for the introduction of new blood or laying a foundation for your stock, depends upon the reputation of the man behind the firm from whom you secure your stock or eggs. Believing as I do, that the majority of the people are honest, I stand ready at all times to make good, stock or eggs secured from me, any claims that my customers might present. My business at present has reached such proportions, that it is almost impossible for me to meet the demands with the seven thousand head of stock that I have on hand. It is impossible for me to describe our methods of rearing poultry in so small a space, but if you will send for my illustrated mating list, which is sent free on request, you will receive in a concise form our ideas of a down-to-date poultry plant. Or if you will send fifty cents in stamps or coin, I will send you postpaid my 64-page catalogue which explains in detail every phase of the poultry industry. This book, as is everything else bought of the E. W. Grove, Jr. Poultry Farm, guaranteed satisfactory or your money back.

Now is the time to book your orders for eggs and join the list of satisfied raisers of Grove strain of S. C. White Leghorns. All orders delivered in the order in which they are received.

Yours for better poultry,

*E. W. Grove, Jr.*

**Route 1, Clayton, Missouri**

It's not the brand on a horse that makes him travel, nor is it fine feathers on a hen that makes her win or lay, but their breeding.

# Ferris Improved Trapnested Layers

Twelve years ago we became dissatisfied with the best White Leghorns we could find anywhere in the country at that time. They lacked stamina, strength, vigor. No successful effort had ever been made to breed them to quality.

Our first thought after securing the best stock we could buy was to increase the size and vigor of the birds to give a foundation that would permit greatly increased egg production. Our aim from the beginning has been to build a strain that would lay more eggs than the very best of any other breed or strain and yet win anywhere in strongest competition.

It has taken us years of patient effort to get these good qualities as well developed as we have them today. During that time not a poor layer has been allowed in our breeding pens and every year as our experience increased we were able to select our best layers with more certainty and mate them with greater skill. Every year has seen an increase in our average egg yield, until now it is easy to get an average yield of more than 175 eggs a year from a flock of Ferris Leghorns.

## Ferris Selling Plan

We go farther than it has ever been considered possible to go in satisfying customers, not only in quality of stock we furnish in the first place, but in the responsibility we assume of seeing that the birds you buy remain in good condition until they become accustomed to change of climate and to different methods of feeding and caring for them. You can't buy birds elsewhere and exchange them any time within 30 days if they become sick or don't breed properly, or are unsatisfactory for any reason whatever. No one else will replace without question every bird that dies within thirty days.

## Winners For Any Show

We have been winning for years at the largest shows—Louisville, St. Louis, Toledo, Detroit, Pittsburgh, Grand Rapids, and the Michigan, Indiana, Iowa and Tennessee State Fairs—and can furnish winners for any show no matter how strong the competition.

We take great pains to fill every order with exactly as great care as if our customer was right here to pick out the birds himself. If you explain the good points you are most particular about and the bad points you wish to avoid, it makes no difference how many hundred miles are between us, we can select stock that will exactly suit your requirements, provided you do not expect a better bird than it is possible to furnish for the price you pay. The quality of every grade of stock described in the catalog is the best that can possibly be furnished for the price named. We endeavor to give every customer an absolutely square deal, and if you have had experience with White Leghorns so that you know the value of a bird, you will appreciate the fact that the birds we send are from 50 to 100 per cent better than most other breeders send for the same prices.

## Eggs and Day-Old Chicks

We are now booking orders for eggs and day-old chicks for spring delivery. We have never been in better shape to fill orders of any size. Thousands of fine hens in our utility matings and our 25 exhibition matings of remarkable quality will make it possible for us to ship promptly and quote prices that are very reasonable. All infertile eggs replaced free; safe arrival of chicks guaranteed.

## Our Guarantee on Eggs

Our guarantee on eggs is as fair as our guarantee on stock. We endeavor to protect our customers and want you to be perfectly satisfied. When you do not get satisfactory results tell us and we will do everything possible to make it right.

*We Replace all Infertile Eggs Free of Charge.* It is well to be careful that you do not get eggs from late hatched stock that is not mature, for eggs from immature Leghorns are as worthless as eggs from any other breed. If you want eggs from yearling hens we can furnish them, for over half the birds in our breeding pens are yearling hens.

## Can Ship Anywhere

We can ship eggs safely anywhere in the United States, Canada or Mexico, and will guarantee fertility. We ship no eggs more than three or four days old, and nearly all eggs are shipped the next day after they are laid, for during the regular hatching season we usually have orders booked a week or more ahead and we make shipments every day.

## Eggs for Hatching

There is a great difference in eggs for hatching and if you want good results you must be particular to get eggs from stock that has been handled properly. It is very easy for a careless breeder to so handle his stock that the eggs will not hatch well nor even produce strong chicks when they do hatch. Lack of exercise, improper feed, overcrowding and neglect of any of several other important details will decidedly affect the results that can be secured from the eggs.

## Large Even Shaped Eggs

Eggs from all our pens, utility and exhibition, are carefully selected. They are large, smooth, even shaped—the kind that are nearly always fertile and sure to hatch strong chicks. Small eggs—those weighing less than 25 ounces to the dozen—are never sold or used for hatching, and the average will be from 26 to 28 ounces. Eggs with rough or uneven shells do not look well and seldom hatch well, so we discard them. We do not sell eggs that are poor in color. A Leghorn egg should have a white shell, and we do not breed from hens that lay any other kind.

## Day Old Chicks

It is usually better and cheaper to start with chicks than with eggs, because chicks cost only twice as much as eggs and the average hatch from eggs is only about 60%, except in the hands of poultrymen who have had considerable experience and know just how to get the best results. The saving in express charges is also worth considering, as the charges on 100 chicks will be only one-third as much as on the number of eggs required to hatch that many chicks. We can generally ship chicks as promptly as eggs, so there is a difference of three weeks in favor of the chicks—three weeks difference in the time the pullets will begin to lay.

## Distance We Can Ship

Chicks can be shipped 1000 miles with safety, and in some instances where there is fast train service, as high as 1,500 miles. We guarantee safe arrival at any express office within 1,000 miles from Grand Rapids—a radius that includes two-thirds of the United States and Canada.

Our loss in shipping has averaged less than 2% during the past four years, and our customers have had good success raising the chicks, which proves that the stock is hardy and vigorous and that the chicks have not been injured in the least by shipping. In fact, it is much safer to order chicks than eggs because chicks are nearly always handled more carefully than eggs.

**GEORGE B. FERRIS** *The Ferris Leghorn Farm* **905 Union Av., Grand Rapids, Mich.**

# White Leghorns

## That Win Everywhere

There is only one sure way to tell which hens are the best layers, and that is by the use of the trap nests. All other so-called systems of telling good layers from poor layers are failures. Shape of body or distance between the pelvic bones—the basis of all advertised “systems”—are not reliable guides.

Ferris Leghorns have been bred to lay by the use of trap nests. We trap nest both our exhibition matings and our special bred-to-lay matings. We have spent a great many years investigating the laying qualities of our hens and breeding them up to their present high average records, and the minimum egg yield permitted in our bred to lay matings is 185 eggs per year. We have quite a number of hens with records of 225 to 249 eggs during their first year of laying, but we do not attach so much importance to these exceptionally high records as do some breeders.

High record hens are of value only so far as they can transmit their laying qualities and enable a breeder to obtain a whole flock of good layers, and hens with records of much more than 200 eggs a year do not make as good breeders as hens with slightly lower records. It is our experience that hens with records of 185 to 200 make the best breeders of laying stock and are more likely to produce hens that themselves lay over 200. The catalog explains why.

### Bred-to-lay Utility Matings

All our twelve years' efforts to increase egg production are in the breeding of these birds, and although they do not score high enough to make breeders of exhibition stock, they will give you stock that can not be surpassed for laying purposes by any other that can be bought *excepting our bred-to-lay exhibition matings and our trapnested laying pens.*

The difference in egg production between these utility matings and the other matings is very slight; the only difference is that although these birds are bred from the trapnested pens, they are not themselves trapnested.

However, we allow no birds in these pens that are not good breeders. The eggs are big, selected for even shape and color and will produce strong hardy chicks.

We can furnish eggs and chicks in any quantity and the price of eggs will be \$14.00 per 100 during February, \$12.00 during March and \$10 during April. Settings of 15 eggs, February \$2.55, March \$2.25 and April \$1.95.

Day old chicks, March \$28.00 per 100, April \$25.00, May \$20.00. In lots of 25, March \$8.00, April \$7.00, May \$6.00.

For other prices and complete description of these matings

### Trapnested Laying Pens

All of these birds score 92½ or more, for this is the minimum score that we permit in these pens, and most of them score more. The average score is around 93½ and scores of 94 to 95 are not at all uncommon. They are mated to males from the best pens, none scoring less than 93 and they will produce a uniformly good looking flock of heavy layers.

Every bird in these pens is a good winter layer for we discard all that do not reach an average of 14 eggs per month during the winter months when eggs are scarce and high. Ferris Leghorns have a reputation of being the best winter layers of any fowl and we are bound to maintain that record.

If you want trapnested bred-to-lay stock that also is bred reasonably close to standard, you will make no mistake to take this grade.

For the average county fair and small winter shows, these birds will be pretty sure to be among the winners and they are the best layers that have ever been produced.

The prices of eggs and chicks from these pens are just double the price of the utility matings—\$25.00 per 100 for eggs in March and \$56.00 for chicks. For complete information regarding these pens

### Exhibition Matings.

These exhibition matings are *in advance of the standard* so far as some points of shape are concerned; and they are *the only exhibition strain in the U. S. that have been bred to lay with the same care that they have been bred to win.*

What it means to set a high standard of laying below which no hen may go, and at the same time build up a strain that is capable of winning in any competition, only they who have tried to breed winners without regard to laying qualities will understand.

To build up exhibition qualities to a point where it is possible to furnish winners for hundreds of shows every year, and some of these shows the largest and most important in the country, requires the most careful selection of the breeding stock for a long period of years. Not only this, but every point which may affect the perfect development of the stock from the time the eggs are placed in the incubators until the mature fowls are placed in the breeding pens, must be looked after.

You can hatch winners for any show in the world from these matings. The birds shown at the top of this ad will give you a good idea of the quality. For description of each pen in detail and prices of eggs and chicks

# TO THE BREEDERS

that believe in line-breeding, in blood, in the science of breeding, that really great birds are not produced by throwing together a bird from here and a bird from there; to these breeders we wish to say that the **Original Sussex Strain S. C. White Orpingtons** are no conglomeration of purchased birds from the four corners of the earth. Money can make a mushroom reputation for any man that happens to possess the wherewithal, but it will never make him a breeder. Then by what method of reasoning can you convince yourself to purchase from the man that cannot breed his own birds, that has never bred even a good bird himself, that depends each year on purchasing birds with which to win, and from anyone, no matter whom he happens to be or what strain he has, and then puffs out with conceit and the noise of a lion's roar that HE has won so and so. Our word for it, beware of the promoter with the fancy string of winners with a fancy man attached with fancy methods of his own to produce the birds that he has never even seen until he bought them up.

We believe that our rankst enemy would never attempt to put us in this class either by insinuation or otherwise. The **Sussex Strain** had been line-bred for many years before they were even brought before the attention of the public by ourselves, the foundation of the Strain is as strong as the Rock of Gibraltar and any and all traits or claims that we make for any individual birds are embodied in the Strain as a whole and are characteristic of the Strain.

Then how can you convince yourself to buy from the man with the big noise, with a flock of birds that are a conglomeration of Heaven alone knows what, a huckster, who, similar to a gipsy is always ready to swap anything that he happens to possess. A man that knows nothing about breeding and cares less, a jockey.

But to the genuine breeders we desire to ask, do you know what the **Sussex Strain** is? Can you afford not to know? Do you know the value of breeding it in its purity? Do you know the value of the top-cross no matter what strain you are now breeding and the results that it is capable of producing? In the strain that you are now breeding, do you lack stamina, vigor, vitality, size, color, detail, strong blood, massiveness, free and abundant feathering, fertility, type of the true Orpington, egg production? Are your birds weak in the breast, saddle, back and hackle? Are they inclined to be leggy, narrow and with a cut-a-way breast? Are you looking for the wide, low, cobby, massive Orpington with weight and type to burn? Then why don't you try the top-cross with your strain and the **Sussex Strain**, or do you intend worrying along for another year, hoping against hope to produce that which you have never been able to produce? Do you know how the so-called English typed Orpington was produced with its size and abundant feathering?

To the fancier that depends on raising his birds and winning with them and selling stock and eggs, do you realize the value we are giving for little money, the wonderful birds that this strain has produced, do you realize

ize your chances of raising birds from even one setting of our eggs, worth hundreds of dollars and possibly THE great bird of the coming year? We do not publish the names of our customers, neither do we usurp their winnings.

**To the beginner.** Do you realize the value of breeding the purest blooded strain in the world, one with the greatest record of producing the best and greatest birds in the world, the value of breeding a strain that every Tom, Dick and Harry has not got, the tremendous demand there is for the **Sussex Strain** right now? Do you realize that you can start with this Strain and that it will not cost you any more than the cost of starting with birds of but fair quality and no blood? That it is possible for you to jump at one bound with our strain to the highest rung of the fancier's goal? A card for our catalog, a letter for any of our mating lists, an order—our personal attention.

## OUR EGG OFFERING FOR THIS SEASON

will consist of the following matings. The prices depend not only on the demand, but on the rarity of the birds comprising the mating. We cannot recommend anyone of them too highly no matter what the price.

Our **Special Matings** are all made with a strict regard to their lines of blood, with the greatest stress on the real merits of the birds themselves to produce the greatest birds in the world for the coming year.

**REGAL LAD**—The personification of all that is desired as the fancier's ideal cockerel, the culmination of our years of breeding of the **Sussex Strain**. We consider him the most superb living White Orpington male in the world. Eggs, \$30 a setting of 12 eggs.

**LADDIE KID**—Of monstrous growth and size, but with perfect type and detail. Eggs, \$30 a setting of 15 eggs.

**LADDIE MY LAD—LADDIE BEAU**—Low to the ground, short shank and heavy bone, massive and full breasted, broad back and low tails, with the true and ideal Orpington type, the results of this mating will be more than gratifying to all. Eggs, \$20 a setting of 12 eggs.

**LADDIE MAN'S HAREM**—Which we believe to be the loosest feathered and most profuse feathered, both individually and the mating as a whole, in the world. Eggs, \$25 a setting of 12 eggs.

**PRINCE LADDIE—LADDIE BOY—LADDIE KING—LADDIE TRAMP**—Absolutely white and stay white under any and all conditions, with the greatest stamina and vigor, these matings defy competition, with Prince Laddie, our \$2,000 male at the head, weighing 14 lbs. and proven breeder of staying-whites. Eggs, \$15 a setting of 15 eggs, two settings at \$25.

## RUN OF SPECIAL MATING, \$10 SET OF 12 -- EGGS FROM OUR EXHIBITION MATINGS

\$6 a setting of 15 eggs, two for \$9. Every bird in these matings, both male and female, have records of the best, and will compare more than favorably with the matings of any breeder in the world. These matings are not made of a winning male, three or four winning females and the rest unshown females and probably not fit to show and comprising three-fourths of the pen and unrelated and untested breeders at that. No. The birds that we have placed in these pens have not only a record, but they are line-bred birds of the true **Sussex Strain**, owned, raised and bred by ourselves. The prices we ask for eggs from these pens are extremely small compared to what other breeders ask for eggs from inferior matings. Eggs from run of all matings, \$8 a setting, four for \$25.

**Archwood Yards Original Sussex Strain S. C. White Orpingtons—Lay Like a Gatling Gun—Grow Like a Weed** May we have your order, we assure you that you will be more enthusiastic after you have raised your birds and beheld the True **Sussex Strain S. C. White Orpington** than at the time of ordering your eggs.

Pens, Trios, Individual Birds of any Description, \$50 to \$100

**Archwood Yards, J. A. Parker, Cleveland, Ohio**

Breeders with the greatest stud of Orpingtons in the World

## IN ONE YEAR ON A TOWN LOT

is the title of a new book that we have just completed, and is the amount of money actually made in one year by H. Cecil Sheppard of Berea, Ohio, with his chickens, and he tells in a very comprehensive way just how he did it. Anyone can do the same thing if they persue the same method as Mr. Sheppard did.

This book is printed on high-class enamel paper, is profusely illustrated, contains nearly 100 pages of reading matter; bound in cloth, and divided into nine chapters, as follows:

CHAPTER I—THE ROAD TO SUCCESS.....	11
Practical information—Selecting the breed—Start on small scale—Pigeons—Buy good stock to start with—At the poultry shows—Advertising pays well—Importance of advertising—Doubled my capacity each year—Selecting the variety—My actual experience step by step—Living on a town lot—A little paradise in five years.	
CHAPTER II—INCUBATORS AND BROODERS.....	19
Placing the eggs in the incubator—Importance of cooling the eggs—Running the incubator the right temperature—Keep the brooder clean—Preparing the brooder for the chicks.	
CHAPTER III—CARE OF CHICKS.....	23
Don't chill the young chicks—Right temperature the third and fourth weeks—Feeding the young chicks—Green food necessary for young chicks—Charcoal and grit important—Sprouted oats a great egg producer—Perfect winter quarters—Automatic feeders for growing stock—Don't force the breeders.	
CHAPTER IV—POULTRY HOUSES.....	31
Open air houses most satisfactory—Birds singing in zero weather—The ideal chicken park—The necessity of cleanliness—My first eggs four months—Imported the best stock obtainable—How I commenced advertising—My first order for hatching eggs—Chickens laying all fall and winter—Increasing advertising increases business—Good results at end of year.	
CHAPTER V—PLEASURE AND PROFIT.....	33
Sales \$9,515.00 sixth year—Gives up everything for chickens—A square deal for everybody—Building up a good character—The science of salesmanship—The four stages of salesmanship—Good stationery and catalog important—Found it necessary to move to a farm.	
CHAPTER VI—WHAT TO DO EACH MONTH OF THE YEAR.....	45
Care of young stock—Houses thoroughly cleaned and sprayed—Orders and shipments—How to ship the birds—Birds need extra care in November—Getting the birds ready for the show room.	
CHAPTER VII—MATING STOCK.....	51
The male is half the breeding pen—Catalog and mating list—shipment of eggs and baby chicks—How to ship baby chicks—A colony house from a piano box—June end of hatching season—The pleasant smile.	
CHAPTER VIII—THE AMERICAN QUEEN.....	59
Good time to get interested in poultry—Possibilities of the hen—Poultry business offers grand opportunities.	
CHAPTER IX—ORIGIN OF ANCONAS.....	63
Color of the Ancona—Shape—Habits—The fancier's fowl—As a utility fowl.	

The price of this book is \$1.00, but in order to give our subscribers an opportunity to secure a copy, we make the following offer:

Tested Tried and True

## S. C. Buff Orpingtons

**Remember**—Your success or failure depends on the foundation stock. From inferior blood lines you can not produce high grade stock. The higher grade of stock you produce the better prices they will command.

**Bear in Mind**—Roseland Buff Orpingtons represent the finished product of many years of careful breeding. Our whole attention was devoted to their higher development. Just how we succeeded can be better told by our big wins at

Chicago, Pittsburg and Cleveland

**Our 1913 Matings**—We believe some of the best Buff Orpingtons ever bred will be from our 1913 matings. Every one of our 20 or more matings will be headed by a prize winner or a bird sired by a prize winner. The same can be said of every female. Before placing your order we want you to send for our mating list. If you want winners get Roseland strain, the tested, tried and true strain of quality. **Breeding Stock for Sale.** Grand breeding birds for sale at reasonable prices..

## Fluffy Ruffles Barred Rocks

The World's Champion Strain Continues to Win Wherever Shown

"FLUFFY RUFFLES"—The \$1,000 hen, and her kin have won for me and my customers more prizes at Madison Square Garden in five years than any other strain.

This record does not include Specials or winnings of my customers. No other pullet line has ever equalled this continuous win.

"Fluffy Ruffles" Strain is Winning Now for My Customers, for Me, and Will Win for You

I am in a position to furnish from this World's Champion Female Line choice selections of Stock or Eggs to all those wishing the best. My line of males for this season is headed by the 1st Cock at Madison Square Garden, 1911. This winning stamps him as the finest specimen of this variety in the world. For prices of the above phenomenal strains write, mentioning American Poultry Journal.

## Again Win at Chicago

Rose Comb Rhode Island Reds

Our Recent Winning Great Chicago Show—1st hen; 2d young pen; 4th pullet; 5th old pen; 5th cock; shape and color special on female and Champion Female in the strongest competition ever seen at Chicago.

At the Chicago Show, 1911

We won 1 cock; 1 cockerel; 1-3 pullets; 1 young pen. In the past two years we have won more than twice as many firsts as any other exhibitor at this great show.

At Louisville, Ky., Dec., 1912

Where the north, south and west met, we won, 1-2-3 cocks; 1 hen; 2-3-4-5 cockerels; 1-2-3 pullets; 1 old pen; 1 young pen and Silver Cup for best display. If you wish birds of quality or eggs that will hatch them, write us. Mating list now ready. Stock on approval always.

Longfield Poultry Farm, Box 321, Bluffton, Indiana

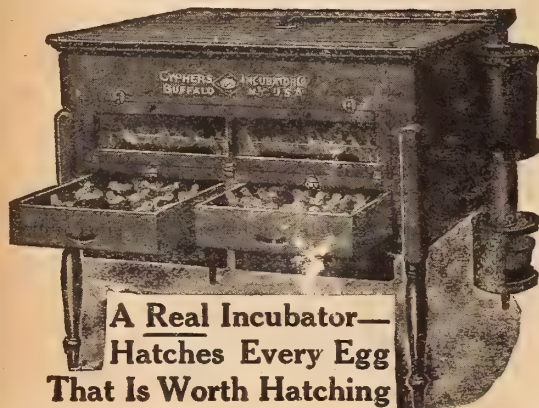

# Cyphers Company

Makers of the "World's Standard"  
Incubators and Brooders

EVERY year Cyphers Company numbers among its new customers a *great many* who have tried other makes *unsuccessfully*—who have finally *realized* that poultry-raising is too serious a *business* to attempt to get along without standard tools and right methods.

This message is intended especially for dissatisfied incubator and brooder owners who are *not* getting the results their invested time and money *deserve*.

## 1293 Fertile Eggs—1266 Chicks

Battle Creek, Mich., March 11, 1912

Cyphers Incubator Co., Buffalo, N. Y.

The two Cyphers Incubators I purchased of you have given excellent satisfaction. Here are the results:—

First hatch, 236 chicks from 244 fertile eggs; second hatch, 204 chicks from 204 fertile eggs; third hatch, 199 chicks from 205 fertile eggs; fourth hatch, 232 chicks from 242 fertile eggs; fifth hatch, 178 chicks from 178 fertile eggs; sixth hatch, 217 chicks from 220 fertile eggs.

Naturally I am pleased with the work these machines have done, and will recommend the Standard Cyphers to any one wanting THE BEST MACHINE FOR HATCHING STRONG, HEALTHY CHICKS—AND LOTS OF THEM.

ALBERT G. KOVEN.

## 2059 Fertile Eggs—1985 Chicks

Fowler, Vt., August 19, 1912

Cyphers Incubator Co., Buffalo, N. Y.—

I am sending you herewith a record of this season's hatches in my No. 3 size Cyphers Incubator:—

April 6, 287 fertile eggs, hatched 273 chicks; May 1, 319 fertile eggs, hatched 302 chicks; May 24, 370 fertile eggs, hatched 354 chicks; June 17, 368 fertile eggs, hatched 361 chicks; July 10, 350 fertile eggs, hatched 342 chicks; August 2, 865 fertile eggs, 353 chicks.

I have also been using your Cyphers Brooders and lost very few chicks. IN THE SPRING I AM GOING TO ORDER SIX MORE OF YOUR BROODERS.

WM. MILLS

## Cyphers Style B Outdoor Brooder

"After Trying Six, Purchased Seven More"

Franklin, Mass., August 25, 1912.

Cyphers Incubator Co., Buffalo, N. Y.

After thoroughly trying out six of your Style B Outdoor Brooders, we purchased seven more, and they have done satisfactory work. Your Brooders are certainly the best. Your self-regulating and self-ventilating system produces just the right conditions for the chicks at all times, and as a result the chicks are strong and vigorous, ready to mature into profit-making fowls, whether for market purposes or for the laying and breeding pens. Have operated Standard Cyphers Incubators for TWELVE YEARS WITH THE BEST OF SUCCESS.

OAK KNOLL FARM, Ora R. Lincoln, Manager.

And it's intended for the discouraged and disheartened ones on the brink of giving up, who have been *defeated* thus far by cheap equipment.

*Start right!* That *sums up* the biggest, most vital truth in poultry-raising. It is simply *time and opportunity suicide* to attempt to get along with makeshift and make-believe appliances.

## Remember Always that Real Quality is Worth Its Price

And the moderate investment required to be properly equipped with Cyphers—not only insures best results—intelligent methods—shuts off losses, but it represents also a *real* economy that stretches over the years to come.

Reader, the question is *not* can you afford to own Cyphers equipment. The question is can you afford for a single hatch in a single season to be *without* Cyphers equipment? Thousands of successful Cyphers owners—large scale and small—answer this question *for you*.

### "First-Class In Every Respect"

Glassboro, N. J., June 14, 1912.  
Cyphers Incubator Co., Buffalo, N. Y.—

Some time ago I purchased three of your Self-regulating and Self-ventilating All-metal Adaptable Hovers. They certainly have proved themselves to be first-class "foster mothers" in every respect, and are not to be compared with another make of hover which I have been using. With the other I would find some dead chicks almost every morning, and must say that for "death traps" they certainly took the prize. Have lost practically none of my chicks with your Adaptable Hover.

GEO. W. MURPHY.

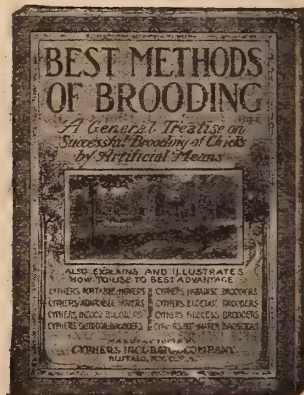

## Cyphers Adaptable Hover

"Did Poultry Industry a Big Favor"

Versailles, Mo., August 2, 1912.

Cyphers Incubator Co., Buffalo, N. Y.—  
In my opinion, you did the poultry industry a big favor when you invented the fire-proof style of brooders. My personal experience has been that your BROODERS CAN NOT BE EXCELLED. The Adaptable Hovers purchased of your Company are the BEST BROODING DEVICES I HAVE USED. I do not see how any up-to-date poultry raiser can get along without them. Have used several different makes of brooders, but have practically discarded everything but those of your manufacture. Would not again be without your Self-regulating Adaptable Hovers. No more cheap, "hand-me-down" brooders for me.

L. W. KIRSCHSTEIN.

# Poultry Equipment

*In Every Case "The Best Article For the Purpose"*

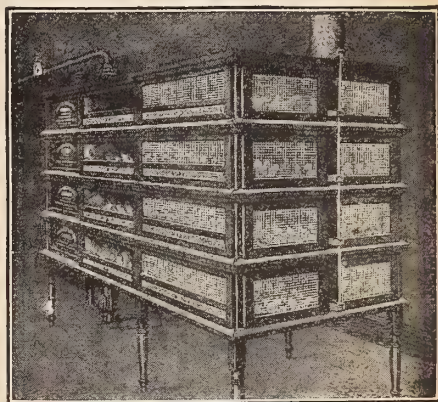

**W**E HAVE never compromised with results! We have never hit a half-way stopping point. From the first, we have realized that our big and lasting success would be exactly in proportion to the big and lasting success of our customers. We could not afford to place in their hands an article that was not absolutely the best—the right thing—without hazard or question.

We have realized our ambitions for ourselves—simply and solely because we have enabled Cyphers users to realize their ambitions.

Today we stand on that same platform—*"The Best and Most Practical Article for the Exact Purpose—the Right Tools with Which to Work—These Spell Success."*

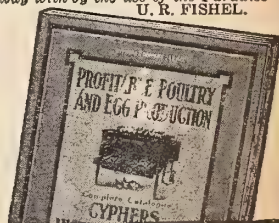

There is more money in right-method Poultry raising today than there ever was before. There is no need of failure on any one's part. There are no steps in the dark that have to be taken before you see the light. Our equipment, our continual counsel and advice, founded on bed-rock experience, will help you in a hundred ways.

*Begin right—and we will keep you right. Is not the offer fair?* The first step toward better poultry success is to

**Indoor Sectional Brooders**

"I have been wanting to write you of the splendid success I had with one of your four-section Paradise Brooders. We have always heretofore had quite a loss among our little chicks for the first ten days of their lives, and it seemed to me that your Paradise Brooder would stop this loss, which I am pleased to say it did. We carried something like three thousand chicks through the Paradise Brooder and our loss was not over twenty chicks out of the three thousand. The first four hundred and fifty chicks run through this brooder resulted in a loss of but four chicks. I think the death rate in baby chicks can be almost entirely done away with by the use of the Paradise Brooder."  
U. R. FISHEL.

## Send Today For Our Big Free 1913 Poultry Guide

It strikes straight at the heart of "Profitable Poultry and Egg Production"—gives you in plain words and pictures the right methods, the newest development, the actual results verified on the Cyphers \$75,000 Poultry and Demonstration Farm. Here are the titles of Eight Invaluable Chapters:

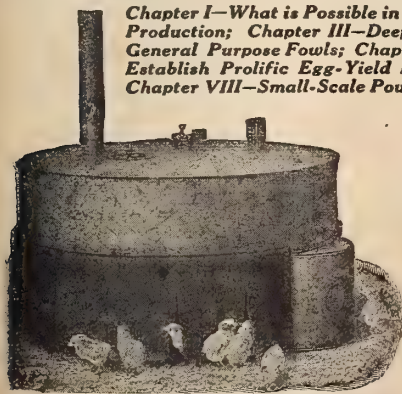

**Chapter I—What is Possible in Poultry Meat Production; Chapter II—What Can Be Done in Way of Egg Production; Chapter III—Deep-Litter Feeding Experiments of 1912; Chapter IV—Quick Maturity in General Purpose Fowls; Chapter V—Ages and Weights of Chickens for Table Use; Chapter VI—How to Establish Prolific Egg-Yield Flocks; Chapter VII—Today's Best Chance in the Poultry Business; Chapter VIII—Small-Scale Poultry Keeping on a Practical Basis.**

Send now for this greatest Free Poultry Book ever published, and all the facts about Cyphers Co.'s Free Bulletin and Personal-Letter Service that makes doubly sure the success of Cyphers owners.

BIG 1913 BOOK contains 244 large pages and over 500 illustrations. Address our place of business nearest you, or use coupon herewith.

### FIRE INSURANCE LABEL!

Remember that every Cyphers Incubator has been passed on by expert engineers, representing the National Board of Fire Underwriters and that each and every machine bears the brass "Inspected Incubator" label. The label talks! Other manufacturers can claim that their incubators are fire-proof, and have been approved, but the Official Label is what counts. Without it their claims are simply "hot-air".

**Cyphers Portable Hover**

New and Handy Device for Brooding Chicks on Floor Level of Poultry Houses, Colony Coops, etc. ONLY SELF-REGULATING AND SELF-VENTILATING PORTABLE HOVER ON THE MARKET. Write for Special Circular and Prices.

Jim Rohan and His World's Championship Winners

Let  
me put  
**You**  
in this  
World's  
Champion  
Class

# Let me tell you how

## these champions hatched 140 Chicks From 140 Eggs

# I Want Your Photo Here

Here's  
plain  
common  
sense:

You want an incubator that will hatch every fertile egg.

And you want a Brooder that will raise every chick, if such machines are built. You are going to buy the Incubator that you believe is better than all others. That is plain good judgment. Good incubators cost so little and last so long that you can't afford not to get the best!

Now here's my proposition: I want to give you facts and proof! I don't want to take up your time here with empty arguments. You haven't time now for dilly-dallying. The time is now here when you must get busy with your hatching. You want an early hatch. You can't afford to lose time experimenting.

Follow the lead of Uncle Sam. The U.S. Government is among my 201,840 customers! Surely the machine good enough for Uncle Sam is good enough to make money for you! I want to send you the proof that my Belle City Incubator is the best. I want to give you the proof that it has produced a chick for every egg—not luck shots, but time after time! I want to prove to you that all of these World's Championship winners and thousands of others are getting 100 per cent hatches with the Belle City Incubator.

I want to send you the most remarkable incubator and brooder news ever published. I want to send you all the facts about my 6-time World's Champion Belle City Incubator. I want to show you how to get into the World's Champion Hatching Class. I want to tell you how to make the most profit out of poultry right from the start and at the least possible cost. Let me tell you how my

This is the Tycos Cup won by my Belle City Incubator in the World's Championship Contest for best hatches, beating incubators costing two to five times more.

"Tycos Cup"

# You

can get record hatches just as easily as these World's Champions. I will show you how.

I want to tell you how I give you 1, 2 or 3 months test right in your own home, and my liberal, personal 10-year guarantee and money-back offer. Won't you write me now? Just mail me a postal and I'll send all this information and more, absolutely free.

# World's Champion Belle City Incubator

is made—how they are different from all others, how I have embodied in them everything worth having in and on an incubator—the features that have made the Belle City the 6-time World's Championship Winner!

My 140-Egg World's Championship Belle City Incubator has Oakes double disc self-regulator, correct hot water heating system, copper tank and boiler, safety lamp, double walls and double door, with dead air space all over, with roomy nursery and strong egg tray. Of course, the thermometer is right; I use the "Tycos." I also supply egg-tester, Edw. Miller sun hinge burner, funnel, everything you need including valuable instruction book on operation, hatching

and care of chicks.

And I want to tell you all about my famous 140-Chick Belle City brooder—the only double walled, hot water, top heat brooder made, guaranteed to raise largest percentage of chicks every time—a fitting companion to my World's Championship Belle City Incubator.

## My Price Sensation

You may wonder at the remarkably low price at which I sell my machines direct from factory. I want to tell you how I send them all freight prepaid east of the Rockies and freight allowed that far on shipments beyond.

We Ship Quick  
from St. Paul,  
Kansas City,  
Buffalo or  
Racine.

Freight

## Just Drop Me A Postal—Now!

I will send you by return mail the proof that my World's Champion Belle City is the Incubator that will pay you the handsomest returns!

If you're in a hurry—if you don't want to wait for all this proof, you can order direct from this advertisement. I tell you how my machines are made, and give you my money-back guarantee. The editor of this paper, or any bank or express company will tell you your money is perfectly safe and I'll do just as I say I will. I ask you to send only \$7.55 for my 140-egg, 6-time World's Champion Belle City Incubator—the best you can buy at any price, or \$4.85 for the 140-chick Belle City brooder. You can order both together if you wish, and save more money at my unheard-of low combination price—send only \$11.50 when both are ordered together.

Don't turn this page without either writing to me or else tearing out this corner as a reminder. Whether you order or not you get all my valuable World's Championship hatching facts absolutely free! But be sure to write me today. Just say, "Send World's Championship Hatching Facts," or order now and save delay. I guarantee to ship machines same day your order is received. Satisfaction guaranteed. Address Jim Rohan, President,

Belle City Incubator Co., Box 27 Racine, Wis.

Brooder equipped with wire runway not shown in cut. Note hot water top heat system.

## PRICES

**Biggest Price Wrecking Sale**  
in the history of this Company.  
An excellent opportunity to  
save 30 to 50 per cent.

Never again will such remark-  
ably low prices exist. Don't  
delay—Send your order at  
once or write us. Act now.

### ROOFING

### Smashing Bargains

### FENCING

#### Corrugated Steel Roofing 1 1/4c Per Square Foot

Here is the chance of a lifetime to buy the best roofing in the world, at a mere fraction of its real value. Our enormous buying power enabled us to pick up for spot cash a stock of this brand new, perfect corrugated, "V" crimped and Standing Seam Roofing and Brick Siding, at a tremendous sacrifice—way under what it is actually worth. Immediate cash needed made possible this purchase. Just another chapter added to the long list of our famous bargain sales.

#### Corrugated Steel Roofing Practically Indestructible

There is nothing else that compares with corrugated steel roofing for real protection. It makes a long, lasting roof. Is fire, rain, frost, wind, sun and lightning proof—warmer in winter—cooler in summer and under ordinary circumstances does not leak, rot or warp, neither does it taint rain water. You can depend upon it that Corrugated Steel is the best material for roofing, siding and ceiling.

At 1 1/4c per square foot, we furnish our grade AB-700 Steel Roofing, in sheets 22 x 24 inches x 1 1/4 inches. This price is delivered on board cars at Chicago.

#### Galvanized Steel Roofing 2 3/4c Per Square Foot

Another big Steel Roofing Bargain. Several thousand squares of the very highest grade specially coated, corrugated, galvanized roofing and siding, made of specially prepared steel, of superior quality. Best roofing, and will last indefinitely. We will furnish it in suitable lengths for any purpose. Only a limited quantity on hand, so we urge you to send us your order immediately. Don't wait to write us again—order today, while this stock exists. Price only 2 3/4c per square foot, and will outlast 4 to 1. Just drop us a line, and tell us the size of your studding and general facts, and we will help you to select proper sheets. If you are not ready to use the material now, we will reserve it for future delivery, if you will give us a small deposit on account. This price of 2 3/4c per square foot is for our Lot AB-800 corrugated material, and is delivered on board cars at Chicago. If you prefer some other style, we will furnish it. We have this same grade in "V" crimped, Standing Seam and Brick Siding. Samples on application.

#### Ready Roofing With Supplies 62c Per 108 Square Feet

We have several thousand squares of a superior quality Ready Roofing, which we are offering in our AJAX BRAND, 1-ply, at a price of 62c per square of 108 square feet, including necessary cement and caps to lay it. This is undoubtedly the most remarkable bargain ever offered in Ready Roofing. This famous brand is put up 3 or 4 pieces to a roll. The price of 62c per square of 108 square feet is loaded on board cars at Chicago. We will, however, make a freight prepaid price on this same grade of roofing, including nails and necessary cement of 75c per roll of 108 square feet, and at this remarkably low price

#### We Pay the Freight

to full to any point east of Kansas and Nebraska and North of the Ohio River.  
We will also furnish 2-ply, at 90c; 3-ply, at \$1.05.  
This Ajax Roofing is guaranteed to wear as long, and give as good service as any Rubber Surface roofing on the market.

#### Send for Special Roofing Catalog and Samples

Write at once for our Special Roofing Catalog. Free samples and full instructions for laying roofing.

#### Explanation

The Chicago House Wrecking Company known to the commercial world as the "Great Price Wreckers" is easily acknowledged the bargain house of the earth.

Our Mammoth plant covers 40 acres, and our list of customers are numbered by the hundreds of thousands, and include people from every walk in life. We sell practically everything under the sun at unbeatable prices. We buy our goods at Forced Sales, taking advantage of Sheriffs, Manufacturers' and Auction Sales. In this way we can sell brand new, clean high-grade goods at prices, in many instances even less than the cost of manufacture.

#### Our Guarantee

Our capital stock is \$2,000,000. Any bank or Commercial Agency, or any publisher will confirm our responsibility. We have advertised in this paper for many years. Ask its publisher what he thinks of the Chicago House Wrecking Co.; get this personal opinion of the values, and our square methods of doing business. We guarantee each and every article that we sell to be exactly as per our representations. Should you buy anything from us that fails to come up to our representations, or does not agree with your expectations, we will take back such unsatisfactory merchandise at our freight expense. We want satisfied patrons.

## LUMBER

Complete houses and barns at an enormous saving. Never before in the history of Building material has such an opportunity existed. We offer high grade, brand new complete lumber and building material needed for the construction of houses and barns at lower prices than ever before.

#### 20,000,000 FT. of New Lumber at Our Yards and Warehouses Ready for Quick Delivery

We have upwards of twenty million feet of first class, brand new lumber for the construction of buildings of every kind. A wonderful stock of the very finest millwork, interior trim, etc. enough material to construct cities and villages everywhere. It is our determination that this will be the "Banner" year in the history of our Great Lumber and Millwork department, and the way we will accomplish this, is by quoting prices that undersell any possible competition. The proof of this is in our catalog and literature.

Write today and tell us which you contemplate improving or building during this Spring—talk to us plainly, and we promise you the advice straight from the shoulder. No other concern in the world is equipped such as we are. Right in our main yard and warehouses, at Chicago, we can load you out complete, at one time, and one carload, every single article required for the improvement of the building you have in mind. No where else can you go and get such service.

#### Personal Service To You

You can get the kind of service that will give you absolute satisfaction—satisfaction from the word "go." If you have ideas of your own as to the kind of building that you want, we will give you the benefit of the Great Architectural Department in the world. We will furnish you with plans according to your own ideas, and will quote you a price on the material that will make you a wonderful saving. Dollars saved are dollars earned.

Write today for our Book of Plans and Latest Catalog of Building Material and Supplies.

#### Brand New WIRE FENCING Less Than 1c Per Running Foot

Biggest of all offers of the past. We come to you with the most wonderful proposition ever known, and offer you the very best woven wire fencing at a fraction of its real value; lower in price than ever before, not withstanding that all other merchants and manufacturers have advanced their prices on fencing. We are determined to simply get all the business in sight, and with that in view, we bought up from manufacturer's sales, 150 carloads of High Grade Woven Wire Hog, Cattle, Field and Poultry Fencing, Barb Wire and Nails, in quantities sufficient to take care of our regular customers and those who will quickly respond to this advertisement.

#### Barb Wire Less Than 2c Per Rod

Galvanized, two-point Barb-Wire, full weight (not the light kind) put up regular on spools, containing about 100 lbs. to a spool. It is made of No. 12 1/2 wire, with good weight bars. Price per 100 lbs. during this sale, only \$1.95. Order by Lot No. AB-600. Several thousand spools of this Barb Wire, Painted, price per 100 lbs. \$1.75. Order by Lot AB-500. Also have in stock 1000 spools of light weight, new galvanized barb wire, put up 30 rods to the spool, made of No. 14 galvanized wire, No. 12 bars, bars 5 inches apart; price per spool of 80 rods \$1.45. Lot AB-400. We also have several other bargains. You never had a chance like this before, and we advise that you send us your order today. Don't wait until the material is sold—we cannot hold this quotation open.

#### Galvanized Hog Fencing AT A MATERIAL! REDUCTION IN PRICE

100,000 rods of 25 in. Galvanized Steel Spring Wire, 25 in. high, hog fence, put up in 10, 20, 40 and 60 rod rolls, made with 7 bars, spaced 12 in. apart, with No. 9 top and bottom wires, No. 11 intermediate wires, heavier than the regular fencing offered. Price per rod, during this sale, only 15c. Order by Lot AB-900. Same fencing spaced 6 in. apart, per rod during this sale, only 2 1/2c. Order by Lot AB-1000. Other heights at proportionately low prices.

#### High Grade Poultry Fencing 48 in. High 27c

A complete stock of all heights of Woven Wire Fencing for every purpose. Do not delay your order, but send it in at once, even if you are not ready to have it shipped. We will hold the material ready to deliver when you want it.

#### Several Carloads of Galvanized Wire Shorts

This is smooth wire, put up 100 lbs. to a coil, first-class for general use. Comes in sizes from 6 to 15 gauge. Price for 9 gauge, \$1.25 per 100 lbs. Lot AB-1200. Other sizes in proportion.

#### Some Big Bargains in Nails

At last we have the bargain of bargains. 10,000 kegs of genuine galvanized wire nails; will outlast all other kinds. Put up in regular kegs. Price per keg of 100 lbs., as follows:

10 pennyweight, \$2.00 8 pennyweight, \$2.10  
6 pennyweight, \$2.15 Shingle Nails \$3.00

Also 5,000 kegs of Nails, mixed all kinds in a keg; good assortment, handy to have around your workshop. During this sale only, per 100 lbs., \$1.45. Order by Lot AB-1100. We have other bargains in nails.

Also, in this same job, we have 5,000 kegs of Fence Staples, galvanized; per keg, \$2.00. Lot AB-1400. Crimped wire for reinforcing, cut to any desired length; per 100 lbs., \$2.25. Lot AB-1300.

We have bargains in every line. Write us today for our Wire and Fence Catalog, but the best thing for you to do is to send your order now, and we will hold for shipping instructions.

# DR. PRINCE T. WOODS' NEW BOOK

## How to Raise Chicks

### INCLUDING REVISION OF "FACTS ABOUT WHITE DIARRHOEA"

A down-to-date manual on breeding poultry, getting hatchable eggs, incubation and brooding both natural and artificial, preparing chick foods, feeding chicks, how to raise chicks and how to avoid and prevent disease and losses. Told in plain language. Illustrated with reproductions from photographs and pen drawings. Tells how to make your own brooders and chick foods. Written by a man who knows how and how to teach others. 88 pages, 35 illustrations and 5½x8 inches in size. Printed on good paper. Well and durably bound in cloth.

### A Book for Everybody Who Keeps Fowls or Grow Chickens Whether Beginner or Old Timer in the Field of Poultry Work

It has ten chapters: Chapter I—Selecting and Mating Breeding Stock. Chapter II—Food, Vegetable, Animal and Mineral. Chapter III—Fowls and Food. Chapter IV—Care and Management of Breeders. Chapter V—Eggs for Hatching. Chapter VI—Incubation, Natural and Artificial. Chapter VII—Brooding with Hens and with Brooders. Chapter VIII—Chick Foods and Feeding Chicks. Chapter IX—Growing Chicks. Chapter X—Facts About White Diarrhoea. What white diarrhoea is. Symptoms of disease. Causes. Is there more than one form? Has germ of specific disease been found? Infection. Prevention. Treatment. Formula for a simple remedy which has proved effective in many cases in many climates for four years.

Here is a book devoted to chick comfort and to more and better chicks, 75 cents per copy postpaid. Learn to save your chicks; that means more profit; Dr. Woods tells how; send for the book now, only 75 cents, cloth bound.

75c per copy, postpaid; with American Poultry Journal, one year, only \$1.40. Canadian subscribers add 25c for postage, foreign 50c.

# FREE

Send in your order today for Day-Old Chicks, Hatching Eggs and Eight-Weeks-Old Chicks. Free booking. No deposit required. Insures shipment when wanted. Prevents disappointment.

## Pittsfield Barred Plymouth Rocks

The strain that makes money for you. Greater than ever. Holds unapproached laying records. One customer's pen laid an average of 249 eggs per hen—three times the average per hen for the U. S. Pittsfield Rocks are the earliest maturing strain. Pullets have begun laying in 96 days from hatching, instead of requiring eight months or more. These are customers' records made under conditions that you can duplicate. They are not records made by professional experts with ideal surroundings. No wonder the poultry world is rushing to Pittsfield Strain since it proves more profitable than any other yet developed.

### Day-Old Chicks

We make any size shipments anywhere and guarantee safe arrival. Last year the demand was so heavy we were sold out two months ahead. We have more layers now, greater incubator capacity, but the sure way is to book your order today when you write for prices.

### 8-Weeks-Old Chicks

The convenient way to get high quality stock. Avoids chances of stunted or deformed chicks. Avoids losses due to poor hatches and brooding accidents, as well as to improper feeding, unfavorable weather and such natural causes as rats and hawks. Saves owning brooders as well as incubators. The only plan that guarantees all pullets.

### Eggs for Hatching

We invariably fill orders with hatching eggs laid the same day that shipment is made. We ship any distance—frequently to the Pacific Coast. Safe delivery guaranteed. See that you have your order booked now. We use the utmost care in packing, insuring fresh hatchable conditions, as well as safety. Eggs from our special pens of prize winners can be had. Our Pittsfield birds won more prizes at Boston this year than any other Barred Rocks.

or stock that will not mature properly. Avoids losses due to poor hatches and brooding accidents, as well as to improper feeding, unfavorable weather and such natural causes as rats and hawks. Saves owning brooders as well as incubators. The only plan that guarantees all pullets.

**"Money-Making Poultry"**—Get this great, free, helpful poultry book. New edition, illustrations, new facts, along with the old truths. Explains our feeding system and tells you how to adapt our simple methods to your own profits. If you want the latest word in poultry handling, you should certainly have this book—not like most poultry books.

**\$225 in Prizes to be Given Away**—Our great "First Eggs" contest, to see how early Pittsfield pullets will lay for our customers, is under way. Send for details. Write us about your needs—day-old chicks, hatching eggs, 8-weeks-old chicks, Utility and exhibition stock. Quality always high. Prices reasonable. **Pittsfield Poultry Farm Co.**

# Leading S. and R. C. R. I. Red Specialist of America

**"DeGraff Book on Reds," International Authority on Reds, 3-Color Plates True to Life, 25c Postage. 50 Breeding Pens for Eggs.**

**I Stand Ready to Take Your Orders for the Best R. I. Reds on Earth, and Guarantee Safe Delivery to Any Part of the World**

I know not how I could give stronger testimonials than these below, as there is no higher authority on Reds in U. S. than I, W. Bean, and if I was not doing an honest business our P. M. would be the first to get proof of it.

Drop postal for my mating list, which gives much information about Reds.

Amsterdam, N. Y., Aug. 7, 1912.

Gentlemen:—

For the purpose of giving some information in regard to Edward T. DeGraff, I will give the following facts:

He has served over 20 years in the banking business. He has been Treasurer of Montgomery County Historical Society for over 6 years, and been Treasurer of several social clubs, which proves we can trust him.

He collected and expended the wheelmen's money for 8 years during which time he constructed over 15 miles of first class cycle paths without charging anything for his services.

He has received mail from all parts of the earth through this office for 10 years and to my knowledge there have been but two trivial complaints brought to the attention of the Post Office Department, both of which he attended to promptly.

Respectfully yours,

THOS. LIDDLE,

Postmaster of Amsterdam, N. Y.

**To Whom It May Concern:**

While I have known for a long time personally and sold many birds to E. T. DeGraff, of Amsterdam, N. Y., still I have never been able to visit his farm till today, and I feel well repaid for coming, as there are many features about this farm that I believe can not be seen elsewhere. While at Boston Show I accepted his invitation to inspect and assist in mating some of his best breeding pens for 1913, and after handling some of his best birds and taking into consideration the large number of Reds of both varieties, none of which I could say were not fit to breed from, I feel safe in saying I could not dispute his claim of having the "largest and best flock of Reds on Earth."

Like many others my curiosity had been aroused by the many good and bad things I have heard about this man DeGraff, and for the information of others who can not personally inspect this farm, I will state the following facts, as I saw them:

I found all fowls housed in open front houses with muslin frames attached, and I failed to see a sick bird in the flock, which numbered over 1000 birds and judging by brilliancy of plumage, and general redness of flock, I believe the fertility of eggs sold from these birds should be very satisfactory, as no forcing for egg production during winter is practiced, so that a full crop of strong germated eggs will be laid in spring for hatching. I personally handled pens of 10 to 12 females each, that would average in quality with some of the prize winners at Boston and New York Shows, while the pedigree specimens are about as strong breeding quality as I have ever handled.

After inspecting what will be the 50 breeding pens as listed in circular, comprising S. C. and R. C. Reds, all headed by first class males selected to blend to best advantage with females, in each pen, I was shown his cockerel house in which I saw over 200 males of various ages to be sold and shipped to all parts of the world.

Anyone who doubts the facts that Reds can be bred in large numbers and have what can really be called red, should inspect this bunch of dark necked harmonious males, as the three colored birds are noticeable by their absence. The flock of hens I saw here will

average darker than any large flock I ever saw, and should make very valuable breeders judging from their type and appearance.

There are many smaller breeders who have fine specimens in their flocks all over the country, but the one point that impressed me here, was that DeGraff not only had his special pens to produce his stock for next year (and he will use many different pens himself) but that he has so many good birds that he can spare eggs or stock from his very best, to those who are willing to pay what they are worth, and not cripple his own flock.

DeGraff claims he has been working for over 12 years to get in the position to be able to do a legitimate fancy poultry business on a large scale, and endeavor to give every customer a square deal (as near as the shortcomings of nature will allow) and I believe when the fact of his large flock is taken into consideration with his untold educational stunts, he has pulled off for the benefit of the breed, that his advertised claim of "The Leading Red Specialist of America" is not an idle boast.

While I have never been an extensive advertiser I was much interested to see the practical results that can be accomplished by extensive advertising, which he has done in a style entirely original with himself. Of the 90 letters received the day before, I noticed about 25% were postal inquiries, 25% regular inquiries about orders, and 50% containing orders in payment of his color plate catalogues, showing people are willing to pay for a high grade article, even in the advertising line, when properly put up for them.

I can readily believe, that it is true, that no breeder in the last six years has kicked on his investment of 25c for this Book on Reds after he had seen and read its contents. From what I saw of the prospective "DeGraff's 1913 Book on Reds" it will be the finest thing of its kind ever printed, and contain information and pictures that no breeder can afford to be without, and more pictures will be framed and preserved than will ever be thrown away.

There are few farms so naturally adapted to the poultry business as this one, and when he has his 500 foot winter house completed, which is now partly done, and more under construction today, together with the 600 apple tree orchard colonized for summer, all of which has running water piped to all parts, there will be little lacking to make this an ideal poultry establishment for carrying out the unlimited possibilities that this true fancier of undownable enthusiasm has planned for the years to come.

I also saw and heard about the other branch farms that are raising DeGraff's Reds under his supervision, so that I believe it will be possible to fill any and all orders that may result from his extensive campaign of advertising planned this spring, with first class quality eggs even to 1000 a day if need be at certain times.

I trust this little testimonial to DeGraff, his Reds, his farm and his business methods may assist in some small degree in restoring a good friend, an enthusiastic and capable fancier and business man to that position where he will again have the confidence which he merits of his prospective customers.

He has been dealt with all too harshly in the few years just passed, but the tide has turned and now let those of us who believe in fair play and a "square deal for every man" be as ready to commend as so many unthinking ones have been to decry.

Yours very truly, I. W. BEAN.

Braintree, Mass., Jan. 26.

**DeGraff Poultry Farm, Leading Red Specialist of America, Box 200, Amsterdam, N. Y.**

# AMERICAN POULTRY JOURNAL YEAR BOOK FOR 1913

**Being a Comprehensive and Authenatic Review of the Poultry Industry for the Year 1912—All Thoroughly and Carefully Indexed for Instant Reference. Including a Practical Encyclopaedia on Poultry Culture.**

## PUBLISHERS' ANNOUNCEMENT.

With the event of a billion dollar poultry industry in the United States, the publishers of the American Poultry Journal think it about time that a reliable and authentic Year Book or Annual should be published in this country. Many smaller industries—some of them many times smaller—have one or more Year Books published in their interests and these industries liberally support and encourage their publication and sale, as it has been found that the circulation of such books tends to create new interest and promotes its advancement before the general public.

It is the intention of the publishers to issue a Year Book annually for the great and growing poultry industry of this country, and we feel confident that it will be well received, as it will fill a real need that should have been attended to many years ago, and the entire editorial staff of the American Poultry Journal will devote its best efforts to make it worthy of a place in every poultryman's library. With such an organization of experts behind it—with the equipment in materials, statistics, trained clerical force, books, artists, practical and expert writers—must, in the very nature of things, produce a book that will fully and truthfully represent our great billion dollar industry.

## SOME PROPOSED FEATURES.

**OUR CONTRIBUTING EDITORS.**—The entire editorial staff—conceded to be the best staff of poultry editors connected with any poultry paper—will lend a helping hand in the completion of the Year Book, and it goes without saying that such a brilliant aggregation of poultry experts will produce a Year Book of inestimable value.

**THE POULTRYMAN'S ENCYCLOPEDIA.**—Will be composed of about 300 questions and answers, with complete definitions of all the technical words and terms used in the poultry industry. Edited by Dr. Prince T. Woods, with the assistance of the entire editorial staff. This feature will be a great help to the amateur and professional breeder.

**FEEDING FORMULAS.**—All the new and best feeding formulas that appeared in 1912 will be published. This feature will cover the entire subject of feeding poultry for all purposes including winter egg production, feeding for the show room, for the market, young chicks, crate feeding, cramming, etc., by the best experts in this country and Europe.

**DIRECTORY OF EXPERIMENTAL STATIONS.**—Will contain a complete list of all the poultry experimental stations of this country with names of managers, who supports them and what they accomplished during 1912, and interesting and instructive articles by their managers will be in the great American Poultry Journal Year Book for 1913.

**POULTRYMAN'S CALENDAR.**—What to do each month in the poultry yard, conducted by Mr. Prince T. Woods, managing editor of the American Poultry Journal. This will be a thorough and practical treatise on raising chickens and will tell in plain words just what to do each month of the year. This one feature, compiled and edited by the best practical expert in this country, will be invaluable to both the amateur and old-time breeder.

**SPECIALTY CLUB DIRECTORY.**—Will be a complete directory of all the specialty clubs in America, all arranged under the different breeds and will contain the names and addresses of the officers, number of members, initiation fee and annual dues; special prizes given and where in 1912.

**POULTRY SHOW DIRECTORY.**—Will be one of the most valuable features of the book to the fancier, as all poultry shows held during the season of 1911-1912 having 2,000 or more entries will be reported in full. First, second and third prizes won, with names of winner, judges making the awards, number of entries in class, date and where show was held; name and address of secretary, entry fees for different classes, date of next show, and all arranged and indexed for

ready and instant reference. All shows having 1,000 to 2,000 entries during 1911-1912 will be reported as follows: Winners of first prizes, name of judges making the awards, date of show and place where held, number of entries in each class, date of next show, entry fees for different classes, whether exhibition coops are provided by the show management or must be provided by the exhibitor, name and address of secretary. All shows having less than 1,000 entries will be reported as follows: Total number of entries, date and where held, entry fees, who furnishes the exhibition coops, name and address of secretary, date of next show.

**SPECIAL ARTICLES.**—Many special articles will be published, written by the best experts in this country and Europe, such as the newest ideas on poultry house construction, how to prepare birds for the show room, the double mating system, single mating system, how to line breed, how to operate incubators and brooders, fattening and preparation of fowls for the market, how to operate back yard poultry plants, how to operate large commercial poultry plants, how to advertise fancy and market poultry, how to produce eggs throughout the year, and many others too numerous to mention.

**POULTRY JUDGES' DIRECTORY.**—A complete directory of all licensed and unlicensed poultry judges of this country, with postal address—breeds they are specialists in judging, poultry papers they are associated with, leading shows they have judged, and other information regarding them will be given in full.

**HANDSOMELY ILLUSTRATED.**—The publishers of the Year Book will endeavor to make it the handsomest and most artistically illustrated poultry book ever published. Many full page four-color illustrations and full page one-color plates will be used. It will also be profusely illustrated with smaller cuts showing all kinds of poultry appliances and diagrams of different articles described in the text. No expense or pains will be spared to make this feature the best of any book ever published.

**THOROUGHLY INDEXED.**—One of the most valuable features of the Year Book will be the thorough manner in which it will be indexed under main and sub-titles, and sometimes cross indexed. This feature will make it a ready reference library of all the important events in poultrydom that transpired during the year 1912. This feature will also possess a historical value that cannot be estimated at the present time. Suppose that ten or twenty years from now you wished to find out what were the total number of birds on exhibition at the Madison Square, or any other show, held during 1912, and who were the winners and judges, or what a certain egg laying contest did, or what was the best treatment for any certain poultry disease, or what the experimental stations were doing in 1912, or wanted some statistical information on any subject relating to the poultry industry in 1912, you would just go to your library and get the American Poultry Journal Year Book for 1913, would turn to the index on any of these subjects and the information would be right in your hand. And remember it is the intention of the publishers to issue a similar Year Book each year. It is unnecessary to say that such a historical record of each succeeding year will be worth preserving for the generations yet to come.

**PRINTING AND BINDING.**—The book will be published in the convenient size of 5½x8 inches and will be printed on high grade book paper suitable for printing fine halftone illustrations in the best manner possible. The cover will be an artistic and original design, and the binding will be linen thread sewed to make it flat opening. There will be nothing cheap or trashy about the book, as it is the intention of the publishers to make it a representative of the best present day standard of artistic printing and worthy to be handed down to posterity as an example of what the best printer could produce in the year of 1912-1913.

The American Poultry Journal Year Book will contain between 400 and 500 pages and the prices will be \$1 for handsome cloth bound de luxe edition, and 50c for paper cover edition.

## Special Combination Offer

Paper Bound Edition of the "Year Book," and a full year's subscription to American Poultry Journal for only \$1.25, or CLOTH BOUND EDITION and one full year's subscription for only \$1.50. For Canadian subscriptions add 25 cents a year for postage; foreign subscriptions add 50 cents.

American Poultry Journal, 542 So. Dearborn St., Chicago, Ill.

# DON'T KILL THE LAYING HEN

**T**HE HEN that lays is the hen that pays. Hundreds of thousands of hens are killed each year that are in full laying condition, while an equal number are kept in the flock that never have or never will lay an egg, or at best will lay only a very limited number. All this may be avoided if everybody would use the Potter System of telling the layers from the non-layers.

## Cull Out the Drones and Save on Feed

Why should the poultry breeder go on wasting feed by feeding a lot of hens that do not produce enough eggs in an entire year to pay for their feed for one week, when it can be avoided by learning the Potter method of telling to an absolute certainty just which hens are the producers and which are the drones in the flock?

If you know the Potter System you can reduce the size of your flock and save money on your feed bill, and at the same time secure just as many eggs at from one-third to one-half the cost. **Is not this worth considering?**

The Potter System is the only reliable system on this subject, and anyone can learn it in an hour's time, and we guarantee that anyone with a little practice can go among a flock of fowls and pick out the layers as rapidly as the birds can be handled. We have thousands of unsolicited testimonials from people who have purchased our book "Don't Kill the Laying Hen" and learned how to pick the layers and who consider the book worth many times the cost. Read what a few of them have to say:

## TESTIMONIALS

3095 W. 100th, Cleveland, Ohio.

Gentlemen:—Having received one of your books regarding the laying hen, I am pleased to say that it has done a great deal for me and would not part with it for many times what it cost if another could not be had. Yours truly, JOHN VAN SCHOAR.

304 Grand Allee, Quebec, Canada.

Gentlemen:—I received your book "Don't Kill the Laying Hen" some time ago. I am very much pleased with it and think it the best book I have ever read and would not be without it for any amount you would ask for it, and think every person that keeps fowls should have a copy. Yours truly, ED. ARCHER.

Wellsville, N. Y.

Gentlemen:—I received your book on "Don't Kill the Laying Hen." Will say that it is all you claim it to be and that it is no fraud. I went out to the hen house last night and tried the test. It worked to perfection. I predicted that a few hens would lay the next day, and sure enough some of them have laid. Very truly yours, WM. H. LEO.

Jutland, N. J.

Gentlemen:—Yours at hand and am glad that you have notified me of your new book of the system of selecting laying hens. Your old book has saved me many a dollar on feed bill, besides giving me more room for the layers. I would not be without this book for any money and am glad you have added more to it. Yours truly, M. V. TAYLOR.

977 Wilcox Ave., Chicago, Ill.

Gentlemen:—I must say your book "Don't Kill the Laying Hen" is valuable to any poultry keeper; it is worth its weight in gold and your system reliable in every way. I am more than pleased with it. I have told some of my friends about the system and they got the book and are pleased with it. Yours truly, JOHN MOYER.

Box 105, R. R. No. 1, Charlestown, Ind.

Gentlemen:—I am ashamed that I have allowed almost two years to pass without writing you how thoroughly I endorse and value your book "Don't Kill the Laying Hen." The only thing I don't like is I can't tell my poultry friends all it has taught me. I would not be without it for many times its cost. We frequently ship fifty or sixty hens and get as many eggs as before, showing we had not shipped laying hens. It saves me a trip to the poultry house at night to know which are broody hens. At feeding time I examine all hens on the nest and shut up the broody hens. Yours very truly, MRS. B. R. McCONNELL.

Deer Creek, Okla.

Gentlemen:—Your letter and circulars to hand and contents noted. Yes, the best I can do is to have the new book "Don't Kill Biddle." It has made me one hundred and ninety dollars and still making more, and only a few chickens, from 70 down to 44 now. I'm running two machines and selling enough to support me and living like Queen Victoria. Yours truly, G. W. NORMAN.

Tucson, Ariz.

Gentlemen:—Your book in regard to the laying hen received. It is well worth the price. Anyone owning a small flock of chickens ought to have one. Yours truly, J. A. GORDON.

614 Boos St., Harrisburg, Pa.

Gentlemen:—I received your book on "Don't Kill the Laying Hen" and must say it is all it is claimed to be and more. Yours truly, GEORGE J. GRIFFEE.

Lincoln, Kansas.

Gentlemen:—Your book "Don't Kill the Laying Hen" is just the thing for a poultryman. I don't see how I got along without it. I would not part with the knowledge gained from it. Yours truly, MRS. IDA MEIER.

# THE FOURTEENTH EDITION OF THE GREAT POTTER BOOK

is just off the press. Revised and improved to such an extent that it is now without question the **greatest book** of its kind ever published. This book contains 96 pages, (6½x9 inches) and 38 illustrations; printed on super-calendered paper, bound in two kinds of binding-paper and cloth. Will make a very valuable addition to any poultryman's library. In fact, no one who raises poultry, no matter how many or how few, can afford to be without a copy of this great book. The secret this book contains is worth many dollars to anyone.

More than 100,000 copies of this book have been sold during the past few years, which in itself is conclusive evidence of the value of this book. When ordering a copy of this book you must promise not to reveal the secret to anyone except the immediate members of your family. The secrets it contains cannot be obtained from any other source. Everyone who receives this book is pledged not to reveal them to others. Therefore, it is to your interest to obtain a copy of this book at once and become a member of Potter's great "secret" family, stop killing the laying hen, thereby greatly increasing your poultry profits.

The Potter System of telling the laying hen has stood the test of time. It has been advertised in these columns for the past eight years, and during that time thousands of copies of the book have been sold and thousands of poultrymen all over the country have been enabled to turn loss into profit and thousands more can do the same thing if they will take advantage of the following offer:

## How to Get the Great Potter System

Realizing the great importance of this system to all poultry breeders the American Poultry Journal Publishing Co. has secured the exclusive right to print and sell this great work, and the benefits to be derived from system will be given to American Poultry Journal subscribers only.

## OUR GREAT OFFER

In order to supply every poultry breeder with the great Potter System and the greatest poultry journal on earth, we have put the price within reach of all, as follows:

Don't Kill the Laying Hen (Paper Cover) } BOTH FOR  
American Poultry Journal, one year . . } **\$1.30**

For the Cloth Bound Edition, \$1.50

## A History of Eight Non-Laying Bob-Tailed Hens and One That Was Not Bobbed

Including valuable scientific facts regarding molting. A supplement to "Don't Kill the Laying Hen." This supplement gives the story of One Hen that was not bobbed; the story of the first four non-laying bobtailed hens; the other four non-laying bobtails; how hens having red combs are deceiving; forced molting bad business; how the laying season may be extended and many more eggs obtained, or why hens having good laying organs stop laying early in the season, and much other valuable information which is worth far more to the average breeder than the small price we are asking.

If after a careful study and trial of the system you find that we have misrepresented this system in any particular, money will be cheerfully refunded. We have given this system a thorough investigation and know whereof we speak. If you are already a subscriber to A. P. J., we will extend your subscription one year from its present expiration. Send all orders to

## ORIGINATORS

OF ALL THE  
ORPINGTON FOWLS AND DUCKS

ESTABLISHED 1873 BOX A, SCOTCH PLAINS, NEW JERSEY

Eventually if after the best Orpingtons, all varieties, you will send to their originators. Why not now? and avoid loss and disappointment; we guarantee safe delivery and satisfaction, which is backed by a reputation of forty years' standing. This means

much to you. We are not here today and gone tomorrow as some breeders have been and are doing. Then experience counts. Surely we should understand Orpingtons better than a man who has had them just a year or two. We made the Orpingtons, all of them, including the Blue Orpington, our latest production, and are recognized headquarters for the best. A visit to our plant, where you are cordially welcome, will prove this, as well as our thirteen thousand first prizes, and our winning 103 firsts and 72 seconds at Madison Square in six showings, more than 8 times as many firsts as any other Orpington breeder. We can supply on the same day as order is received. The finest line of exhibition and breeding birds that we have ever had. Imported birds from our English plant, personally selected by our Mr. P. A. Cook for the American requirements, which English breeders do not know. Or American bred birds from our many American winners, sons of our first prize Madison Square White, Buff, Black and Jubilee Orpington cockerels.

**EGGS** from the **Finest Orpingtons** in the world, all varieties, and our first prize 1913 winners, \$20 a setting; three settings for \$50. From fine stock and second prize winners, \$10 a setting.

We will guarantee our best eggs at \$20 a setting to produce better birds than from any eggs purchased at \$75 a setting upwards from any other breeder; if not, we will refund in full the money paid us.

**Remember** that many of the first prize winners at the largest shows during the past season were hatched from our best eggs. **Blue Orpington eggs** at one price, \$20 a setting.

If you can advertise **Cook strain Orpingtons** it will add money to your bank account and prestige to your stock. It pays to own **Cook Orpingtons**. **Ask the people who own them.**

### Send 10 Cents for Illustrated Catalogue

Containing history of the origination of all the Orpingtons and hints on poultry keeping. **Mating List free.** Advice free. Inspection cordially invited. Trains met. Cook's Roup and Worm Powder, also laying and condition powder, for sale in \$1 and \$2 boxes. Ornamental land and water fowl for sale.

## Arithmetic Governs In All Things

Making Poultry Keeping Profitable, Comes Down to a Question of Figures or Quantity.

By H. H. Stoddard, Riviera, Texas

YOU CAN NEITHER LEARN nor describe a fact, or even an opinion on any question or doctrine whatever, without the aid of mathematics. Much or more. Little or less. Great or small. These considerations have to be part of your mental activities while you are learning or reasoning, or you cannot learn or reason at all.

Whether the subject is painting a house, witnessing a horse race, voting on the tariff, enjoying the smile of a healthy and happy baby, shooting a deer, embracing a religious doctrine, bestowing in charity, buying a big codfish, or wrestling with the two hundred

egg proposition, it is mathematics, mathematics, mathematics.

Take shooting the deer for instance. If you aim behind the fore-shoulder to reach the heart it is because you believe that aim more likely to kill. If you are painting a house you make your stroke in a particular way after dipping the brush, because you believe it will be more effective than some other way in spreading the paint evenly and quickly. But later you make your strokes differently in order to be more effective in obliterating the brush marks.

**Storrs and Mountain Grove.**

In the poultry business the late famous egg contests at Storrs and Mountain Grove were planned and carried out solely, entirely and totally on the consideration of more or less.

The great manufacturing concerns are run by careful figuring. Generally speaking they work on close margins, and expect to succeed through an exceedingly small profit on one article, or one pound, or whatever, by means of rapidly producing a great number of articles or pounds.

To such an extent is mathematics carried lately that actuaries work at nothing less but calculating the cost of each separate process through which the product passes; also a manufacturer hires an expert to come to his plant and look it all over, top, bottom and sidewise, to find out leaks, and how operations can be cheapened, even in a very small degree, in any of the stages of production.

All such features are bound to appear in the great egg farms of the future. They are almost absolutely unthought of now. Bless us all. Even the very largest and best of the poultry farms today are in just about the condition that manufactories were all over the U. S. seventy years ago. They lacked, then, both mechanical appliances and organized systems for saving labor, which factories have today.

The commercial poultry plant is a new institution. The labor cost of producing a dozen eggs, or a million, is to be cheapened by inventions, largely mechanical, that will make necessary only a half, a fifth, a twentieth, fiftieth, or one-hundredth part of the work in certain details compared with the present.

The ground is almost entirely unplowed and uncultivated as regards big market poultry concerns carried on under methods of modern business. Let us illustrate, mathematically, labor saving, in one detail, while tending chickens

cooped with mother hens. They must ordinarily be shut up every night, and let out every morning.

Now, there is an experimental poultry plant, larger, more complete and more practical than any other which ever existed on this rapidly revolving globe; to wit, that of the American Poultry Journal, and at the Texas end of this comprehensive Experiment Station I made the following trials in shutting up and letting out. A very trivial detail, you may say, but modern manufacturing business of any kind is made up of hundreds of details, each of which needs lots of study, and egg raising is essentially a branch of manufacturing.

First experiment: I placed thirty A-shaped brood coops in a row just far enough apart to lessen the liability of chicks getting into the wrong pew. The door to allow the youngsters to go in and out had to be at or near the ground, of course, or very young chicks could not use it. The bending down, unfastening, then fastening and getting back to an upright position, took one-fifteenth of a minute, or two minutes for the row of coops. Take notice that I am not just at present speaking of the time in going from one brood to another, but merely the time in opening and closing which is very little for one brood, still it is appreciable for thirty broods of sixteen chicks each, or four hundred and eighty birds in all, i. e., one "battery."

Second experiment: I contrived the entrance and exit doors to close by their own weight, and each to open by a wire, or cord, within reach of the hand about waist high, the motion being so quick that hardly a pause need be made at all in going from one coop to another. The saving in time was three-fourths, that is, the thirty doors were worked in one-half a minute instead of two minutes as before, and no laborious stooping was required.

**The Wire Pull.**

Third experiment: I was not satisfied with a device that would enable one attendant to do the work of four previously, and so tried the wire pull, as our folks call it, which had in sundry other cases saved for me hundreds of miles of travel in poultry chores, and an amount of time surprising to anybody who has not been accustomed to similar labor statistics. My wire-pull, called so for convenience, is a stout wire about the calibre of a shingle nail, and runs the length of the row of coops. At intervals, short pieces of smaller wire were attached to the pull-wire and to the doors of the coops, these opening upward and closing by their own weight. Now, one pull, needing one-fifteenth of a minute, opens thirty doors; whereas, in the second experiment, one pull opened only one door. This, however, is not the whole of the saving. The trip from one coop to another in experiments one and two took one minute, which is saved in experiment three.

**Fierce Competition Will Compel Labor Saving.**

In all, two and fourteen-fifteenths minutes were saved by the wire-pull idea, so that plan three saved forty-four parts of the time out of forty-five, as compared with plan one. The foregoing, from "real life," illustrates how mathematics rules in poultry keeping. Readers may remember how the convergent yard plan saves sixty-nine-seventieths of travel, and there are at the least calculation a hundred

other separate matters on a large commercial poultry plant where a saving of from one-tenth to ninety-five one-hundredths of time can be made. I estimate that the total time saving, all through an establishment will enable one man to do the previous work of five or more men. But it must be kept in mind that only a great increase in the number of egg farms and the resulting fierce competition will compel the intense labor saving I am speaking of, and force the adoption already common in various industries of the motto: "Use a machine instead of a man whenever possible."

Lucky the manager will be who does not wait, but adopts at once every labor-saving method his ingenuity can invent, and who pulls up his plant located in the wrong place and moves to the very best place in the U. S., for location itself is a tremendous labor saver, and a saver of capital, too.

Minutes, and fractions of minutes; seconds, and frac-

tions of seconds, must be saved on everything that is to be done over and over again. Operations that are performed only occasionally will not, generally speaking, justify mechanical labor-saving devices.

I cannot endure, for instance, often-used poultry yard gates that must be fastened and unfastened every time you go through. The ancient plan of cord or chain, or stout wire, fastened at one end to the gate and at the other to a stake in the ground with a reasonably heavy weight between, saves a lot of time. You can carry a basket or a pail in each hand and go through one way without setting down either burden, by going through backwards, and you need check your speed except slightly. In going through the other way a simple device enables you to start opening the gate with your elbow.

In feeding young chicks and mother hens the right way of contriving and operating saves at least three-fourths of the time spent in the old way. As regards watering the ideal plan is to have water piped within reach of every bird, young and old, on the place. This works to perfection here where water does not freeze, thus allowing a tremendous labor saving.

As I have heretofore pointed out the planning of so trivial a thing as an ideal coop for a hen and brood demands a surprising amount of gumption and study, because in securing one advantage you run into a disadvantage. You are up against mathematics again. How much does the disadvantage weigh against the advantage?

How often the device is used, how great the per cent of labor saving, how well it will keep in repair, how fast does it wear out; or in other words, what is the annual charge

for depreciation, and what was the original cost, should all be considered.

Carnegie was a pioneer in instituting thorough work of actuaries and accountants on a scale both minute and comprehensive. Once, before trusts were formed, he politely piloted rivals all around his steel plant and amused himself by taunting them pleasantly and in jocose vein with the statement that he was beating them all out, and would continue to do so because "I know you will not know how to use my methods, or will balk at the cost." Then he took them to a large room where there were thirty desks and an accountant at each, and in co-operation with all the foremen of the various departments, and the use of many various blanks they kept tab of the exact cost of doing things in every process, involving heat, light, power, etc., besides the main items of materials, interest, wear and tear, and labor. "Gentlemen, this bureau of statistics, I call it, in addition to the usual office force, costs me over two hundred thousand dollars a year to run it. And it pays."

A dozen years before I ever heard of Carnegie's close calculations in labor saving, or of a similar example in any field, I had organized a branch in the publishing business in the same way, down to extremely minute details, thereby enabling one hand to do the work three performed previously, and with more ease and with fewer mistakes. I mention this fact to show that saving a big per cent in each of many little operations on a large plant is an old plan of mine. By adding all the separate savings together a surprising result is reached.

In twelve or fifteen years after reading Carnegie's methods, his example was being followed, as a matter of course, in many great industries.

#### Proper Way of Figuring.

"Nebraska Farm Journal recently received a letter from

a man who uses both teams and tractors on his farm. In one outfit he runs eight three-horse teams, which will do about the same amount of work as his 30-horsepower tractor, and this affords a good opportunity for a comparison of the expense.

"The tractor cost \$2,800 and the plows \$400, making a total investment in the output of \$3,200. An annual depreciation of 10 per cent is charged. This amount is distributed over 100 working days, as the tractor does not work every day in the year, and that number is considered a fair amount of work for it in an ordinary season. A day's plowing with the tractor, according to this man's figures, cost \$16.59, or 83 cents an acre, an average of 20 acres per day being the record of the outfit. Itemized the expense is as follows: Gasoline, 45 gallons at 12 cents per gallon, \$5.40; 4 gallons of lubricating oil at 30 cents, \$1.20; engineer and his board, \$2.25; plowman and his board, \$1.75; grease, 12 cents;

interest on investment, \$1.92; depreciation, \$3.20; and repairs, 75 cents.

"With 24 mules drawing eight 14-inch plows the total cost of a day's plowing, including the labor of the men, was \$37.32, itemized thus: Interest on investment, \$3.04; depreciation and repairs, \$5.08; eight men, at \$1.25 per day, \$10; feed, \$19.20. A valuation of \$200 each, or \$4,800, is assigned to the mules, and the eight sulky plows are listed at \$280, making a total value of mules and plows of \$5,080. Twenty-four acres per day is an average for the eight teams and the cost of plowing is \$1.55.

"This, compared with the cost of 83 cents with the tractor, gives a difference of 72 cents per acre in favor of the engine. In the section from which this man reports it costs about \$80 per year to keep a horse or mule.

"If an engine can plow cheaper than the horse, it can do the work of seeding and harvesting at a lower cost."

I quote the above to not only show how every item should be figured in, but to show besides that in the Southwest the "seeding and harvesting," and cultivating, too, of the immense quantity of the poultrymen's green stuff and his grain hauling will inevitably be performed by auto. It is good-bye horse all along the line.

As regards balancing advantages against disadvantages, I read in a poultry paper I just now picked up, the following:

"There is no doubt a poultryman will get more eggs if he has scratch sheds. That is a fact that cannot be denied. But that he will get enough more eggs to justify the added expense and labor I very much doubt. It has been my experience that it is not so. I have found that the

hens will not lay enough more eggs to pay me to put, perhaps, half again as much expense into my houses, take the trouble to supply the litter and to keep the shed clean." The following, concerning feeding, is less sensible:

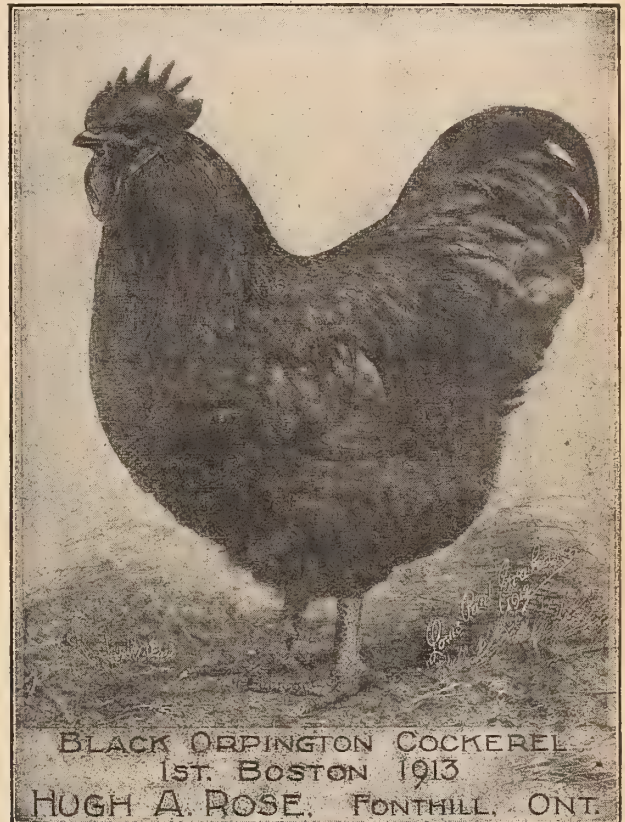

"I feed my hens according to what I think will yield the best returns for the capital invested. At the present time the mash ration consists of the following ingredients:

- "Shorts, two parts,
- "Ground wheat, one part,
- "Ground corn, one part,
- "Oil cake meal, one-fourth part,
- "Salt, a couple of handfuls,
- "Pepper, mustard or ginger, as much as can be taken in one hand.

"The reason that I feed the spices is the same as that for which I take a little salt and pepper on my own food. I like it, and I am of the opinion that the chicken does. I do not stimulate the flock, except in the fall; that is not

the idea at all. I am simply of the opinion that the fowls like that dash of spice, and I therefore give it to them. Of course in the fall I give a great deal more spice than that, and I also give a good deal of green feed, in the mash, with the idea that I will help along the molt, and also get a few more eggs. At the present time I also cook for the hens. This is not the rule in the summer, but in the wet weather I think it helps out a little. For the four thousand hens I cook, every day, a five-gallon can of Egyptian corn and one of beef scraps, together. This will make about four cans when it is cooked, and that is the amount that I feed. I mix this with mash, and the hens appear to relish it greatly."

On this gentleman's ranch the hens receive, every day, an allotment of fresh meat. For the four thousand the daily ration is one hundred pounds in the ordinary amount,

or one hundred and sixty pounds in the "forcing season." This is given to the birds raw. Mr. Blank stated that he preferred raw meat to the beef scraps solely because he was of the opinion that it gave better results for the money, which is, indeed, the thing which is considered in all points on this ranch.

"For a grain ration the poultry is given all the wheat and ground corn they will eat. Both grains are fed separately, in hoppers, so that the birds may have as much or as little of each as they desire to eat. They are also given Egyptian corn, as much as they like, and in the summer this takes the place of the yellow corn. The hoppers are built in houses the exact size of the roosting houses, so that at any time the feed houses may be turned into a hen house. In this way the feed is kept much dryer in the winter than if it were fed out of doors on the ground."

The keeper whose opinions and methods we have quoted above runs a very successful plant. His four thousand layers have an open range, which, of course, makes scratching exercise less necessary, especially as his breed is Leghorns, bound to do lots of running around.

On studying the above carefully the reader cannot help noticing that the allowance of "salt, a couple of handfuls, and pepper, mustard or ginger, as much as can be taken in one hand," gives little information, for the quantity of the mash which receives the seasoning is not stated.

There is another curious proposition. This party allows from two-fifths of a grain to a whole grain more than three-fifths of an ounce of fresh meat per layer per day, or an average of almost half an ounce. This means a bit of about the size of a lady's little finger. I was going to say the size of your thumb, but the thumbs of readers, if

you include the male sex, are some of them thumpingly large.

Now, please notice that the proprietor seems to have guessed that the above mentioned small quantity of fresh meat per day was all that he could afford. Suppose he had doubled it, might it not have paid well? Just here inevitable mathematics comes in, and the need of repeated and very careful experiments by the Stations, which have thus far done but little on the "living animal cell" question, compared with its tremendous importance involving the production of millions of dollars worth of eggs. During the past year, almost everywhere, much larger quantities of green stuff than formerly have been fed, and it has been demonstrated more clearly than ever that dried vegetable matter, like alfalfa meal or dried beet pulp, does not fill its place.

A consideration of great importance also is that young chickens are grain eaters only imperfectly. They, in a state of nature live, when young, like the young of almost every species of wild birds, almost entirely on insects and

green stuff. When adult our fowls are, of course, omnivorous. Grain will take a back seat in chick feeding when you keep it before the youngsters all the time in competition with fresh, tender and finely chopped rape and fresh animal food, lean and fat, too, all the time, everything separately. They will eat decidedly more rape in proportion to their size and weight than grown fowls will. The very first time you feed your wee chicks leave out cereals and cooked vegetables entirely, and give finely chopped fresh vegetables and fresh meat. See that they have all they will eat all their lives of the former, and of the latter, too, until they grow up and the cost becomes prohibitive. When that stage is reached substitute all they will eat of the best quality of scrap obtainable.

As I have urged, the Stations should exploit various sources of fresh meat supply for laying birds, as one Station has done already, and furnish us all with statistics showing how far we can go in this matter and make it pay. Mathematics, again, which govern everything.

## Experiments in Profitable Egg Production

A Record of Six Years Work With Poultry, Showing Greater Profit With Little or No Increase in Expenditure.

By James B. Morman, Kensington, Md.

THE POULTRY KEEPER, whether on a large or small scale, aims to get results that make his efforts worth while. There are a few persons who keep fowls for pleasure, but the great majority are seeking to make profits. In our extremely practical age, the utility side of poultry keeping is its dominant feature, and the subject of egg production stands preeminently in the front rank.

The profitable production of eggs is a matter of general economic interests at the present time. If the sale of eggs be the aim of the farmer, the commercial poultry keeper, or the small holder in the suburbs, then methods of in-

creasing the yield of eggs without additional cost of feed or labor become of practical value to each class of poultry keeper. Such information is timely in view of the high cost of poultry feeds, of labor, and of other factors which enter into the cost of producing eggs, and especially in view of the fact of no apparent increase in their selling price.

It is frequently said now-a-days that it is cheaper to buy eggs than to produce them. While this may be true in some instances, it is not true as a general statement. If it were so, it would mean the death blow to a very promising phase of the poultry industry. To prove that this is not the case and for the benefit of the readers of AMERICAN POULTRY JOURNAL, it is my purpose to describe as briefly as possible the simple principles of breeding and management I have practiced during the past few years and which have afforded profitable returns.

### Selection of Early Layers.

Some nine or ten years ago I moved from the city into

the country and bought a small place which had on it a barn and a small poultry house. Having a much stronger desire to keep fowls than a horse, I fitted up the lower part of the barn for fowls, putting in windows where necessary and making other changes incidental to a practical, intensive poultry plant. From information I could gather from various sources, I estimated the capacity of my buildings at about 50 fowls, and this is the number I have aimed to keep from year to year. I selected White Plymouth Rocks, not because I knew anything about them, but because an opportunity presented itself to buy them with the premises. They were ordinary layers, having been kept wholly for eggs for household use.

For a few years prior to 1907, no particular attention had been given by me to record keeping with a view of ascertaining how many eggs the fowls laid or whether they paid any profits. But about that time I became more deeply interested in the subject of egg production from the biological point of view as a result of reading an account of the breeding work carried on by the Maine Experiment Station. These experiments had for one of its objects the increase of egg yields in fowls. I decided, therefore, to see if I could increase the egg production of my own flock by paying more attention to principles of breeding, systematic care and feeding, and the keeping of records. As far as the latter feature is concerned, I now recognize the value of annual poultry records to the progressive poultry keeper, since they furnish an interesting comparative statement of the business from month to month or year by year and tend to demonstrate the value of different tests made with a view to increasing profits.

It is well known that, in the case of heavy breeds of fowls like the Plymouth Rocks or Wyandottes, the ordinary time for a pullet to begin to lay is between seven and eight months. But in this respect individual fowls are not alike.

Scene on the Farm of S. A. Nofztger, North Manchester, Ind., Originator of Partridge Plymouth Rocks

Some begin to lay before others, according to a recognized principle of biology. As a result of this tendency to variation in the laying period, some pullets begin to lay very much earlier than others. This tendency, I believe, is sometimes further promoted by good care and feeding given to the chicks. Such an occurrence took place in my own experience in 1906. A few pullets began to lay a little earlier than usual, and it occurred to me that these pullets would serve as a good foundation for future breeding stock for the production of eggs. The outcome surpassed my expectations. The results, so far as early laying is concerned, is briefly summarized as follows:

In 1907 I succeeded in reducing the time of early laying to a few days more than six months. By following a similar method in 1908, the period of the earliest laying pullet was reduced to 5 mos. 18 days. Again in 1909 the early-laying period was still further reduced to 5 mos. 4 days—an exceptionally early laying period for the Plymouth Rock breed of fowls and which has not again been equalled in my experience.

#### Introduction of New Blood.

In poultry breeding for egg production, especially where one's flock is as small as 50 fowls, it is highly important to maintain the vigor of the flock. This is done by the infusion of new blood usually on the male side. When new blood is introduced, two interesting questions arise, namely—What effect will it have on early laying? and will the early laying tendency plus the increased vigor resulting from the cross with a new strain have a tendency to increase or decrease the egg yield?

In all probability the maintenance of vigor is of greater importance in egg production than in early laying. In the latter case, it sometimes occurs that a pullet which lays exceptionally early either lays a few eggs and becomes broody or moults in the late fall or early winter. If a pullet does either of these things, the egg yield is thereby diminished at a time of the year when prices are high because of the scarcity of fresh eggs. On the other hand, for the production of prolific layers vigor is absolutely essential, and the keeper of small poultry flocks will make no mistake from the biological point of view by introducing new blood into his flock every two or three years. Some of the results as determined in my own tests have an educational value.

The first effect of the introduction of new blood was to set back the early laying to 6 mos. 15 days in 1910, and to set it back to practically the normal period in 1911, when the first pullet's egg was not laid until 7 mos. 13 days. Here, then, was a gradual elimination of the early laying tendency within two generations by the introduction of new blood, and the question of vital importance, so far as concerns profitable egg production, is as to its effect on prolific laying and on the total egg yield during the year. Let us now briefly consider these points.

#### Development of Prolific Layers.

While early laying is not, as a general rule, any indication of the egg-laying capacity of individual fowls nor of superior vigor, there is no biological reason why both can not be developed together in fowls by means of systematic selection, careful methods of breeding, and good care and feeding. It is my conviction now, after making various tests covering several years, that both breeding and management are necessary for the development of the best layers. Either factor undoubtedly results in improvement, but the two together will give the best results so far as increasing egg production is concerned. If, by the selection of early layers and by good care and feeding, a strain of prolific layers can be produced, not only will the profits of the industry be increased, but certain practical principles of successful poultry breeding for egg production will have been determined. From the economic point of view, the most important feature of modern poultry-keeping is the profitable production of eggs, and the most pronounced factor in egg production is unquestionably that of prolific laying. Results achieved along this line, therefore, have a more than passing interest and value.

With practically the same number of fowls at the beginning of each year and no change in methods of care and feeding, the best test of improvement, of course, is in the egg yields. That selection of early layers and the introduction of new blood brought about the desired result of increasing egg production may be seen from the following figures of egg yields covering five years. They were as follows:

Year	1907	1908	1909	1910	1911
Number of eggs laid...	3,966	5,135	5,511	5,499	5,573

The average egg production by flocks in the United States is about 75 or 80 eggs a year. The yield of eggs by my flock

in 1907 was somewhat above this number. If we divide the total of egg yield for that year of 3,966 eggs by the total number of fowls, namely 50, it gives an average of nearly 80 eggs per fowl a year. As a matter of fact, however, the number of fowls in the flock is gradually lowered from the beginning of the year to the time the new pullets come into laying. The fowls are sold, used for hatching, and consumed on the table. In all probability, as I have figured it from time to time, the average number may be reckoned at 40 fowls. This is undoubtedly giving the highest limit. On this basis, the gain in average egg production per fowl from year to year is shown by the following comparative records:

Year	1907	1908	1909	1910	1911
Average egg production per fowl	99	128	138	137	139

After the year 1907, there was a striking gain in egg yield. Taking that year as a fair basis for comparison and as representing the average egg production of the normal flock in the United States, the results of selection in breeding and good care stand out clearly in this record. The average annual egg production of the flock for the four years 1908-1911 is 5,429 eggs as compared with 3,966 in 1907.

This gives an average annual increase in egg production of nearly 37 per cent to be credited to breeding and management.

With the question of increased egg yield there is necessarily to be considered that of the profits. The records of expense vary very little from year to year, and during the three years 1909-1911 there was a most striking uniformity in both the egg yields and the income from the flock. For these three years the income above expenditures averaged a little over \$130 a year, or more than \$2.50 net profit annually per hen. This handsome profit was secured on the simplest economic basis or ordinary market prices for both eggs and stock. The record proves beyond question that it pays to select from early layers as a basis for prolific layers when the object is profitable egg production.

#### Breaking the Record in 1912.

The uniformity in egg yields during the years 1909 to 1911, inclusive, shows that this strain of White Plymouth Rock layers had become fairly well established. It seemed to me, after thinking carefully over the situation, that an increase in egg production could next be effected by chang-

ing the make-up of the flock as regards the number of hens and pullets.

As a general rule, pullets are considered better layers than hens. The question running in my mind was this: If a strain of prolific layers has been developed, would not a greater number of pullets and a fewer number of hens give a larger increase of eggs? This was the question I sought to answer in the year 1912, and the results are so gratifying as regards egg production and profits that they may prove extremely valuable to poultry keepers who have not the time to make experiments themselves, but who are eager to profit from the experience of others.

The general make-up of the flock since about 1905 had been a few hens in their third year, all the hens in their second year which survived from the pullets of the preceding year, and from 16 to 24 pullets hatched each year. In this way the average number of about 50 fowls in the flock was maintained.

Prior to 1912 there had been no material change in the make-up of the flock. In order to see the effect on egg production as a result of increasing the number of pullets and decreasing the number of hens, I will summarize the make-up of the flock for the years 1911 and 1912 and will give a

increase in egg production was 1,741 eggs from the same number of fowls in a year. This was the number of eggs actually brought into the house. But, in addition, the losses for the year by breakage amounted to 29, so that the total number of eggs laid during the year was 7,343. If we take this number of eggs and divide by 54, which was the number of fowls in the flock at the beginning of the year, we get an average egg production per fowl of 136 eggs. This is a higher average than that made by the Maine Experiment Station, which was about 125 eggs per fowl.

But during the year 1912 the record shows that 8 pullets were used for hatching purposes from February to April, one pullet and two hens died during the year, and 21 hens and pullets were sold for hatching or for table use. This must have occasioned a considerable loss in egg production. By November 1st the original flock of 54 had been reduced to 30 fowls. Assuming an average of 40 fowls for the year as we have previously done, the average production per fowl for the flock was 183 eggs. It is doubtful whether this record is often surpassed by flocks of high egg production in this country.

It is one of the most gratifying features of this record in egg yield that it was secured without any noticeable increase in expenditures. For the year 1911 the income was \$215.93 and expenditures \$100.68, while in 1912 the income was \$266.37 and expenditures \$108.92. The profits of the two years were, therefore, \$115.25 and \$157.45. The greatest increase in profits arose from the sale of eggs at retail, the difference being \$51.20. For this increase in profit making, the pullets are to be largely accredited. A comparative record of their laying from November, 1911, to October, 1912, shows that the 20 hens laid 1,837 eggs and the 34 pullets 5,111 eggs. When these data are brought to the same ratio, they show that the gain in egg production on the part of the pullets was 2,166 eggs. The value of pullets for egg production, therefore, seems to be fairly well established from this experiment.

#### Care and Management.

As I have already said, the care and management which poultry receive have something to do with the number of eggs laid. While this topic in itself is worthy of separate treatment because of its importance in the profitable production of eggs, I think in conclusion a few words on this theme will serve to round out the purpose of this paper. The importance of this subject was recently emphasized to me from experience. A neighbor bought eggs of me in January, 1912, and hatched in an incubator; I did not hatch chicks at all until toward the last of March. My neighbor did not get eggs from his pullets until December, whereas I began to get eggs from my pullets in October. Here, then, from exactly the same stock and in the same district a difference of from 3½ to 4 months' time existed in the first laying of eggs by the pullets. On inquiry I learned that the chickens raised by my neighbor had not received either the care in housing or the feeding and management which my chicks and young pullets had received. It is convincing to me, therefore, that the effects of breeding may easily be counteracted by poor care and management.

There are certain kinds of feeds which fowls require at all seasons of the year in order to provide for physiological waste and egg production. Chemical analysis has shown that a few standard feeds in combination provide fowls with all necessary ingredients. So far as grain feeds are concerned I practically limit my supply to corn, wheat, and oats. In the morning the fowls receive a wet mash of 3 parts bran and 1 part each of middlings, corn meal, and mixed grains by measure; at noon a mixture of the 3 grains but with wheat largely predominating; and at night the same grain mixture but with corn in proportion of 2 to 1 in summer and 3 to 1 in winter.

Meat meal, oyster shell and grit, and plenty of fresh water are kept before the fowls constantly. Every pen is provided with a dry dust bath, a light and dry scratching pen with litter, and is protected from draughts and dampness.

Green feed is provided by means of limited grass runs, by weeds from the garden, and household wastes. In winter a little alfalfa meal is occasionally added to the mash, and apple parings, cabbage leaves, or turnip tops are given in small quantities. In this way the fowls receive practically all they need for the proper performance of their physiological functions.

While these rules are simple, I regard them as important in feeding and management for egg production. They are too often neglected by many poultry keepers, but I am more and more becoming convinced that they play a very important part and can not be too often or too strongly emphasized.

comparative record of egg yield month by month for the two years.

During 1911 the flock consisted of 32 hens and 22 pullets; but in 1912 there were 20 hens and 34 pullets—a total on January 1st of each year of 54 fowls. The detailed egg production by the two flocks was as follows:

	1911.	1912.
January .....	384	486
February .....	567	717
March .....	907	926
April .....	751	893
May .....	619	892
June .....	521	759
July .....	502	653
August .....	411	571
September .....	376	388
October .....	178	306
November .....	132	273
December .....	225	450

Total ..... 5,573 7,314

This was a very gratifying result in egg production. As a result of having more pullets than hens in the flock, the

# Cancer in Fowls and its Prevention

Old Fowls More Commonly Affected Than Young—Co-operation of Breeders Decided in the Study of the Disease.

By Harvey R. Garlord, M. D.

**C**ANCER IN CHICKENS is not nearly so unusual an occurrence as breeders might suppose. During the past fifteen years there has been great activity in the investigation of cancer. All of the principal countries today have special institutes dedicated to this work. The first institution of this kind to be established in the United States was what is now called the State Institute for the Study of Malignant Disease, at Buffalo, N. Y. Among the most important developments in cancer research has been the discovery of the prevalence of cancer among domesticated animals, fowls and even fish. The State

Institute for the Study of Malignant Disease, which was originally started as a cancer laboratory, is now provided with a farm in the neighborhood of Buffalo, where cancer in animals and fowls can be studied under favorable conditions, and where breeding experiments on a large scale can be worked out. Wild animals seldom have cancer, but when they are brought into captivity they have been known to develop it, as for instance, in the London Zoological Garden, where, in a pen of kangaroos two or three of

erate with any of the breeders in the United States who find among their flocks fowls with growths upon them which may prove to be cancer. If possible, the Institute particularly desires to obtain living birds, but as, where one case of cancer in fowls, especially in fancy fowls appears, it is likely that other birds will develop the disease, any breeder who finds suspicious tumor-like growths, especially those corresponding to the illustrations given, even if the fowls are dead, may preserve the tumor or portions of it, in

No. 1—Broken down cancer at base of beak. Hen. (See "Cancer in Fowls and Its Prevention.")

the animals developed cancer about the same time. This shows how important is the question of domestication, in the appearance of cancer in animals.

## Inbreeding a Factor.

That breeding, especially inbreeding, is an important matter, is illustrated by the fact that there is a special cancer in dogs which has played havoc in England and is also quite prevalent in this country among bulldogs; these animals have been, as every one knows, constantly inbred. This is also the case with chickens, where a certain type of cancer has been found in a fancy strain of Plymouth Rocks. This tumor can be inoculated for experimental purposes into fowls of this strain, but for a long time could not be transmitted to common fowls. However, in the course of experimentation the cancer became so active that today it is easily grafted into various breeds of chickens.

Cancer in chickens is undoubtedly more or less prevalent all over the world. In Germany, where the matter has also attracted considerable interest, the Cancer Institute at Heidelberg has succeeded in collecting a very considerable number of examples of cancer, and the illustrations in this article were obtained from this Institute. The State Institute for the Study of Malignant Disease is anxious to coop-

No. 2—Malignant skin cancer in a pigeon. (See "Cancer in Fowls and Its Prevention.")

10% formalin solution or 40% alcohol, and send it to the Institute and a report will be given the breeder as to the nature of the growth. The State Institute will be glad to pay all costs in connection with the shipping of live birds to the Institute in Buffalo, as well as the commercial value of the bird. Any breeder who has a suspicious looking bird would best write to the Institute and describe its condition,

and if the indications are that it is cancer, the necessary shipping instructions will be sent.

The principal losses in poultry raising are caused to a great extent by epidemics of infectious diseases or by faulty feeding or improper housing of the fowls. The hygiene of poultry raising, however, has become so well established that careful breeders are able to control epidemics and the feeding of poultry is now on such a correct basis that these losses are greatly diminished. Poultry pestilences can be

No. 3.—Calcified misplaced and diseased egg, producing a lump simulating but not a real tumor. (See "Cancer in Fowls and Its Prevention.")

prevented successfully by the isolation of the first fowls that become affected, and strict disinfection.

#### How Cancer May Be Recognized.

Cancer in fowls is at most only an occasional occurrence. The disease always progresses slowly. It first makes its appearance as a slowly growing lump and this lump always consists of solid flesh and should be distinguished from abscesses, which are filled with matter (pus). It affects more often old fowls than young and is not accompanied by any other signs of sickness than the lump mentioned. The breeder may first notice a bird which appears to be unduly fat or logy; on account of its bad appearance the bird may have been separated from the flock. In commercial poultry raising such birds have frequently been sold to the market without the breeder having realized that the bird was diseased. It should be easy for the experienced breeder, especially of fancy fowls, who watches his birds closely, to recognize tumor-like thickenings when these appear on the body surfaces, the bill or the anus. When these

growths appear about the bill they usually interfere with feeding, in this way leading to loss of weight and of course finally directly or indirectly to death. The tumors appearing on the skin of the feathered body are not so easily recognized, although, if as advanced as in Fig. 2, this would not be the case. When the tumor growth appears internally as in the crop or intestinal canal, or the laying tube, or ovary or other inner organs, the breeder would first become suspicious when the disease was advanced. In such cases the hen would cease laying and lose flesh and activity. These symptoms should attract the attention of the breeder. Sometimes an internal tumor will be first suspected by the increase in the girth of the bird and cases have been seen where the development of the abdomen has been so great that it dragged on the ground. Occasionally, of course, masses of fatty tissue are found on the abdomen. This is not cancer. Where birds are killed the evidence of an internal tumor will be found by the emptying of a large amount of clear amber or yellow fluid from the body cavity. Tumors not infrequently occur on the lower limbs. These should be distinguished from growths which are caused by mites, which are known as "scaly legs" or "lime legs."

The study of cancer in chickens has already thrown a great

No. 4.—Malignant cancer (sarcoma) growing from the muscles of the upper part of the leg in a hen. (See "Cancer in Fowls and Its Prevention.")

deal of light upon the entire subject of cancer and further investigation of cancer in fowls, which are particularly well suited for certain kinds of experiments, is sure to prove of benefit to the study of this disease in human beings. For this reason breeders of chickens may assist the work which is being done by careful search for chickens with tumors, and by communicating at once with the State Institute for the Study of Malignant Disease, Buffalo, N. Y.

# Boston's Great Beauty Poultry Show

The Seventeenth Annual Exhibition Held January 7 to 11th, 1913, Was Greater and Handsomer Than Ever Before.

By H. P. Schwab

R. W. B. ATHERTON is the man at the wheel, and under his care Boston has for years put on shows that have been of the greatest value to the poultry interests of the world. Mr. Atherton has always been a true champion of standard bred poultry, his life's work is devoted to better poultry, still his greatest work and his greatest success is the Great Boston Show, which he first made possible and then placed it in the front rank of true fancier's interests. We are proud of him and will always consider the Boston Show success as the personal success of Mr. Atherton.

It is a true fancier's show when hundreds of breeders meet on an equal, pass pleasantries and view the ponderous and beautiful display always found in the Giant Mechanics Building, which cover between five and six acres. To those interested in poultry this means almost an unlimited display of the world's best birds brought here to compete for royal honors and for the view and enjoyment of the attending thousands. No show or exhibit is more complete, every variety is seen to advantage here, for this section is very near to the original home of several of America's popular and favored varieties, as well as the home of the original impostors of others. Great and strong classes are the rule, all displayed in single coops and but one tier high.

The walks are wide, the light extra good. The display coops run through the center and around the sides, all decorated with evergreens. To large duck-ponds are seen here with rare collections of water fowls, while displays of pheasants and ornamental birds are all around in the grove-like transformation. The visitor can well imagine himself with nature in the wild-wood, amid the song of birds and seeing before him God's most beautiful creations in the feathered family. I hope that all visitors seen and enjoyed these sights as I did.

The size and completeness of this exhibit was a revelation, as there were fully 7,000 birds and entries in displays. There were 2,359 single entries, 190 pens of 950 birds; turkeys, duck and geese, 140; bantam, 165; 30 displays of 300 birds; dressed poultry and eggs, 150 entries; pet-stock, 132; pigeons, 2,126; college displays, 50 entries, 300 subjects; displays of pigeons, water fowl and collections of rare birds, about 500; besides these there were displays of poultry houses and feeds of several makes, shipping coops and supplies, brooders, incubators, etc.; also a very large display of cats was shown for a few days. The particular fancy, be what it may, was supplied here. The Poultry Journals were all represented, The A. P. J., the leading journal worth five dollars but only cost one, was the center of attraction. Our editor, Dr. Prince T. Woods, was in daily attendance, meeting friends and answering questions. The Doctor is six feet four of chicken Encyclopedia.

The display of dressed poultry was a drawing feature. This is rather new at our Eastern shows—a capitol idea we hope to see followed up. The egg display was another feature strong in value, for it bears well on the practical side. The eggs shown by Mr. Jacobus from his Campines was as valuable a lot as we have seen, in size, pure color, and in even form, it was a beauty. Mr. Jacobus is an earnest worker, with proper and staple ideas, and if he has his way the Campines will remain true layers and a substantial practical fowl. We believe this was his third great record of winning on display of eggs at this show.

The College display of poultry, eggs, charts, etc., was very interesting, and well showing what our coming generation is now learning in the poultry line. Some seem to think that too much practical, and not enough fancy ideas are taught the students. I don't think so; my idea is that we want men and women that will know how to make dollars from poultry keeping; teach them that and they will soon find out that the standard bird and highest quality specimen is their best hope.

Veterans' Day was again observed with the usual banquet. With Secretary Atherton in the lead they marched through the building, viewing the pretty birds and received with gladness by the exhibitors. They grow old in years and annually some are missed, but in spirit and love of fancy they are still young. We of today owe much to

these veterans, they handed down to us many possibilities, and we can best repay them by honest efforts and placing the industry on the highest possible plane.

Here several phenomenal records were made by some of the exhibitors. Mr. John S. Martin, in White Wyandottes, won four of a possible five first prizes, a feat unapproached at this show and in its greatest class. Mr. Arthur G. Duston, the well known White Wyandotte specialist, did the judging and well deserves special comment. His work was beautiful and just to all; one of the leading competitors told me it was the best work he had ever seen—and mind you this man lost. This is the "Right Spirit" that should prevail. We honor this man for his stand and we respect Mr. Duston for his magnificent work. The pen of White Rocks shown by W. R. Graves was the sensation of the

No. 5—Hornified cancer of the lower part of the leg in a hen. (See "Cancer in Fowls and Its Prevention.")

show, the cockerel a wonder and the females just alike and as near perfection as can well be expected. In condition they were simply perfection. The producing and showing of such a pen is the work of masters. Haldie Nicholson's winning Barred Rock Cock and other notable birds' win have due consideration later on in this.

Boston's annual banquet was Tuesday's feature, with Mr. W. B. Atherton as toast-master. Billie is right there with the goods and a "Prince." Nothing escapes him, for if he misses you one year he will come back for a double dose at the next. This year he muzzled Hamburg Bill and sat him on his left to be sure he would not break loose. Capt. C. H. Welles was also at the squeeze table and delivered one of his famous talks that had the "Fluffy-Ruffle" Barring beat a mile. Other notable speakers were Colonel Drevensdt, L. D. Howell, John S. Martin, Prof. Graham, D. Richard Oke, Wid Card, Frank Platt and many others. All

subjects from chicken to cake were well treated and toast-master Atherton spread the butter himself. It was a glorious affair and one ever to be remembered.

The order of the "Flea" held their banquet at the Copley Square Hotel on Wednesday eve., with about 35 members present. Grand Fleeze Louis P. Graham presiding. This was another affair of record that we can years hence look back to with credit. The speakers were Lester Tompkins, Mr. Benton, Mr. Allen, Baron Von Gink, Mr. McKay and others. We will very shortly tell all about this organization, which has a most worthy object in view and we will have 10,000 members by next Boston Show.

The weather was not the most desirable to have, still the attendance nearly doubled that of any former year. Tuesday, although it rained, there were 600 more paid admissions than on that same day last year. Sales were reported in all varieties, and many of them at record prices. From every view-point it was a great show, and a successful one; the fancy is the gainer and better for it. We owe much to the Boston Association, we all owe them our best efforts for the future, to do our share, big or small, to insure more exhibits like it with credit enough for all.

#### The Exhibitors and Their Birds.

Barred Rocks were the largest class seen here in several

years, in males, both cocks and cockerels, there was the best of competition and grand strong classes, but in females it was lacking in quality and in condition. With 195 birds in the class Judge Charles H. Welles had his work right before him, and with the dark and raining days his handicap was great indeed.

Mr. Haldie Nicholson, who has been a regular winner here for years with his male line, and this year also, won First Prize cock at the M. S. Garden, New York show, repeated, and has added more fame to his line and to his home town, Leominster, Mass. Here he again won 1st and 3rd Cock with a brother of his New York winner, also shape special and Champion Male special. In cockerels he won 3rd and 6th, they being young birds and not fully finished, but give every promise for the future. He also won First Prize Cockerel mating pen. Mr. Nicholson also breeds the Blue Orpingtons, Wyandottes and Leghorns and was a prominent winner with all here. At New York he won four of the five first prizes in Blue Orpingtons.

The Pittsfield Poultry Farm Co., Pittsfield, Maine, made a strong showing in all the Barred Rock classes, winning

6th cock, 6th hen, 2nd and 5th cockerels, 3rd pullet, and 2nd pen with several specials. Their birds were hardly at their best here, the old not finished and the young rather immature. Their 2nd cockerel at his best promises well, he has wonderful color and a fine head. Their 2nd pen was very close up with a very good male. This line has done well and we feel assured that Mr. Briggs will bring them right to the front.

Mr. C. H. Shaylor, Lee, Mass., won 2nd cock, 3rd and 4th hens, and 1st and 4th pens with display and specials. This is one of our oldest lines and in the hands of a man that has made a success.

Mr. W. W. Carpenter, East Providence, R. I., won first cockerel on a bright and rich colored bird of good form and a nice head.

#### White Plymouth Rocks.

The White Plymouth Rocks, with 227 birds in line, was one of the banner classes of the show. Birds strong in shape and in the best of condition were the rule, and it was a delightful class all through. In this great class also was found the feature of the show in the First Prize Pen owned by the Rockandotte Farm, Southboro, Mass., with Mr. W. R. Graves the proprietor. This pen was the delight of all who saw it and for wonderful quality and the best possible condition was as fine a collection as we have hoped to see. Mr. Graves also won on his other entries as follows: First and third Cocks, and first, second and third Pullets. Mr. Graves has for the past several years made records with his White Rocks and White Wyandottes that are of the greatest possible credit to him, and he has also supplied many winners at our best shows. He has made his mark as a breeder and is just the kind of a man that we are always pleased to recommend.

Mr. C. W. Pratt won First cockerel on a very pretty bird well finished and finely shown.

Mr. D. W. Green also had a choice lot of birds full of quality and in the best of condition. It was a corking class all through.

Buff Plymouth Rocks as a class were rather disappointing in numbers with but 53 birds displayed; last year this was the banner class of the show, with over 300 birds in line. There were many fine birds there this time and some new exhibitors.

#### Partridge Plymouth Rocks.

Partridge Plymouth Rocks were a fine class of nearly 100 birds, well shown with several exceptional birds in line. Mr. Paul Klingbell, Walpole, Mass., made a regular killing, winning well in all classes and including display special with Cocks 1st and 5th; Hens, 1st, 3rd, 4th and 5th. Cockerel 4th and Pullet 3rd. His winning cock a bird of great character and the best of form and markings.

First cockerel and First pen was won by Mr. J. V. R. Bright, of Waltham, Mass. In that cockerel he had a beauty with every quality and beside his fine shape and beauty head his color and markings are of the richest and most desirable.

Columbian Plymouth Rocks, while not of the largest in numbers, were of unusual strength and quality. Grand birds were there and it took the very best to win. Here again Mr. Frank G. Bean, Collegeville, Pa., made his usual record and won all but one of the first prizes and several others with all specials. This line has been a winner from the first and is one of great worth.

First Pullet went to Mr. Geo. H. Dexter, Everett, Mass., on a very fine bird in both color and markings.

#### White Wyandottes.

With 213 White Wyandottes from many of the leading yards of five States and Canada in line, making it one of the richest classes in true quality we have ever seen. It was a full hand class from first to last and one of the kind that can only be seen here or at the M. S. Garden show. In this great class of sublime beauty it remained for that very sterling breeder, Mr. John S. Martin, Port Dover, Ont., to make the high record of this show by winning four of a possible five firsts and all specials. His total winnings are Cock 1st and 6th, Hens 1st, 4th and 5th, Cockerels 1st, 3rd and 4th, Pullets 1st, 3rd and 4th, Pens 2d, 3rd and 4th. Mr. Martin had the goods right with him and no mistake and we were particularly pleased to see his strongest competitors congratulate him and heartily approve of his every award as well won. Mr. Martin has made records before and for all the years he has been breeding White Wyandottes he has been a consistent winner, but never before has such a record been made, and we really did not think it possible for any breeder to approach it. Mr. Martin deserves all credit and we hope he will accept our congratulations. We have called him Friend for many years; have seen his rise

to fame, and with well wishes can well say he royally deserves all he has won.

Mr. J. W. Andrews, Dighton, Mass., ran a close second; he has been a leading winner here for years and his line is most favorably known to all Wyandotte breeders. Neither he nor I have any excuses to offer. He is a dandy good fellow and the best and gamest exhibitor we have ever seen in the show room. His line is worthy and his birds better than ever before. His winnings were Cocks 2nd, 4th and 5th, Hens 2nd and 3rd, Cockerel 2nd, Pens 1st and 5th. A very classy win in this great beauty class of birds.

#### Silver Laced Wyandottes.

A rich class of 55 birds with type the feature, good open lacing and clean edges. First cock was won by Geo. W. Weed, with a fine bird in head and shape.

#### Golden Laced Wyandottes.

This being the club show brought out some of the best, if not as many as was hoped for, the quality was of the best and in this respect was as good as we have ever seen or handled. Mr. Loren H. Brown, Lunenburg, Mass., won well in all classes as follows: Cocks 1st, 2nd and 4th, Hens 1st, 4th 5th and 6th, Cockerels 1st, 4th, 5th and 6th, Pullets 1st and 5th, Pen 2nd.

Mr. Stanley Holden, Wayne, Me., won Hen 2nd and Pen 1st. Other winners were: O. P. Chase, D. H. Armstrong, and A. A. Gordon.

Buff Wyandottes were a fair sized class of good birds.

S. P. Wyandottes were one of the best classes we have seen to date, the leading winners were Horace Havemeyer, A. L. Hathaway, Rogers & Packard, The Castle Farm, Charles River, Mass., etc.

Columbian Wyandottes numbered 120 birds shown by many well known breeders, including Jas. E. Perkins, Chas. McGee, D. V. G. Curtis, Ralph Woodward, E. F. Benson, Geo. F. Eastman, S. Bartlett, M. A. Brayton, etc. The best of competition was had here and the birds as a rule were very well shown, with the honors well divided among the above.

#### Single Comb Rhode Island Reds.

Both Boston and the breeders that made this class of 170 birds possible have every reason to feel proud of their work. It was a hummer all the way through, filled with the best in rich color and in form with the general quality of the best. In this beauty class Mr. Lester Tompkins, Concord, Mass., made a fine record as they go now-a-days, by winning Cocks 1st and 3rd, Hens 3rd and 6th, Cockerel 5th, Pullets 1st, 3rd, 4th and 6th, and 4th Pen. In Rose Combs Mr. Tompkins won Cock 5th, Hen 3rd, Pullet 2d and Pen 3rd. We have no report on the specials, but this is as fine a win as has been made in some time, and extra good when we consider the competition. Mr. Tompkins has had a most successful season and his birds seen here, at New York and several other shows have been a delight, they show the best of color and they are a line that is very strong in type.

Old Acres Farms, Foxboro, Mass., have made a unique record, one that is unequalled in the annals of this variety. Here they entered just one cockerel, and with it won First Prize, and with but one pen entered won Second, in a class of 13 pens. The winning cockerel was a revelation in beautiful rich color of just the right shade, a bird with a grand head and the best of type. He is a remarkable fellow, being extra good all over and carries himself like the leader he is. Their pen was handsomely mated, one of the very best.

This Farm has within the past few years come strong to the front and at the late M. S. Garden, New York, show, led the way by winning First cockerel and First and Second breeding Pens. We also know of several shows where this line has been placed winners, and at one great show in particular know of a bird they sold that cleaned up all and won the sweepstake special. This quality of stock, and this kind of breeders are the best hope of the industry.

White Birch Poultry Farm, Bridgewater, Mass., another well known line that has been bred with much success, won Cock 6th, Cockerel 2nd and 6th. In Rose Combs, Hen 2nd. The second cockerel was well shown and a very strong bird in both color and form.

#### Rose Comb Rhode Island Reds.

Mr. Geo. W. Little, Braintree, Mass., was a greatly pleased exhibitor in this class, for on just two males shown he was awarded First Prize cockerel and 4th cock. We stood long to admire this cockerel, with his beautiful well finished form and magnificent head; he was shown just right and is in every way a wonderful bird full of character and with remarkable under-color. Such stock is bound to tell.

Other winners in this class were: S. E. Thayer, A. S.

Morehouse, A. E. Alden, W. H. Graves, Dr. N. Wallis, Valley Farm, etc.

In both Rose and S. Combs Mr. Everett M. Hawkins, Lancaster, Mass., won well with a very good line of birds.

#### S. C. Buff Orpingtons.

The S. C. Buff Orpingtons numbered 172 red hot birds, making a class of superior merit and the very best of competition. The Joe-Pye Orpington Farm, So. Norwalk, Conn., here again made a good win with most of their famous New York winners missing. Here they won Cocks 1st and 2nd, Hen 3rd, and Pen 3rd. This line has been right to the front for three years past and their quality is well known.

Major Hugh A. Rose, Fonthill, Ont., the man who saved the Hamilton at Hagerstown, came here fresh from his victories at Baltimore and New York and for his winnings received a large sized check with special good will from all. Winning at this show in Orpingtons means something, and the Major carried off the following: In Buffs Hen 1st, Cockerel 5th, and Pen 6th; in S. C. Blacks, which really are his specialty, Cocks 1st and 2nd, Hens 1st and 2nd, Cockerels 1st, 5th and 6th, Pullets 1st, 2nd and 3rd, Pen 1st; in the White Orpingtons, Hen 3rd, Cockerel 2nd and 3rd, Pen 6th. This is an exceptionally fine win for any breeder to make and follows up well and strong; in fact improves all his former records. This line has wonderful size and that with

**BLACK ORPINGTON**  
BRED AND OWNED BY  
J. P. ADAIR, MILLERSBURG, KY.

grand shape and the best of sound color are its features.

One of the grandest breeders in the business is Mr. Henry B. Prescott, Andover, Mass. He did not win as usual this year and most likely his change of home and moving his plant helped in this. Birds to win at Boston must not only be the very best in quality, but they must also be shown in condition, and at their best. Mr. Prescott's birds are as good as ever before and in his new quarters with improved climate and conditions he will again be heard from in the future. There is no man we would sooner trust or tie to than this man Prescott.

The list of winners in the Orpingtons beside the above included many well known breeders, with C. H. MacNear, M. Marwell, H. E. Challis, A. L. Hughes, Mrs. E. S. Everett, Mrs. M. T. Taylor, Lexmoult O. Yards, H. L. Davis, Englewood Co., Wheatland O. Yards, L. J. Tedlow, Joe McBride, W. T. Murphy, etc.

#### Blue Orpingtons.

This was a beauty class with many fine birds seen, this variety is surely doing well and is bound to become popular with their great beauty along with their practical qualities. Mr. W. H. Depper, So. Lincoln, Mass., was a great winner here by taking down Cocks 1st, 2nd and 3rd; Hens 1st and 2nd; cockerels 1st and 2nd; Pullets 1st, 2nd and 4th, and Pen 1st. We hope later in the year to visit these yards and those of Mr. Haldie Nicholson, who was one of the first im-

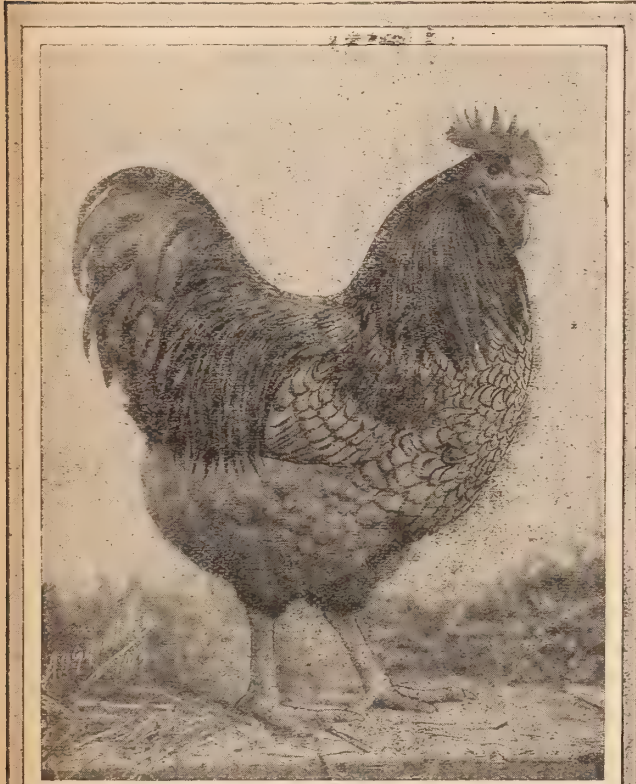

porters, and made a sweeping win at New York, and then to tell our readers of these two leading lines.

#### S. C. White Leghorns.

This, as usual, was one of the real hot quality classes of this great show, and here again a noted line and farm made a phenomenal clean up, winning about all that one could care for. The Dune Alpin Poultry Farm, East Hampton, N. Y., with Manager Geo. Kerr in charge, won here Cocks 1st and 2nd, Hens 1st, 3rd and 6th, Cockerels 1st, 2nd 3rd and 4th, Pullets 1st, 3rd and 6th, and Pen 3rd, with all specials. This line has won here before, also at the Palace New York show and at many others the country over; it is a leader. The four winning cockerels taking all the honors in a row were well worth seeing; in type and in general make-up they were all alike and in simply wonderful condition with the best of heads. Their two winning cocks were in a class all by themselves, of extra size, with low full tails and wonderfully fine and long saddle feathers. It was a great exhibit in a great class and reflects the highest praise on the owner and manager.

In S. C. Buff Leghorns Mr. A. B. Cox, Rochester, N. Y.,

FIRST PRIZE BLUE ORPINGTON COCKEREL AT  
MADISON SQUARE GARDEN N. Y. 1912-13.  
BRED AND OWNED BY  
HALDIE NICHOLSON LE MINSTER MASS.

carried off the honors by winning Cocks 1st and 2nd, Hens 2nd and 3rd, Cockerels 1st, 3rd and 4th, Pullet 2nd, and Pen 1st.

#### Other Varieties.

In Anconas the Urban Farms, Pine Ridge, Buffalo, N. Y., were among the prominent winners; this well known line has been liberally shown and has won great honors for some years. Here they won Cock 2nd, Hen 2nd, Pullet 1st, and Pen 1st, with specials. In Black Langshans, Cock 1st, Hen 5th, Cockerel 5th, Pullet 1st and 3rd, and Pen 1st. Mr. Urban arrived a day late for the banquet and he was sadly missed, for he always has just a little of the spice to hand out that flavors all things and makes us fully believe that life is worth living after all. Mr. Urban had his part in the veterans' parade and in years was the youngest there, but he is eligible in any class, single or double. He is a great lover of the White Plymouth Rocks and has been a leading winner for three or more years at the Buffalo International show.

Campines as has been the rule this season were a large class and a strong one with several well known breeders in

line. In Silvers the Manhattan Farm, Brighton, N. Y., with Mr. Geo. E. Noeth, Prop., won as follows: Cock 1st and 3rd, Hens 1st and 4th, Cockerels 1st, 4th and 5th, Pullets 1st, 2nd and 3rd, and Pen 1st. In Golden Campines they won Cock 1st, Hen 2nd and 3rd, Cockerels 1st, 3rd and 4th, Pullets 1st, 2nd and 3rd. They have been winning all along the line from Allentown to this show and have made a record that will be very hard for any line to duplicate at any time or season.

Mr. M. R. Jacobus, Ridgefield, N. J., the Campine "Champion," was also exhibiting here and won well in all the classes. Mr. Jacobus was particularly interested in the display of eggs and his winnings there this year as in seasons past, were pronounced and of the greatest possible credit to him and to his line of birds. He believes in Campines for eggs, for large white shelled eggs, and he has demonstrated here three years running that his birds lay the eggs that win in size, form, color and quantity. Besides winning in the regular classes he has won the special for best ten dozen white eggs three years in succession, a feat of which he feels doubly proud and one that reflects the best possible credit on his line of birds. In Campines he won: Silvers, Cocks 2nd, 4th and 5th, Hens 2nd, 3rd, 5th and 6th, Cockerels, 6th, Pullets 4th, 5th and 6th, Pen 2nd; Goldens, Cock 2nd, Hens 1st, 4th, 5th and 6th, Pullets 2nd, 5th and 6th, and Pullets 4th, 5th and 6th.

#### A. C. Hawkins' Display Pen.

Down the center aisle were several display pens shown with effect, and among them was a pen of Barred Rocks shown by Mr. A. C. Hawkins, Lancaster, Mass., that was just about all that could be asked for in Cockerel mating. The cockerel shown was a wonder in type, with very even and clear barring and the best of color. Head near to perfection and flaming red eyes. There was that something to this cockerel that was bound to attract special attention from every one and around his cage were seen the prominent breeders of all other varieties looking with interest at this beauty male. I can well imagine their thoughts and that their desires were to own birds like them. We can all admire and desire, but it takes the master to breed such birds and to mate them as this pen was mated. Mr. Hawkins is one of our oldest breeders and this variety has been his specialty for 30 years, and in this he has produced many of the famous winners at our best shows.

#### Grove Hill P. Y. Display Pen.

Near by was a Pullet mating pen shown by the Grove Hill P. Y. that also received general attention. It was a very beautiful pen all through, every bird a star, but one pullet in particular as a diamond among pearls. We were pleased to handle this pullet at the request of Mr. Bright, and are free to say that in condition and general quality she is as sweet a bird as we have seen. Her finish was perfection and in evenness of color and wonderful barring surface and under she is a most magnificent specimen. In her we can see the special value of under-barring, and that is her very best section. No specimen, male or female, with inferior under-barring could possibly have such wonderfully rich and deep and sound surface barring. That most desirable clean cut barring, with the strength and clearness of color and contrast is the result of the best and clearest under-barring. Remember this, and let us at all times give under-barring credit for its value.

#### The Winners as Seen.

Barred Rocks—Cocks. First a noble bird of great form, size and evenness of best quality, fine head and rich eyes. Second, nicely barred and of good form. Third, a great bird and a great breeder, he looks it.

Hens—First, a very neat hen but a little dark, barring hardly as straight as on another, shape good; we did not see her handled. The other hens very good, but as a whole not as good as we expected.

Cockerels—First, a very bright and clean bird, well shown and of good type. Second, not at his best and a mite low, but a wonder in color and barring. Third, a very snappy bird, well finished and a beauty head, narrow barred and very fine under. Fourth and fifth, real good ones close up. Sixth, a young fellow, the makings of a dandy, his color and barring very even, of right shade and extra under.

Pullets—Like the hens it was not the class we expected at Boston, with well known breeders exhibiting. There were too many with small size, green legs, indifferent eyes and pinched in appearance. The best of the birds were not shown right and it was a hard class to handle.

Pens—A very good lot. First and second pens very close, both well mated. First Cockerel mating pen a beauty. Male strong and clean and the female very narrow and with grand wings.

**White Rocks**—A beauty class all through and one of the best seen.

**Cocks**—First, a royal dandy in shape and the best of condition; nice long back and great finish; stands well. Second, a grand one, also well shown. Third, a strong bird and one of the best in any class. Fourth, looked like an extra good one to us. Fifth and sixth up close.

**Hens**—First, a beauty hen and in a class all her own, just right in every way, a grand winner. Second and third very neat birds. Fourth, also one you are bound to notice.

**Cockerels**—This looked like a very strong class to us and the first attracted unusual attention. Second, a beautiful specimen and grandly shown. Other winners very good.

**Pullets**—The three leading winners just alike as if they all came from one egg; they did all come from one farm, and believe me it is some farm for White Rocks. They were a great trio, well shown. Other winners and Numbers 416, 419, 424 and 431 up close.

**Pens**—First, a wonderful pen in quality and mating. The male would be an easy winner in any class and at any show, the females matched to absolute perfection. The sensational exhibit of the entire show. The other five winning pens were also very rich in quality and winners in a large and strong class full of birds of merit.

**Buff Rocks**—Rather a disappointing class after the hummer of last year. The winning birds were very good and several without ribbons also looked of rare quality from the outside.

**Partridge Rocks**—A large class full of quality with several exceptional birds seen.

**Cocks**—First a grand winner of the best of color. Second very good. Other winners up to expectations.

**Hens**—First to fifth very even all round, the winner one of great beauty and value, well shown.

**Cockerels**—First a most desirable bird and at his very best here. His color and markings of the best and of beauty form with fine head. Second a royal good one, but not near the first. Third close up and a bird of great merit. Fourth one of promise.

**Pullets**—First and all winners very neat, finely marked and of the proper sound color, a nice class.

**Pens**—The six pens were a very even lot and made an attractive display. First of grand quality and well mated.

**Columbian Rocks**—A quality class with extra fine markings and sound colored wings a feature.

**Cocks**—First a great winner and a bird of form and color with rich markings. Second and third both real hot ones.

**Hens**—First a winner hard to beat in any show. She has made her mark. Second a very desirable hen with grand markings. Others up close.

**Cockerels**—First a real prize of a bird. He could win at any gait, with good form and strong wings and nice head. Second up close and the third also very desirable. Fourth one of promise.

**Pullets**—First a beauty and shown at her best. Second and third grand good specimens. Fourth very clean.

**Pens**—All three pens were finely mated and contained quality birds.

#### Wyandottes.

**Whites**—One of the best classes ever brought together, full of quality and birds shown at their best. The condition was good to see.

**Cocks**—First a typical bird, full of curves, good size and stands well, with nice head, neck and back, tail full and well carried. A proud and beautiful winner. Second another of wonderful form with a great outline, a hummer in every way. Third also a rich one with sound color. Fourth and fifth nearly alike and very handsome specimens, no doubt great breeders.

**Hens**—First a darling of the gods, or of Canada. A model in form and in condition with the best of pure sound color. Second and third up very close, too close for comfort, for such competition scares like —. Nice heads on all. Fourth and other winners very rich.

**Cockerels**—First to fourth as strong a quartet as we could wish for. The winner a beauty, finished to the minute and with as fine a head as is possible to think of, full and deep, with breadth and a magnificent tail. Second also one of the best birds seen. He is right there in every desirable quality. Third and fourth resembled one another very much, and both choice birds. Fifth, sixth and several others up very close.

**Pullets**—All winners and easy fifteen others were in a select class of merit. The winners in particular. First as bright as a new U. S. gold eagle, but with more form than we generally see on that noble bird. Second very sweet and third pleased us very much. Who wouldn't be pleased to own that kind? Others grand.

**Pens**—There were just thirteen pens in line to fill out this noble class. First a wonder and a feature of the show. The male one of the very best, a clean cut fellow of the highest of type and best of quality with a fine head and very strong eyes. The females a choice selection, all just alike and at their best. A pen the equal of which is very seldom if ever seen. Second another beauty and one of the very best in every way. The male very broad and well put up with strong head points and the females grandly mated and moulded from the same die. Third and fourth very similar and great pens. Fifth another rich one showing wonderful color. These five pens were in a class by themselves.

In this great class of great birds and great breeders who to a man and to every award added their approval it is but just for us at this time to again make mention of the judge, Mr. Arthur G. Duston. He deserves unlimited credit for the beautiful work he did. He has been the White Wyandotte champion for years and years, he knows the breed and has given the best in him as a man and as a breeder for this variety. May he live long and meet with the success he so richly deserves.

**Silver Laced**—This old time popular variety was out in force and included many rich birds. Judge Drevenstedt spent most of his time in this alley, for he is a great lover of the fair Silvers.

**Cocks**—First a very clean silvery bird of nice form and

First S. C. Rhode Island Red hen, Chicago, 1912. Bred and owned by Ira M. Crowther, Willoughby, Ohio.

well carried. Second close up. Third and fourth of good type and markings.

**Hens**—Both first and second hot ones, we thought well placed. Third a clean hen free from edging and good centers.

**Cockerels**—First a dandy nice one, and so was the second, both of good promise. Third will make a very fine bird. Fourth and fifth strong.

**Pullets**—A very nice even lot with the first four winners just a little best. Good heads and good markings the rule.

**Pens**—Three in number and well mated.

**Golden Wyandottes**—This class fell to our lot this year and we were delighted with the quality shown.

**Cocks**—First a choice bird in type and very even in color and in markings. Second and third close up. All well shown.

**Hens**—A great class. First a beauty in color and lacing. Second of nice form but darker, has been a wonder. Third and fourth very neat and other winners rich, good birds here with no more ribbons to give.

**Cockerels**—All the winners exceptionally good and very even and clean in color and rich in markings. A nice lot all through.

**Pullets**—The strongest class in finish and value to our mind. The lacing was wonderful to see, sound and clean, and as a rule splendid shape. I would like to have had a list of the special awards to publish with this, as they were a choice and valuable lot.

Buff Wyandottes—A large class of grand color and very good type. There was plenty of merit in all classes here.

Black Wyandottes—But few were shown.

Blue Wyandottes formed quite a class and attracted much attention by their beauty, which seems to just fit this shape. They are taking well and their breeders have every confidence in them. They are beautiful.

Partridge Wyandottes were a small class, smaller than we like to see of this valuable variety. The birds shown were good.

S. P. Wyandottes were a beauty class of 82 birds. They also are coming strong and promise much for the future if they but land in the right breeders' hands and are advertised.

Columbian Wyandottes—A large and beautiful class of 120 birds and with the class seen at Philadelphia as good as we have seen in quality with birds as a rule very well shown.

Cocks—First a typical and strong bird showing vigor and action, comb nice and markings very fine. Second a corking good one, close up. Third and fourth of good size and markings.

Hens—First surely one of the best bred in form and markings. Second a very fine clean hen in good condition. Third also a hot one and of quality. Other winners very strong.

Cockerels—First a bird of character, shapes well and of fine color. Second another good one from his feet up and head down, nicely shown. Third a bird of extra color and

of the highest grade. First a wonder in form, carriage, color and markings. Wing extra fine and head also. He stands well and is full of character. Second also a beauty and in the best of condition, nice wing and tail. Third up very close in every way, sound color and fine wing and tail. Fourth, fifth and sixth very even and all birds of great merit.

Pullets—First one of the rarest in both color and markings and with the best of shape, nicely carried. Second very sweet and in the best of condition. Third a beauty in every way. Fourth just like the other and at her best. Plenty of more good ones seen.

Pens—A rich lot with thirteen in line. The picking was close in these with plenty of quality in seven pens. The first three winners were very even and too close for comfort.

The Rose Comb Reds—Another large class with many choice birds. The general quality was on an equality with the Single Combs.

Cocks—First a good sized bird of clean and bright color with a nice head. Second well shown. Third a very fine specimen of great color. Fifth a grand, even bird of the best of color.

Hens—First, second and third were in a close class, all very fine birds. Others close up.

Cockerels—First a beauty and a great favorite. A bird of wonderful and even color, the best of form and a very fine head. We thought well of this fellow, for with his color he stood up right and was seen by all to best advantage. Second and third very warm ones and of fine type. Other winners very good and many others that showed class.

Pullets—First and second very close, both of the best. Third also a hot one with extra fine type. Fourth and fifth great birds of every quality. Sixth very fine. Nos. 1146 and 1152C were birds of fine even color and extra form, wings very good.

Pens—The four pens were grandly mated, headed by choice males with select females. They were an even lot, well shown.

#### Dorkings.

The Silver Gray Dorkings were a very fine and a large class. We feel for this variety, for knowing it to be one of the very best for all-around quality and seeing it shamefully neglected by the breeders.

#### S. C. Buff Orpingtons.

A wonderful class of 172 birds with the great majority of excellent quality and well shown.

Cocks—First and second were two of the best we have seen, birds of great shape and very even, sound color, solid clean buff as seen in these birds is marvelous. Third a grand specimen, very fine in all ways. Fourth and fifth grand good birds. Sixth no doubt one of the very best when at his best. Nice in type and rich in color.

Hens—The first three winners were the best and up very close, in form and color very similar, all rich quality hens. Fourth and fifth good in all ways.

Cockerels—Here again the three winners stood out strong in all their quality. It was close picking to place them and I would imagine that not over a quarter point was between them. Fourth also one of rare quality and beauty, will make a great cock. Fifth a well shown bird, with grand head and sound color.

Pullets a great class of 36 birds with all the winners and many others birds of the best grade.

Pens a wonderful lot in quality and mating. The six winners were rather easily the best, but they also were close. Good strong males with great color were seen here and females rich in form and color and well mated.

#### S. C. Black Orpingtons.

A very large and beauty class of these royal favorites and we will also add that such classes of Orpingtons as seen here are a high compliment to the judge. Mr. Oke's ability is acknowledged, and the breeders have faith in him, which is well placed.

Cocks—First a great winner seen at his very best. Wonderful in form and the very choicest in color, fine head and stands strong. Second also a dandy and up very close and sound in color, also at his best. Third another wonder in size, form and color, perfectly sound in every particular.

Hens—Here again the first and second stood out in prime condition with shape and color and were good rich winners. Others placed were of highest merit, a dandy class all through.

Cockerels—First a good leader in every way and a most promising male. Second well shown and good head. Third and fourth and up to sixth very fine specimens.

Pullets—First splendid and a good winner. Second one of the best out and third following closely with several more rare ones in line.

R. C. R. I. RED COCK.

Winner of first at Youngstown, Ohio. Bred and owned by M. C. De Loof, Willoughby, Ohio.

markings. Fourth and others of very high grade quality.

Pullets—A royal fine class with type the feature. First a real beauty in every way, nicely finished. Second one of the best. Third strong in wing and markings. Others up close.

Pens—With ten pens in line of a high average it was a grand display. The three winners were a beauty lot and very close. Others up to and above the usual run.

#### S. C. Rhode Island Reds.

A great quality class with birds of wonderful color in surface and under, of all the birds we handled we did not see a bit of smut. Shape also was great, up well on legs with long bodies and fine backs, made it a class worth while. The breeders are doing splendid work.

Cocks—First one of the best out this season, very even and of the very richest and soundest of color. Second a strong bird in every way. Third looked extra fine to us and no doubt a great breeder. Fourth a beauty and well shown. Fifth nice and clean cut, good wing. Sixth one of the best and very even in color. Nos. 1014, 1019 and 1026A and C were dandy fine birds and well shown.

Hens—First one of the best in color, surface and under, good head and fine form. Second also very rich in color. Third very strong in clean rich color. Fourth and others choice hens.

Cockerels—A great class of 41 birds with a dozen or more

Pens—A hot lot with extra males and type the feature. The mating in most of them fine, but a few uneven in size and form. The winners stood out strong in this class.

#### S. C. White Orpingtons.

A fine class showing extra good color and real good heads the rule. I would pick type as the leading feature in this class.

Cocks—First probably wins on form and color, which were excellent. Second nice head and very good all over. Third up close, well shown. Fourth and others grand birds.

Hens—First one of the very best, a rich beauty, positively white. Second about at her best and a dandy hen. Third one of rare quality and a hummer. A hot class with other winners and then some fine birds.

Cockerels—Hot from first to last. The three leading winners very grand in every way, nice heads and the best of color. Fourth fine type and well shown. Fifth and sixth both very strong birds with good points and in rare shape. No. 1442 a bird of exceptional promise.

Pullets—First a great bird of size and form with beauty color, as white as snow and fine head. Second a very handsome and valuable bird. Third another of the very best in all ways. Fourth up close and well built. Fifth and others in a close class.

Pens—The first four pens very even and to our mind very close, all pens of merit and well shown. Males exceptionally fine and females grandly mated with shape and size. The females in fourth pen finished and as even in type as we have seen.

#### Blue Orpingtons.

This class well deserves some special mention, for in both size and quality it surpassed our expectations. The blue color fits the Orpington form like a glove. They breed true to type and color and are sure to make a prominent stir before another year rolls round.

The classes here were well filled and with birds rich in quality and well shown. The breeders surely have in them something well worth while, and they are the kind to push them too.

#### S. C. White Leghorns.

A great class of exceptional beauty and value, seen in the best of condition with fine size and the best of form.

Cocks—First one of the best ever and seen here at his best. A bird of great character, great form and a low, full and well carried tail. Head extra and flaming red eyes. What more can we desire? Second another of great merit with a wonderful head and the best of shape, back just right and fine tail. Third and fourth grand birds, well seen. Fifth a beauty and sixth up close.

Hens—First in a class all alone, one of the rarest of the rare, with fine head and beautiful form. Second a very fine hen and in great condition. Third another of wonderful form and in the best of shape. Fourth, fifth and sixth all red hot quality hens.

Cockerels—All four cockerels from first to fourth stood out very strong, almost alike, in prime condition and of the best form and merit. A wonderful class with the best of heads and beautiful backs and tails. It is hard to pick from them and they seemed just right to me. Fifth, sixth and several others made the going strong.

Pullets—First just about the sweetest thing we have ever seen in a coop. Right in every way. Second strong in form and of fine pure color. Third a beauty of rare quality, with others very fine here.

Pens—Close work here between the four first winners.

#### S. C. Brown Leghorns.

This variety has always appealed to us and here was a beauty class well worth seeing. Birds of great merit were in all classes with good size, extra form and very fine markings.

#### S. C. Buff Leghorns.

A good sized class and with excellent color. The winners were all well placed and were a fine lot.

#### R. C. Black Minorcas.

A very large and beautiful class. This variety has come out strong the past few years and promises much for the future. In shape they equal the Single Combs and also are very sound in color. As these awards were not up when we left (Wednesday night) we failed to get special notes on them. This also applies to several other classes.

#### Other Varieties.

Black Spanish—A large class and a very good one. The feature of it was the exhibit of Mr. R. A. Rowan, Los Angeles, Cal., who won about all there was to win.

Anconas—Another great class and as strong a class as we have seen with first pullet the gem of all.

Houdans numbered 53 birds and a good lot. I don't know

how Boston does it, but they do show strong classes and an even balanced show.

Polish in all varieties were seen with the White Crested Blacks in the lead in numbers and of rare quality.

Hamburgs in all varieties numbered 200 birds and they had the quality and no mistake about it. First Golden Penciled hen the best marked bird we have ever seen.

Campines are all the rage, but we also missed notes on this class to our sorrow. The Silvers were an extra fine class of quality birds and well shown. The Goldenes are coming strong and are to be admired.

Standard and Pit Games filled many cages and were a royal attraction to many. Cornish were of high grade, birds of exquisite type and with the best of color and markings were seen here. White Laced Red Cornish were shown to advantage. This was our first experience in handling this class.

Ducks were out in goodly numbers and in Boston quality.

Turkeys, in Bronze particularly, a very strong class. Bill Minich and Dick Okes spent several hours interviewing the winning gobbler. When we passed we heard Bill ask him how he did it, and Dick was witness.

Geese a great class in numbers and in quality.

First Prize Cockerel at Indianapolis, 1912. One of the fine Buff Orpingtons in the yards of F. A. Kaup, Buff Orpington specialist, Chicago, Ill. He has just issued his 1913 edition of the Buff Orpington Guide Book, the finest catalog-mating list published by a Buff Orpington Specialty Breeder. If you will mention the American Poultry Journal he will mail a copy to you free.

From A to Z, from the front to the back, the show was complete and displayed to the best advantage. All varieties were represented by worthy classes and with unusual quality. In no class did we see inferior birds win on account of lack of competition. It matters not what you breed, send them to Boston and you will find competition there and have the satisfaction of knowing that your honors are well won.

Boston awards have a value, and it is a high one. Look over their list of exhibitors and you will find them to be the best in the land. This great show and the men back of it well deserve every credit, and in this respect we have tried hard and earnestly to give credit where due to both the birds, the breeders and the management.

To review this exhibit is a pleasure, and the question arises—Can Boston again next year show the improvement in quality and numbers over this that we have seen in the past? For years they have put on record exhibits and wonderful displays, each in turn to be outclassed by its own successor. We can answer this question right now by saying "Yes," and we will again answer it if living a year later in the same way. The capabilities of that little secretary, and the confidence the breeders have in him, will assure greater Boston shows for time to come.

# The Rhode Island Red Fowl Described

Practical Illustrated Interpretation of the American Standard of Perfection, as Applied to This Popular Variety.

By E. T. DeGraff

JUDGING by the general tone of hundreds of letters I get from amateurs, and the questions I have heard asked at the large shows I have attended this winter, there is a wonder variation as to how the Standard is practically interpreted.

As I have studied the judging of judges at the four largest shows held this winter, and taken photographs of most of the winners, for my reports of these shows, I feel I have had the benefit of an experience that few have taken the trouble to follow up. I intend to give the reader the benefit of what I have learned from ten years' practical experience in breeding and exhibiting

Reds, and my careful study necessary to develop my true to life colored pictures which are acknowledged to be the highest grade poultry pictures ever published.

Many look upon the Standard as some sacred epistle that has been handed down to us poor mortals here below, and don't seem to know the why and wherefore of its existence at all.

The American Standard of Perfection printed and copyrighted by the A. P. A. is nothing but a compromise of the many different opinions that may have prevailed as to what the ideal of any breed of fowls should be, to govern its future development, and establish a foundation for judges to base their decisions in selecting the prize winners at our poultry shows.

At Fall River, Mass., in 1898, there was held a meeting of few but enthusiastic breeders of Reds, who formed a club and voted the officers there elected the power to act in any way to promote the interests of the breed. In 1901 a meeting was held at Boston in which it was decided to adopt and copyright a Standard on the lines of what had generally been the accepted ideal, after much discussion pro and con. At the A. P. A. meeting held at Rochester, 1903, several prominent Eastern Club members combined their best birds and made a very creditable showing of what had up to this time been christened by the old line breeders, "The Great American Dunghill."

Largely through the efforts of Hon. C. M. Bryant, who had acted as president of the club for several years, the

S. C. Rhode Island Reds were admitted to the Standard, placing them on equal terms with all other breeds in the race for public approval.

Unfortunately there was so much wire pulling, and too many interests to be satisfied, that sufficient forethought was not exercised among the officials of the A. P. A., that the American Reds and Buckeye Reds were also admitted at the same time.

This action aroused strong sentiment in the club, and there was much public discussion for a year afterwards, until the American Reds were wiped off the face of the earth and Rose Comb Rhode Island Reds were admitted to the Standard as a second variety of the Red breed. That is was a mistake to ever have admitted the Buckeyes as a breed has been proven, as they evidently will never win public approval.

When the Standard pictures were adopted, it was very noticeable that the ideal profiles and the printed description did not jibe, and it was evident at some shows that the judge's opinion did not jibe with either one, as he was judging entirely by what he thought should win. The popularity of the breed grew so rapidly that naturally there arose jealousy and discontent among the breeders, because the club officials were always confined to a select clique in and around Boston and Fall River, so that several opposition Red clubs were formed, and the accepted standard received much discussion, part of which was adopted at the revision meeting held at Niagara Falls in 1909. To show how fickle public opinion is, I will state that the A. P. A. revision committee when it met at Chicago, Ill., adopted all the suggestions made by the Western Red Club and when the Eastern Red Club made a united effort they succeeded in changing all the points they desired, except a few, and the present standard was adopted, which can not be changed till 1914.

The principal point of contention among breeders was whether there should be ticking in hackles of females or not, and whether it should be allowed in males also, which was decided to go against nature and have ticking in hackles of females, and not in males, so that every show held in the country today, we see males shown with a large part of their hackles pulled out to remove the ticking, which the judges are overlooking so far, as an example of tampering with nature, while males of all ages are being sold, with the

No. 1—No better balanced Red cock has been shown to my knowledge, and the fact that he took first prize at Madison Square Garden, together with shape and color special club ribbons, in a large class, proves he has extra strong points throughout. I consider his breast, back and tail development far above the average prize winner, and about as desirable a breeder for type as any fancier could expect to use. No. 2—Many desirable points in a fully developed cockerel about a year old are shown here as I like to see them. I consider his breast, back and tail development about as good as we can expect to get them, and the fact that he is just as picture shows, means a whole lot, when compared with drawings. The comb is larger than natural from effects of two shows. No. 3—This partially developed cockerel shows many desirable and promising features in a young male when about 6 to 7 months old. His breast, back and tail are all could be asked for at his age, while the apparent length of legs will disappear as he matures. It is better to have a good frame to build on than a small, compact bird early to mature, but never reaching the proper weight.

continual uncertainty whether the young growing cockerel will lose his ticking or not, and whether the cockerel that is free from it as a cockerel may not develop it when he moults, all of which is very unsatisfactory to the amateur breeder, who feels he is being humbugged.

As the reading matter and profile cuts of Standard are copyrighted, and you can not buy any separate breed standards for Reds you will have to buy the whole book to learn what you want to know about Reds, but I have the privilege of giving you my interpretation of what I consider ideal specimens by

No. 7—I have never seen any picture that shows the good points of an old hen better than this one. You can see the uneven plumage due to lack of strength in each feather, and drain from many years of laying, still her vitality shows out strong in eye and head, and she is good for several years as a layer, and the strongest of breeders.

No. 8—I consider this picture shows the many good points desirable in this breed better than anything I have ever seen in print. You can see the vitality, ruggedness, alertness, together with full breast, wide low tail, and strong legs well spread, which are vital points in every money-making fowl for eggs or meat.

showing pictures from life of birds that I consider as near my ideal as any I have ever seen. The motive of the standard is to give the amateur information that will enable him to know his prize-winning Reds from his inferior stock, but when we consider that the same cuts are used and same description applied to old and young of all ages you can see the object is not entirely accomplished, and much individual interpretation is exercised in its practical demonstration. As competition in shows include all ages, I will show the differences that take place, as the bird matures, although equally high grade specimens at each age. The promising young cockerel shown just before reaching standard weight gives promise in every way of being an exceptionally fine specimen, still the judge should not bank too much on promises, as very often they are not fulfilled. The finishing touches of any bird may develop faults that could not be foreseen, such as white in under color, white feathers, ticking in hackle, may come and may disappear, while some males change the angle of their tail carriage entirely, and even change their type entirely in a month's growth. The matured

cockerel shows a very well-proportioned, well-balanced male just as he reached Standard weight, and there is little doubt but he will develop into a grand, good cock bird, and may look much like the type shown in the matured cock picture, as this shows a male fully matured, rounded out in all parts, with full sickled tail, which seems to be a weak point in so many really good Reds in other respects. The oblong body is very marked in each specimen, and you must always make some allowance in the apparent length of legs of photographs taken at this elevation, as we are accustomed to look down at a bird. While the Standard color, "rich even red," applies to pullets, hens and old hens, still I have seen but two hens this whole winter's showing that could be said to be anywhere near the color we are giving prizes to in pullets, and one of these "Lady Graffmoore," took the color special over all pullets in show, which proves her color was what we are all looking for but seldom ever see in hens of any age.

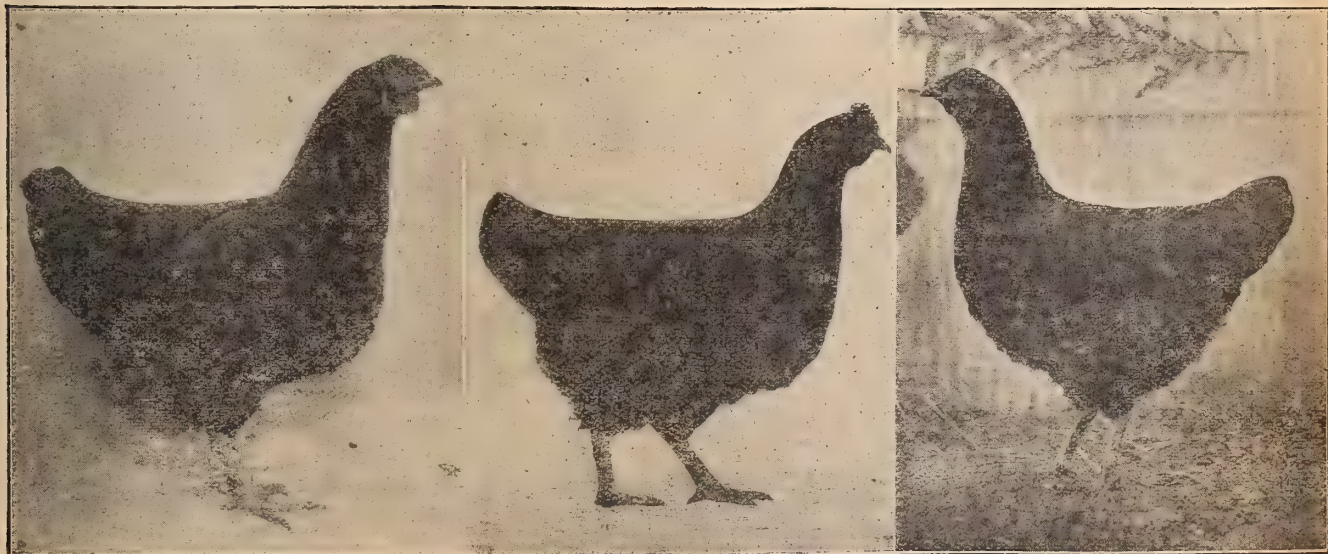

The amateur should know that mighty few Red hens ever have the color they had as pullets, but will moult out lighter, and if of a good even harmony, although lighter, you have what any judge will consider above the average hen, if her type is right.

The pullet picture shows that velvety finish that often decides the winner in pullet classes, which I feel is sometimes a mistake, as this bloom of perfect health may disappear more or less as she lays eggs, while the typical formed pullet will not lose but improve as she gets busy, so shape should count half of any prize bird, and for utility purposes type counts much

I give these photos of what I consider good breeding and good show heads, but there are many things that can't be shown in pictures. In some of the pictures shown, there was a slight move in photo which necessitated slight retouching to bring out detail, but no head has been changed from what nature made it. It is all nonsense to expect any bird to hold its head in a certain position, as you can't get them to hold still long enough to even get a snap shot.

more. The hen picture shows one of the best balanced hens that I have photographed this winter, and she is as good as the picture throughout. The old hen when taken was seven years old, so you can excuse the unevenness of plumage, but her vitality shows out strong for her age. The other hen picture was taken eight years ago, and I have never taken a picture since that shows the strong desirable points of a Red hen better than this, namely, vitality, ruggedness, alertness, wide breast, low wide tail, well spread, and ability to forage and

No. 4—This unfaked picture shows about as perfect a hen as I have ever seen exhibited in "Red Alley," and when you consider that her color was nearly perfect, you can imagine the value of such a specimen. Very few hens have this bird's breast, back and tail position and development, which are very desirable, but seldom come all in one bird. No. 5—While this picture is not as satisfactory as the bird merits, I will say I never saw a more typical shaped hen in real life, as the oblong square free from curves, was emphasized to perfection, and her length was even more than could be expected in average specimen. Her flat back of extreme length is unfaked. No. 6—The velvety finish of a prize winning pullet just at the right age, is shown as plain as any picture could show it, and the development and type at this age in pullets is about as I like to see it. Very small, rich colored pullets should never win, when birds of this type are shown, even if lacking slightly in color, as vitality and type are half of every good Red.

scratch for her living if circumstances are such she can do it.

While the Standard description of what color a wing should be generally gets the amateur all at sea, and the color of the small feathers at base of wing is not given at all, still I believe the accompanying pictures will give the idea where and how much black there should be on wings of both male and female, while females that get it as strong as this are very scarce, and if right otherwise very valuable either for showing or breeding.

When we stop and think of the wonderful improvement that has been made in Reds in this short time, and their wonderful unprecedented popularity ever increasing, we should realize that we have a grand opportunity in them for future development. As we pass through this world but once, any good therefore that we can do or any kindness we can show to any

human being let us do it now, lest we defer or neglect it, for we shall not pass this way again.

If your Reds have not been coming as you would just like to have them, remember they are made up of crosses for years back and are liable to strike back to inferior ancestors, and try to remedy your weakness by buying the best you can buy to correct it.

"If the day looks kinder gloomy  
An' your chances kinder slim;  
If the situation's puzzlin'  
An' the prospects awful grim,  
An' perplexities keep pressin'  
Till all hope is nearly gone,  
Jus' bristle up and grit your teeth  
An' keep on keepin' on."

## The Proper Care of Young Chicks

"Well Hatched is Half Raised"—Artificial vs. Natural Incubation—  
Fresh Air Both Day and Night Important *By Chas. L. Simmons*

THE AVERAGE POULTRYMAN considers it much easier to hatch a large per cent of the eggs he sets than to rear a large per cent of the chicks hatched. The reason is that many chicks are hatched that it is impossible to raise to maturity. The number of chicks hatched depends largely upon the vitality of the eggs. Every time the temperature in the incubator runs too high or too low, or if the eggs are cooled too long, or there is not enough moisture the embryo chick is weakened. If the eggs were laid by strong, vigorous breeding stock that were given good feed and care the eggs will stand considerable abuse during incubation

and still hatch a goodly per cent of chicks, but the chicks will be weakened in the same degree as if they had come from weak embryos in which case they would not have hatched at all. The experienced poultryman can produce birds of apparently equal quality by artificial and natural methods of incubation and brooding. But unless one is skilled in operating incubators and uses only the best makes he cannot hatch strong, vigorous chicks such as the hen hatches. There are several reasons why hen hatched chicks might be expected to be superior to incubator hatched chicks. One reason is that the white shelled eggs of Leghorns hatch much better in incubators than do the brown shelled eggs of American breeds (especially Red and Buff varieties that lay a very dark shelled egg), while the thick brown shelled eggs of Brahmas and Cochins are extremely difficult to hatch in incubators though hatching as well under hens as Leghorn eggs.

Fresh air both day and night is now recognized as one of the first essentials to the health of fowls of all ages, but the incubator chick must remain in the tight walled incubator with his brothers and sisters until the last chick is hatched and thoroughly dried before he receives an opportunity to fill his lungs with fresh, pure air. The chicks in the incubator will be noticed to breath fast and with open mouths as if they were suffocating after a large number have hatched. But notice a brood hatching under a hen, no matter how cold the air outside, they will thrust their beaks from under the hen's body and breathe pure air almost as soon as hatched. The chicks crowding against the glass door or scrambling around the edge of the incubator shows they are trying to reach fresh air. There are several other reasons why the hen is superior to the machine for hatching chicks and it will pay any poultryman to keep a good flock of hens of same setting breed. If one uses the "Wozelma Incubator," or some similar nest for the setters setting a number of hens at a time, the labor and expense of hatching with hens is much less than with oil heated incubators.

However, the average chick produced from strong parents is able to stand considerable hardship and a few incubators are mighty handy when one desires to hatch a large number of chicks in February and March. The main point with either hens or incubators is to give them the proper care and attention and set only medium-large eggs from properly mated vigorous breeding stock, remembering that "Well hatched is half raised."

After the chicks are hatched the brooding question comes up for consideration. If ones time is worth about five cents an hour and he has a heated building in which to start the

young chicks in cold weather he may seriously consider fireless brooding. Most of us are not so fortunately (or unfortunately) situated. The coal heated brooder stoves and the movable (oil heated) brooder-hovers now on the market have the fireless brooders, long pipe brooding systems and small box so-called "outdoor brooders," beaten from every standpoint. When the lamp or heater needs attention it is easily and quickly got at and there is no time lost teaching chicks to climb up and down stairs or to all run in the fireless brooder every time the weakest member of the flock must be "thawed out." When the warmest place is the center of the room and the air gradually gets cooler towards the four corners of the room, the chicks will select just the right temperature for their individual needs and will keep comfortable and contented if properly fed.

In using hens for brooding, the main points are to select quiet, gentle hens and keep them confined all the time. The early chicks may be started in a colony house confining the

Champion Rose Comb Black Minorca cock. Bred and owned by Ross Swartout, Newport, Ont., Canada.

hens in small coops made of lath and giving the chicks the run of the house. After the grass starts to grow in the Spring the chicks may be allowed to run outside. When the hens are no longer needed they may be removed and the chicks can grow to maturity without being moved to another house, which is quite an advantage. As soon as the vegetation starts in the Spring the chicks will do better if cooped out of doors but they should have a good coop with board floors and three sides and the roof tight. A pen of lath may be used in front of the coop to confine the hen and the chicks given free range. But it is important that they have a good place to range. A grass range for baby chicks is as undesirable as a range of hazel brush or a wild blackberry patch would be for mature fowls. If they run out in the grass early in the morning or after a rain they get wet, which is sure to stunt their growth. They will become tangled in tall grass and often lost, which results in their

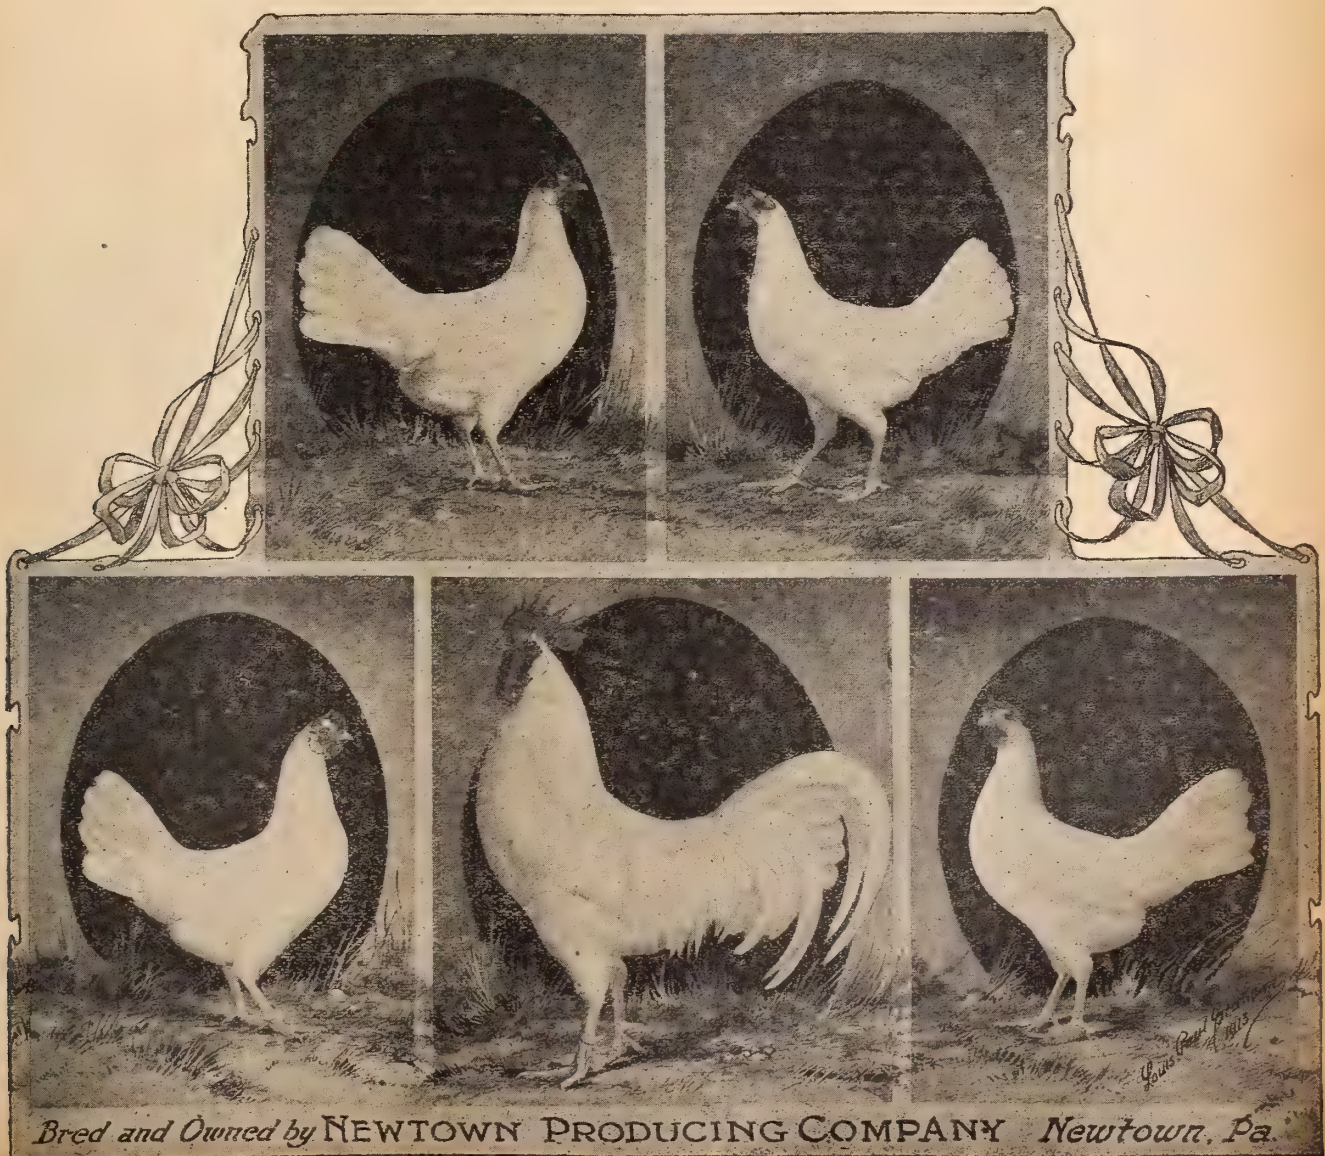

only ranging a distance around the coops where they can keep the grass trampled down. Of course a lawn where the grass is kept short by the lawn mower is not so bad, but is generally not so convenient or desirable as a tilled field. A corn field makes an excellent place to rear chicks. Several rows should be missed when planting to give an open space in which to coop the hens and make it convenient to care for them. Not being bothered with tall grass they will range in the shade of the corn all day and will secure sprouted weed seeds and many insects every time the corn is plowed.

Properly feeding the chicks is very important especially early in the season when they are confined to the house. I can find nothing so good for the first few days as "johnny cake," or corn bread made from fresh corn meal and buttermilk. I use it exclusively for the first few days and alternately with cracked grains for the first three or four weeks. When the chicks are confined it is very important to bury the cracked grains in a deep litter of cut straw or alfalfa. To make the chicks exercise? No, they will take sufficient exercise trying to get out of the house and running around hollering for more feed after they have gulped down what is fed them. But bury the grain in the litter because it is the nature of the chick to be scratching and hunting for something to eat and they are more contented when doing so. That is the great essential. Keep them happy and contented and do not have them yelping for more heat, more or different feed or for lack of something better to do. Plenty of fresh meat and green food is essential where the chicks are confined. If you don't think green food is essential just try feeding a flock of chicks on an exclusive grain and meat diet till they loose their appetites and their plumage assumes a dry, dead look, and then begin feeding freshly ground raw potato and watch them take a new lease on life. I can find nothing in the line of green

food so good, cheap and convenient as raw potato fed every day all that the chicks will clean up. Fresh, raw meat is better than beef scraps, and while more expensive, the chicks require so little feed the first few weeks that the best is always the cheapest regardless of first cost.

Bulky, fibrous food is also essential and for this wheat bran may be kept in a box before the chicks all the time. Chicks that are confined will eat large quantities of bran but if given free range they will secure the necessary bulk and fiber in the grass and weeds they eat and will not pay much attention to the bran. The reader will notice that I did not mention "sharp" grit as the "first feed." Grit is not necessary till the chicks begin eating hard grains and then coarse sand or fine gravel is best. Chicks on free range can generally secure sufficient grit. Undoubtedly many chicks are injured by eating too much grit, millet seed and hard weed seeds the first few days of their lives. If commercial chick feed is used it should be composed of nothing but sound, freshly crack grain, no grit, millet, weed seed or musty grain. The safest plan is to crack and sift your own grain and buy "steel cut" oats that is prepared for human food. Great care should also be taken to keep plenty of fresh, pure water always before the chicks. Probably more chicks are lost from compelling them to drink sour, fowl water than from any other cause. It is not enough to simply renew the water several times a day, but the drinking vessels should be scalded or a little permanganate of potash placed in them frequently. Fresh sour milk is excellent feed and may be given the chicks to drink or used to mix mashies. It is not only a great feed but a bowel regulator and conditioner. Hulled, "steel cut" or "pin-head" oats is a valuable grain food producing quick, sturdy growth and large boned chicks. Boiled rice or oatmeal will correct diarrhoea.

Notary Public.

## OUR GUARANTEE.

We guarantee our subscribers against  
loss due to fraudulent misrepresentation  
in any display advertisement appearing in  
the American Poultry Journal, providing  
the subscriber when ordering the fowls  
or merchandise states that the advertise-  
ment was seen in the American Poultry  
Journal, and places the order during the  
month or months in which the ad is in-  
serted in our columns and notifies us of  
the fraudulent misrepresentation of the  
advertiser, giving full particulars, as soon  
as it occurs.

## Will Small Flocks Lay Better Than Large Ones

It is often stated and generally be-  
lieved that fowls kept in small flocks  
and very carefully attended will pro-  
duce a greater percentage of eggs than  
fowls kept in quite large flocks that  
do not receive as much care.

Without giving the subject much  
thought, we have assumed this to be  
a fact, but have considered that the  
saving of labor and time in care of  
large flocks made up for possible loss  
in number of eggs. In view of our own  
experience and reports of large flocks,  
which have come to us of late years, we  
have come to doubt the practical value  
of small flocks when it comes to actual  
production of eggs.

While the data given herein is only  
fragmentary, and not at all conclusive,  
it is an interesting comparison. We  
have before us at present writing the  
total egg production for each week of  
four weeks in January for the first and  
second years of the North American  
Laying Competition at Storrs, Conn.

In this contest at Storrs there are  
500 layers. They are in pens of five  
layers each, with about fourteen square  
feet of floor space per bird. The houses  
are Gillette open-front houses, 12x12  
feet each, divided into two pens. The  
birds are fed a dry mash in hopper and  
scratch grain in automatic feeders (not  
exercisers but feeders which feed read-  
ily at the turn of a bait bar that is  
within comfortable reach of the fowl).  
They get fresh water regularly and  
have all the grit, charcoal and shell  
they need. The vegetable food supply  
is quite regular. These 500 fowl get  
attendance from three men a good part  
of the time and four some of the time.  
The houses are kept in good order and  
show condition most of the time, and  
the birds use trap nests. They are  
over-cared for rather than otherwise,  
which may account in a measure for the  
failure to show remarkable productivity.

tify us of any mistake, no matter how  
slight. Note the expiration date which  
appears thereon, as American Poultry  
Journal stops with the issue marked on  
your wrapper.

If you change your address give both  
your old and new address as well as your  
subscription number when notifying us of  
the change.

AMERICAN POULTRY JOURNAL is  
the oldest poultry paper in America. It  
has a national and world-wide reputation.  
The best writers on poultry matters con-  
tribute to its columns. It receives the  
patronage and endorsement of the fore-  
most representative breeders of standard  
poultry and manufacturers of poultry ap-  
pliances in the country.

Bear in mind, though, that these birds  
represent twenty-one popular varieties  
and were picked specimens entered by  
their owners to compete in an inter-  
national laying contest. Here is the  
record for four weeks in January in  
1912 and 1913. Total production for  
500 fowls in contest:

	1912,	1913,
	1st	2d
	year.	year.
	Eggs.	Eggs.
Ending Jan. 9 (10th week).	875	671
Ending Jan. 16 (11th week).	779	734
Ending Jan. 23 (12th week).	786	843
Ending Jan. 30 (13th week).	982	1,000

During the twenty-eight days of Jan-  
uary named above, the average daily  
yield for the flock during the first year  
of the contest was 24.6 per cent; during  
the second year contest the yield for  
the corresponding twenty-eight days av-  
eraged 23.2 per cent.

We have before us the egg records of  
the Wozelma Farm's flocks for the  
same period in 1913. The record is for  
1,000 layers, which includes quite a  
number of late-hatched pullets. These  
birds are fed on dry mash in boxes.  
They have scratch grain in automatic  
feeders. They are housed, in flocks of  
from 100 to 145 each, in Woods open-  
front houses; each house is 20x20 feet,  
except one, which is 10x16 feet, and the  
average amount of floor space per bird  
is about 3¼ square feet. One man  
takes entire care of the 1,000 layers and  
has abundant time for other work. The  
fowls are disturbed as little as possible.  
They are fed twice a week. The eggs  
are collected daily in moderate weather  
and two or three times a day in very  
cold weather. The fowls run outdoors  
every day unless it storms so hard they  
can't get out. They have green food,  
rather irregularly, as it is available.  
They are watered once a day when the  
ground is bare. When there is snow on  
the ground they eat snow; they seem to  
prefer it to drinking water and they  
are not watered if there is clean snow  
convenient. They have plenty of grit,

shell and charcoal. The proportion of  
corn (yellow corn) whole, cracked, and  
meal, in their food is much greater than  
was used in the first Storr's contest.  
House cleaning is scheduled to be done  
twice a year, but the houses are in very  
good order and the birds in fine condi-  
tion. There are three American varie-  
ties represented in this 1,000 layers—  
Rocks, Reds and 'Dottes. These birds  
were selected for utility values, health  
and egg production from the farm's  
yearlings and 1912 pullets. Here is  
their record for the four weeks corre-  
sponding to the Storr's contest flocks:

	No. of
	eggs.
Ending Jan. 9.....	1,509
Ending Jan. 16.....	1,799
Ending Jan. 23.....	1,870
Ending Jan. 30.....	2,375

Average daily yield for the flock of  
1,000 for the twenty-eight days of Jan-  
uary named above was a trifle over  
26.97 per cent. Here it will be noted  
that the large flocks left largely to care  
for themselves did 3.77 per cent better  
than the 1913 and 2.37 better than the  
1912 records of the much cared for  
small flocks. This may not follow  
through the year, but we think it will,  
and we doubt very much if the 1,000  
layers in large flocks require or get one-  
eighth as much labor as the 500 in small  
flocks. Basing our estimate on an av-  
erage week, we find that twenty-eight  
hours a week for one man will cover  
the actual time spent in caring for the  
1,000 layers, and this includes grinding  
and mixing all food as well as water-  
ing, feeding and egg collection. Figur-  
ing an eight-hour day, that leaves the  
man 2½ days a week for extra work  
and a day of rest in every seven. Com-  
pare this yield, which we believe we  
can better considerably another season,  
with that of the much attended small  
flocks of selected contestants in roomy  
quarters.

This same flock of 1,000 layers during  
the ten days ending February 9th pro-  
duced 4,212 eggs, or an average daily

yield of 42.12 per cent for the flock. This in spite of the fact of much colder weather, ground covered with snow and consequently no drinking water provided, the birds running out in the snow and quenching their thirst by eating snow. We don't say that 1,000 fowls in small flocks handled in practically the same manner would not have shown a better performance. We don't know about that yet, but would they do enough better to pay a profit on the extra labor and the additional cost of housing? Will small flocks really lay better than large ones? What is your experience?

### Unequaled New York Record

It takes time and several readings to fully appreciate the merit and value of the phenomenal winning made by Mr. E. B. Thompson with his "Ringlet" Barred Plymouth Rocks at the 1913 Madison Square Garden New York show. During the past twenty-four years of this truly great show many wonderful records have been made by Mr. Thompson and other breeders, but no record has ever been made in a greater class of superior quality throughout or one so complete. The competition was terrific. Every one of the 191 birds competing bore rings of quality and by right were worthy of the most careful consideration, for every coop contained an idol and a hope. The best that skill and modern ability could produce was there. In this sensational class Mr. Thompson won:

Cocks, 2, 3, 4, 5.  
Cockerels, 1, 2, 6, 8.  
Hens, 3, 4.  
Pullets, 1, 6.  
Exhibition pens, 1, 2, 5.  
Cockerel mating pen, 1st.  
Display, 1st.

Sweepstake specials for champion male and champion female, shape and color specials on males, special for best cock, hen, cockerel and pullet, silver cup for best pen, Spratt's gold special, etc.

No words of ours can add to the brilliancy of this record of all records. It stands out clear and strong to the credit of this one man who has by it ably demonstrated the value of his line, the results of his study and life's work, the results of careful and judicious line breeding and the success possible to attain. Mr. Thompson has mastered the breeding questions. He has done something really worth while, and we are pleased to give him full credit.—H. P. Schwab.

### Cancer in Fowls

In this issue appears an illustrated article by Dr. Harvey R. Gaylor, director of the State Institute for the Study of Malignant Disease, Gratwick Laboratory, Buffalo, N. Y., on "Cancer in Fowls and Its Prevention."

The question of cancer in fowls is a very important one, and this article should prove of considerable interest and value. Dr. Gaylor asks for co-operation of poultry breeders in providing valuable material for research work. We hope everyone who can will help.

Under date of February 3d, Dr. Gaylor writes that "there is a bill before the legislature deeding a farm of 32 acres near the town of Springville, N. Y., to the state and asking for an

appropriation of \$20,000 to equip it as a breeding farm and experimental station for the study of disease in its relation to heredity and for the study of transmission of malignant disease through the various varieties of lower animals. One of the most important activities of this new suburban experiment station, which is to be a part of the State Institute for the Study of Malignant Disease, will be the experimental study of the transmission of cancer and allied diseases with chickens."

Here is a great work for the human race from which much good must come. Cancer is now given much more often as a cause of death than in former years. The scourge, which up to the present time has defined successful treatment, is apparently on the increase. That the disease affects fowls as well as other animals has been known for some time, but very little information of real value has been available. Works on poultry diseases contain only meager mention. The State Institute at Buffalo seeks to learn the cause, the mode of transmission, the danger (if any) of transmission from animals to man, the relation to heredity, and the prevention and cure of the dread disease.

The poultryman has here his chance to share in a great work for a great cause. Read the article. You will note that the institute is in need of live poultry affected with malignant growths for use in its experimental work, and is ready to pay market value for suitable specimens. Search your flocks for fowls having fleshy tumors that grow rapidly. Send a description of any such to the institute as requested. And here let us make a suggestion: If you find any specimens that apparently have cancer, don't set a price on them; offer to send them without charge in the interest of the cause if the institute cares to pay transportation.

### A Remarkable Bulletin

Maine Experiment Station has issued a rather remarkable bulletin, No. 205, entitled "Mode of Inheritance of Fecundity in Domestic Fowl." On its title page the following statement is made:

"This bulletin gives a detailed technical account of the latest results of the experiments in breeding for egg production, at this station. The manner in which the productive ability (fecundity) of hens is inherited is described."

The greater part of this bulletin is given to technical analysis of experimental data. We have not time or space in this issue to review the bulletin, but hope to do so in a later number. Dr. Raymond Pearl, biologist of the station, is the author. Some of the conclusions given appear on first reading not to be substantiated by the data given, and to be somewhat conflicting in nature.

The count of oöcytes (seed eggs) found in the ovary of the hen is interesting and, we believe, new. Count was made of the oöcytes visible to the unaided eye. Undoubtedly there are many more oöcytes than are visible, and the count is not considered as representing the total number, but as establishing minimum values, since "a given ovary certainly does not carry any less than the number of visible ova." In ovaries examined in from fifteen hens, the total count of visible oöcytes showed a low count of 914 oöcytes and a high count of 3,605 oöcytes, with an average of

above 1,800 seed eggs per hen."

In his summary of "the essential facts brought out in this study of fecundity, appear to me to be the following," Dr. Pearl makes the following statements. (We have not included the complete list of "facts," and we have not yet made a sufficiently careful examination of the bulletin to arrive at the conclusion that Dr. Pearl has really proved his "facts." It appears on first reading that some of these "facts" require more satisfying proof than is found in the bulletin.—Ed.)

"1. The record of fecundity of a hen, taken by and of itself alone, gives no definite, reliable indication from which the probable egg production of her daughters may be predicted. Furthermore, mass selection on the basis of the fecundity records of females alone, even though long continued and stringent in character, failed completely to produce any steady change in type in the direction of selection.

"2. Fecundity must, however, be inherited, since (a) there are widely distinct and permanent (under ordinary breeding) differences in respect of degree of fecundity between different standard breeds of fowls commonly kept by poultrymen, and (b) a study of pedigree records of poultry at once discovers pedigree lines (in some measure inbred, of course) in each of which a definite, particular degree of fecundity constantly reappears generation after generation, the 'line' thus 'breeding true' in this particular. With all birds (in which such a phenomenon as that noted under (b) occurs), kept under the same general environmental conditions, such a result can only mean that the character is in some manner inherited.

"3. The basis for observed variations in fecundity is not anatomical. The number of visible oöcytes in the ovary bears no definite or constant relation to the actually realized egg production.

"4. This can only mean that observed differences (variations) in actual egg productions depend upon differences in the complex physiological mechanism concerned with the maturation of oöcytes and ovulation."

"8. High fecundity may be inherited by daughters from their sire, independent of the dam.

"9. High fecundity is not inherited by daughters from their dam.

"10. A low degree of fecundity may be inherited by the daughters from either sire or dam, or both."

Without going into lengthy comment, we can't reconcile statements 8, 9 and 10, and we don't find the "proof" in the bulletin sufficiently clear. If low fecundity can be inherited from the female parent, why is it that high fecundity cannot? Does a pullet get all its good traits from the male parent, and only poor ones from the mother? Isn't it quite possible that the "complex physiological mechanism" of the production of eggs, and what really goes into the eggs, is still very poorly understood?

Of course, the hen is provided with a much larger number of oöcytes than are ever likely to mature into eggs. Nature is everywhere prodigal with seed. Just why some hens are unusual producers, and some poor ones, or why the same hen will lay remarkably well some times and poorly at others, is still open to further explanation. Try a known good layer by keeping a nest

full of eggs always in her pen, and note whether or not she stops producing and becomes broody. Give her the opportunity to have a nest full of eggs any old time, and see how often she becomes broody in a season, and note how much it cuts down her actual production. Take another equally good layer, and remove her eggs from the nest as fast as she produces them, but otherwise care for her the same as the first hen. Compare results from both. If you breed pigeons (it is probable that the laying function is performed in much the same manner in birds as it is in hens), breed a pair in a pen by themselves, and another pair in a similar pen. From the first pair remove one egg from the nest as soon as the second egg is laid, always removing the oldest egg, and note how long you can keep that pigeon laying. Let the other pair nest in the usual manner, and compare results in actual egg production. Note how soon the pigeon will sit after it gets two eggs to sit on.

That is enough for the present on this subject. We simply offer the suggestions to set you thinking and experimenting. We have asked H. H. Stoddard to write a review of Dr. Pearl's Bulletin No. 205, and hope to have same for an early issue.

#### Uncle Sam's Girls' Poultry Clubs

Truly, this is the woman's era. Suffragettes are marching on our largest cities. They have captured important States. Not content with governing mere man at home, they propose to take a hand in governing all men. Do we believe in "Votes for Women"? You bet! We don't know what they are going to do with 'em when they get 'em, but if the women want to vote on an equal footing with the men, don't try to stop them. They can probably do it better than we can, anyway. Did you ever notice how much better they can raise chickens and persuade hens to lay than a man?

Well, your Uncle Sam knows that it is the women that help to keep "Biddy" Hen on the farm. The average farmer man doesn't have much use for hens, as a rule. The farm wife manages the farm flocks; often she keeps hens on the farm in opposition to the wishes of the men folks—and she makes them pay. The farm wife's poultry and eggs pay the grocers' bills and help to pay

for clothing for the children and many necessities, and sometimes have helped to pay off the mortgage on the farm. Your Uncle Sam, down in Washington, hasn't been blind to what has been going on, and now he is going to take a hand in an endeavor to help for better poultry on the farm and more of it.

Harry M. Lamon, senior animal husbandman in poultry investigation, Bureau of Animal Industry, United States Department of Agriculture, with his able assistants, is devoting some effective work toward the organization of Girls' Poultry Clubs. The object of forming these clubs "is to give a better knowledge of the value and importance of the poultry industry and the marketing of a first-class, uniform product; to teach better methods of caring for the poultry and eggs, and to show the increased revenue to be derived from well-bred poultry, where proper methods of management are pursued."

The following recommendation is made by the United States Department of Agriculture in the matter of organization if Girls' Poultry Clubs:

"Throughout the year, meetings should be held to discuss the different problems of poultry management, and at such meetings the Animal Husbandry Division of the Bureau of Animal Industry, United States Department of Agriculture, will have in attendance, whenever possible, one of its specialists on poultry, to assist in solving such questions or problems as might arise, and to give whatever help and information he can to the members on such subjects as selection of stock, candling demonstrations, etc. He will also assist in securing first-class markets for the sale of the poultry and eggs.

"Each county club should hold an exhibition once a year, preferably in connection with the county fair, at which place a pair of the best chickens grown by each member should be placed on exhibition and entered to compete in the regular classes for premiums offered by the fair association, as well as for the special prizes offered for members of the Girls' Poultry Clubs. An exhibit of the best dozen of eggs should also be made.

"It would be well to have a president, one or more vice-presidents, and a secretary. A simple constitution and by-laws should be adopted. It will be found profitable to subdivide the county organization by townships, schools, or

school districts, and have local meetings at schoolhouses or at different girls' homes occasionally. Each club should adopt the following general regulations:

"1. Girls joining the club must be between 10 and 18 years of age on January 1 of any given year. Special classes may be organized for older girls.

"2. No girl shall be eligible to receive a prize unless she becomes a member of the club, and sets at least one setting of 15 eggs.

"3. Each member of the club must agree to study the instructions of the United States Department of Agriculture.

"4. Each girl must plan to do her own work and keep strict account of all expenses, such as feed, labor (for which 10 cents an hour should be charged), sale of stock, etc."

More particulars can be had, if desired, by addressing Harry M. Lamon, Poultry Investigations, Bureau of Animal Industry, United States Department of Agriculture, Washington, D. C. Here is a good work started, and we hope that all of Uncle Sam's girls will do all that they can to help. Start a Girls' Poultry Club in your home town, and try to get your county organized. If you want help in getting started ask Mr. Lamon for advice.

#### DR. WOODS' NOTES AND COMMENTS.

February gave us a taste of a little real old fashioned winter weather but it came too late to help the market egg situation. December, 1912, and January and February 1913 show egg prices very considerably lower than for the same months a year ago. Singularly enough, though, the weather was very mild, and increased production of eggs because of the warm weather is given as one of the causes of the low prices, a considerable number of northern flocks, with which we have been in touch, did not show as good an egg yield as they did in the severe winter weather of a year ago. No doubt some one will now rise up and explain.

\* \* \*

Some friends in the poultry supply business report excellent sales "largely owing to the mild open winter." Others in the same line of business claim that "the unseasonable weather and depression has made business less satisfactory than last season." You pay your money and take your choice 'twixt 'tis and 'tain't. We've enjoyed the spring-like winter and we hope it will be followed by a normal spring and not a cold backward one, such as followed the severe winter of 1911-12. But whatever comes, we're here ahead of it and might as well take it cheerfully. Whatever the weather may be, make the best of it and keep busy.

\* \* \*

Samuel J. Hooper, of Texas, reads the A. P. J. promptly, whatever else he does. He had read our February issue by February 6th and found time on that date to write us a 350 word letter on the subject of our comments in that issue. There is a lot of satisfaction in stirring up Mr. Hooper, he always responds to treatment. He is a candidate for election to membership in the Executive Board of the American Poultry Association and does not think that we interpreted his position correctly in re-

## WHITE ORPINGTONS

### An Established Strain with an Established Record

Write for catalogue giving list of winnings at Madison Square Garden, Chicago, Buffalo International, Cleveland, Allentown, Hagerstown and Pittsburgh. We have supplied hundreds of guaranteed winners and have started thousands of people in the chicken business with breeding stock at moderate prices, quality considered. We are now booking orders for winners for the fall and winter shows, in Single Comb as well as the new Rose Comb White Orpingtons, on payment of a small deposit.

#### We have improved the White Orpingtons and we can improve your flock

A few bargains left in yearling breeders. "Poultry for Profit" gives the essentials of the poultry business. Price 25 cents. It contains no advertising. Our advertising is free for the asking.

**LAWRENCE JACKSON FARM**  
BOX A, HAYSVILLE, ALLEGHENY CO., PENNA.

gard to open meetings of the Executive Board. He says:

"I contemplate some one offering an amendment to the constitution covering the 'open-ness' of Executive Board meetings and under such circumstances THERE MUST BE EXCEPTIONS. It is altogether POSSIBLE that a question might be brought before the board the nature of which would absolutely prohibit the hearing of it being public. My position takes from the president the right of saying whether the meeting shall be open or not and leaves it with the Executive Board. If the A. P. A. cannot trust a majority of the Executive Board to do what is right, then it is in a bad fix."

There you have Mr. Hooper's position in the matter. We are entirely willing to withhold comment until we have an opportunity to read the contemplated amendment. We are glad to know that Mr. Hooper reads American Poultry Journal with "pleasure." Meanwhile we are permitted to wonder just what rights, privileges, and benefits, the officers of the A. P. A. are willing to allow the "buck private" in the rear ranks of the Association. Of course we get an expurgated edition of the "Proceedings." but what else do we get?

\* \* \*

Opinions differ. It would be unfortunate if they did not. It takes differences of opinion and some discontent to make progress possible. What an uncomfortable world this would be if everybody liked and wanted the same things. What a dull world, if we had no differences of opinion and no discussions. If there was no discontent and everybody was comfortably contented with his lot, where would the

incentive to work for better things come from? Differences in opinion have helped to better conditions in poultry husbandry and will continue to help. We want every man with common-sense ideas for poultry progress to come out of the bush and be heard, even if he does differ from some of the old timers. If you have a good thing, don't hide it. Come out with it and try to help your brother workers. Never mind if they do sniff and say it is no good. Keep plugging away at the thing you believe to be right, boost it whenever you can, and if you are right and can deliver the goods, you will find plenty of others to follow where you lead.

\* \* \*

At the last Boston Show a poultry editor said to us: "You carry that fresh-air business too far, altogether too far."

Mayhap, but we don't believe it. We doubt any likelihood of its being carried too far. The further we carry open-air poultry keeping and open-air living the better we like the results. We don't believe that we are likely to carry it too far and think that the probability is that we won't carry it far enough. Too often the error is committed on the side of caution. The tendency is to go slow, to be cautious and to take no chances. This is all the more the case because it costs money to make experiments. We are spending our own money (not bequests, appropriations or endowments) and we have to make the dollars count and yield a return. An experimenter might be tempted to take chances where it did not effect his bread and butter, but he will calculate his chances in experimental work very closely when

losses mean depletion of the family funds. Open-air living, in such degree as business and other duties permit, brings better health for the whole family and the saving of the cost and time lost in sickness. Open-air housing and care of poultry means better fowls, better yield, freedom from serious ailments, better fertility, better chicks and better profits. We have a few experiments in view for the coming year that we hope will indicate just how far open-air poultry keeping can be carried with profit here in the North. We have a notion that the present open-air house is only a beginning. H. H. Stoddard has found that in Texas fowls with no houses whatever prove more productive and profitable than housed fowls, just how far the cost of housing here, where the winters are severe, can be lessened, remains to be proved. Our outdoor flock in the pines without a house proved remarkable producers last summer. It wasn't convenient to have an outdoor flock this winter and the weather proved so mild that it was just as well, but we have a plan in mind for another winter that is a bit more radical than out present open house, will cost less for housing if it proves successful, and we hope to raise a special flock of open-air chicks for the purpose of this try-out. At the same time we shall keep in mind the old saying: Don't throw away money, it's valuable.

\* \* \*

"Nail the window open," is the latest slogan of those who are working for better understanding and appreciation of fresh open air. For health and vigor get all the sunshine and fresh air possible both winter and summer,

# REGAL MATING LIST

Crusader III, a Boston Winner

For the season of 1913 I have mated up twenty beautiful exhibition matings. These are all headed by my winning males at Boston and the New York State Fair and contain all my exhibition females. My birds are up-to-date, the kind that are winning today. My score at the Boston show was 72 points which was 12 points more than the combined scores of my 21 competitors. Upon my show-record and the utility qualities of my birds I base my claim that Regal White Wyandottes are the best in the world. I have refused many large offers for my prize winners and they are all in my breeding pens. My customers will have an opportunity of obtaining eggs from these—the champion White Wyandotte matings of the year. Hundreds of my egg customers last Spring were winners in the shows this Winter. I quote the following which I have permission to use:

Decatur, Illinois, Jan. 9, 1913—Dear Sir:—This is to advise you that the cockerel and pullet out of the last setting of eggs you sent me just finished in first place at the Illinois Show at Springfield, the cockerel taking champion, color and shape special and the pullet taking color special in the hottest class of Whites ever shown at the state show; over two hundred entries I believe and all classy stuff. I guess I got my money's worth and you can rest assured when I need stock or eggs John S. Martin gets the business.—Carl M. Bailey.

Price of eggs from pens 1 to 20, (as they run), \$5 per 15, \$9 per 30, \$12 per 45, \$24 per 100. Pens 5 to 12 are special matings. Eggs from special matings only (as they run), \$10 per 15, \$18 per 30, \$25 per 45, \$50 per 100. **Record Laying Pens**—Dorcas Line. Pens 21 to 25 are headed by males bred from females with high records. Some of these males also have exhibition records. The females in the six pens are composed of yearlings with trap-nest records from 180 to 224 and pullets of the same breeding. From these pens eggs are \$5 per 15, \$15 per 50, \$27 per 100, \$50 per 200. Utility matings of vigorous surplus stock, \$5 per 50, \$9 per 100, \$17 per 200, \$25 per 300, \$75 per 1000. 500 cocks, hens, cockerels and pullets for sale. **Special**—50 big, vigorous, stay-white Dorcas line cks., \$10, \$15, \$20 and \$25 each. Dorcas pullets, \$5, \$8 and \$10 each. Utility cks., \$3 and \$5 each.

## Boston, 1913:

Cocks 1-6  
Hens 1-4-5  
Cockerels 1-3-4  
Pullets 1-3-4  
Pens 2-3-4

## N. Y. State Fair, 1912:

Cocks 1-2-3-5  
Hens 1-2-3-4  
Cockerels 1-2-3-4-5  
Pullets 1-2-4-5  
Pens (young) 1-2-3-4  
Pens (old) 1-3-4-5

Send four cents in stamps for the Regal White Wyandotte book, the finest book ever published, dealing wholly with the White Wyandotte. FREE—20-page illustrated catalogue and mating list. It gives full description of my matings for 1913.

JOHN S. MARTIN :- BOX 51 :- PORT DOVER, CANADA

night and day. Get fresh air and sunshine into the blood and every cell in the body will respond refreshed and invigorated. An abundance of food is desirable. Hydro-carbonaceous food largely for the young. More albuminous food for the matured adult. Moderate exercise is desirable; exercise to the point of fatigue is not. Common sense application of these "hints" will bene-

during the Boston Show. Mr. Whitney joined the association in Connecticut and shortly after removed to Massachusetts. The officers of the Branch would not accept Mr. Whitney as a member and would not recognize any authority in the Secretary of American Poultry Association to determine the procedure in such cases. Personally, we don't believe the question would have been

lived for a time in New York State, but until we heard of Mr. Whitney's case we assumed that we hold membership in the Massachusetts Branch. On this subject Secretary Campbell writes us as follows:

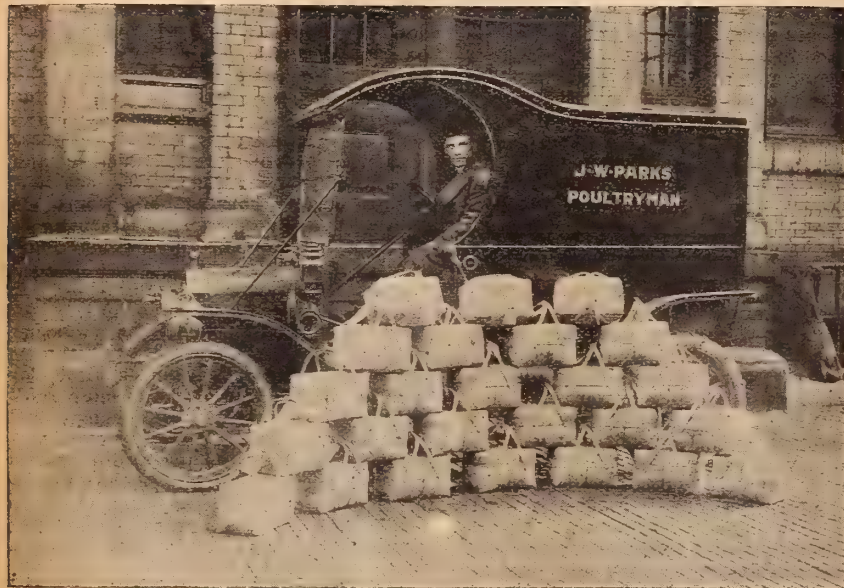

"Life membership in the American Poultry Association entitles members to the privileges of membership for life regardless of the place of residence. If you were to move to Australia, you would still be a member.

"We are informed that one of the A. P. A. members is of the opinion that a member must not be accepted by the Branch in whose territory he resides. A case was referred to the President of the A. P. A., Mr. Reese V. Hicks, of Topeka, Kansas, by the Election Commissioner of the Indiana Branch, as to whether or not all members residing in Indiana were entitled to vote. This included members that had removed to Indiana from other states. The President ruled that they were.

"The parent body votes on applications for membership. Therefore the parent body accepts or rejects the applicant. The branches through their representatives (the Presidents, who are members of the Executive Board) vote on all applications for membership. When an applicant has been elected he is entitled to all rights and benefits of the Association. So long as he is a member in good standing he cannot be denied these privileges until charges have been preferred against him and he has been found guilty of conduct unbecoming a member. He may then be suspended or expelled.

"You are a member of the Massachusetts Branch, becoming so without any action on the part of the Branch. All that is necessary for a member to do when he removes from one State Branch to another is to notify the Secretary and furnish him his former and present address. The Secretary makes the change on the records and the member is entitled to all rights of the Branch in which he claims his residence."

Clearly it is Secretary Campbell's opinion that Branch officers cannot rule a member of the A. P. A. out of membership in the Branch when he resides

#### THE POSSIBILITIES OF PARCEL POST

Are sure stamped upon the above photograph. When the new parcel post bill was put into effect the first of the year there was very few but what thought that it would be of any relief or advantage to the poultry industry, but when a breeder sends in a photo like the above of a single shipment to one customer, and at that over 4,000 miles away, consisting of 475 eggs, it sure looks as though one of the open links has been closed that puts the poultry industry one more to the good. Just think of the advantage to the many thousands of breeders that live on rural free delivery routes, some as far as 10 miles from the express office, that were kept out of the field alone by the great distance they would have to go for their eggs. The above shipment was made by J. W. Parks, the Bred to Lay Barred Plymouth Rock breeder at Altoona, Pa., on Feb. 10th, to a customer in Cowichan Station, B. C., Canada. Mr. Parks reports he has been very well impressed by the parcels post, and has issued a leaflet entitled "The Mail Route to Poultrydom," sent free.

fit yourself, your family and your flocks.

\* \* \*

In February number we referred to the case of C. W. Whitney, editor of Profitable Poultry of Boston, who was refused recognition as a member of the Massachusetts Branch of American Poultry Association at a meeting held

raised if it had not been for the fact that Mr. Whitney was understood to be an aspirant for office in the Branch. Nevertheless we have an interest in the matter as a decision against Mr. Whitney establishes a precedent that effects any other member who moves from one state to another. Since joining the A. P. A. in Massachusetts, we

## RUDY'S PERFECTION WHITE WYANDOTTES

SUPERIOR TO OTHERS THE ACME OF PERFECTION

### Eggs for Hatching

Get the best you can for your money. Don't buy eggs from questionable stock. They may be somewhat cheaper, but the outcome of the hatch will look the part.

Rudy's Perfection Wyandottes are known all over the country as the peer of the Wyandotte.

Get my mating list—free for the asking—and see the reasonable prices at which you can buy eggs from the Grandest Matings obtainable.

If you want to know all about breeding White Wyandottes, send for my Art Catalog. Absolutely the best book of its kind. Gives full information on how to succeed, how to take care of baby chicks, what to do when your fowls are sick. An article on how to fit birds for the show room is worth dollars to any breeder. Send 10c in stamps to help pay cost of mailing, etc.

Geo. H. Rudy, R. 15, Mattoon, Ill.

in the territory of the Branch. Yet that is what happened in Mr. Whitney's case last January, although at that time his address in the printed "Proceedings" of the A. P. A. for 1912, was given as Southboro, Mass., and it is apparent that, (if Secretary Campbell is right) he was a member of Massachusetts Branch without any action of the Branch and had been so recognized by the parent body. It would seem advisable for the Association to provide a law in such cases.

\* \* \*

Atlantic City is making a strong bid

There seems to be conflicting reports concerning the candidacy of E. E. Richards for office of president of the A. P. A. At the New York Show it was stated positively that Mr. Richards would not run. Since then we have been told on good authority that his friends will make a powerful effort to elect him. We have at present writing, no report from Iowa on this subject.

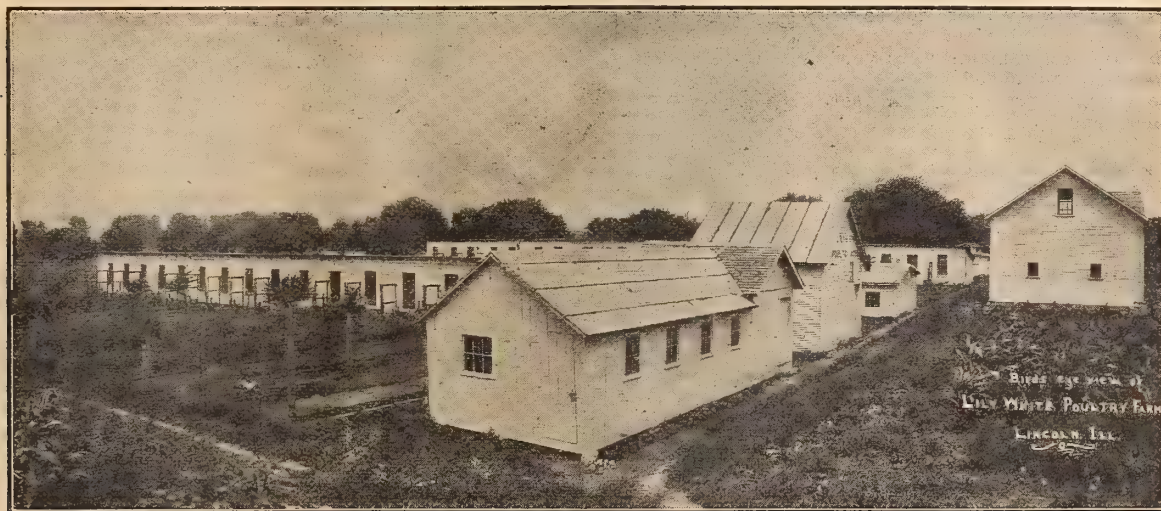

\* \* \*

The friends of E. B. Thompson, of Amenia, N. Y., are making a strong fight to land him as next president of the A. P. A. and personally we believe

the Board job go out of the family just at this time, even though the anti-Curtis faction claim that the family has had a sufficient helping of the Executive Board perquisites to last for some time, and it might be well to find someone outside the family.

\* \* \*

One of the latest aspirants for a place on the Executive Board is one of Mr. Curtis' department editors, our friendly dusty miller D. Lincoln Orr, Orrs Mills, N. Y. "Link" says he has only recently made up his mind that the members want him, but the paramount issue

Partial View of the Lily White Poultry Yards, Lincoln, Ill.

for the next meeting of the A. P. A. and there is no doubt that if it gets the convention there will be "something didding" every minute. Just think, though, what ten days or more in Atlantic City will do to a perfectly good bank account. We had rather take a chance in August on Chicago or Boston as a meeting place. Either city would undoubtedly allow more real comfort and a smaller expense account.

he would make a mighty good president. Mr. Thompson has had some thirty years or more experience as a fancier and breeder and he ranks among America's foremost progressive poultry fanciers.

\* \* \*

Our old friend "Will" Denny is looking for a chance to step into papa Curtis' shoes on the Executive Board. Of course it would be a shame to let

is that he wants a free trip to Frisco in 1915. Well, "Link" is a good fellow and a hustler. The A. P. A. might go much farther and fare worse. No one is likely to accuse Mr. Orr of being "a man of straw," he isn't built that way.

\* \* \*

Although there are other good men seeking the office we should be sorry to see Secretary S. T. Campbell lose in

FIRST PULLET AT TOPEKA, KANSAS, DEC. 1911

## KEELER'S WHITE WYANDOTTES

### The Aristocrats of the White Wyandotte World

They combine size, shape, style, head points and, above all, the power of reproduction, having been line and pedigree bred for the last nineteen years. They possess the best blood lines in existence.

### The World's Greatest Strain

Of the world's best breed. This strain has established more successful breeders than any other strain. This strain produces a larger per cent of high class birds than any other. Have produced the winners at America's leading shows for the past nineteen years, i. e., Chicago, Kansas City, Indianapolis, Cleveland, St. Louis World's Fair, New Orleans, Denver, Los Angeles, etc. The strain that you must have to be successful. Better buy them first as last. Start right by starting with Keeler birds.

### EGGS EGGS EGGS EGGS EGGS EGGS ETC.

For the season of 1913 I have made sixteen of the grandest matings that have ever graced Keelersville. They contain most of my prize winners at Topeka, Kansas, December, 1911-12, and the best birds raised the past three years. Sons and daughters of these great birds. They are bred right and mated right to produce the winners at America's largest and best shows next season the same as they have done in the past. My 60-page 1913 art catalogue of America's finest White Wyandottes, describing the sixteen best matings in America, free for the asking (stamps accepted). Eggs, \$5 per 15, \$9 per 30, \$14 per 50, \$25 per 100. Eggs from special matings, \$10, \$15 and \$20 per 15. 500 cocks, hens, cockerels and pullets in selected breeders at from \$15 to \$150 a pen. State your wants clearly and address, mentioning American Poultry Journal.

Keelersville, Chas. V. Keeler Proprietor R. 11, Winamac, Ind.  
and Mgr.

the coming election. In a position like that of secretary, experience counts. A good secretary can well be held in office as long as he is able to do the work in a satisfactory manner and if he is a good secretary his work should improve each year. We believe that Mr. Campbell is much more valuable to the association now than he has ever been and it would be a wise policy to return him to office. He has done good work and is capable of doing still better work.

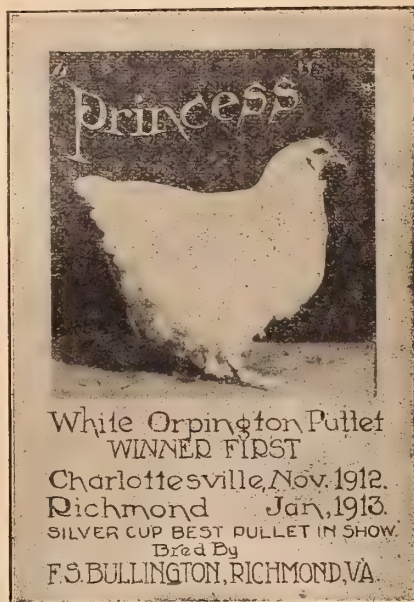

\* \* \*

E. J. W. Dietz, of Chicago, gave a talk on poultry advertising before the students in the poultry short course at Kingston, R. I., recently and was very well received. The students were very much interested and asked many questions, keeping the speaker on the floor for an hour and a half.

\* \* \*

E. B. Thompson writes us that he built a Woods' open-air poultry house in 1911 and liked it so well that he built an addition, making the house 120 feet long. It is well built on a concrete foundation and he says that it has many admirers as it makes a very attractive and practical house giving outdoor conditions with indoor protection. The floor is dirt, covered with straw. In this house there is a tight board partition every 20 ft. and a board and wire partition divides each 20 ft. section into pens 10 ft. wide. This gives a very satisfactory 12 pen house. The stud of this house is a little higher than that recommended in the plans published for the Woods' house as Mr. Thompson objects to taking a chance of head bumping on low roofs, and he tells us that in his new house a visitor

with a stove-pipe hat need have no fear. We'll wager that there are some mighty good "Ringlet" Barred Rocks in the house. The Woods' house is winning many friends. Please don't write to us for plans. They are given in sufficient detail in the book "Open-Air Poultry Houses for All Climates,"

which may be had of A. P. J. Chicago office.

\* \* \*

H. H. Stoddard in this issue answers the old question "Which was first, the hen or the egg?" Now you have the

answer, are you not surprised that you did not solve the old riddle yourself? Mr. Stoddard, by the way, is to tell us many things of interest that have been done on the Texas Experimental Farm of A. P. J. in coming issues of the Journal. A short time ago a certain gentleman took us to task for "letting" H. H. Stoddard say a certain thing in A. P. J. Bless us! We intend to let him tell the truth as he sees it. Stoddard's articles are carefully written and are carefully edited before they go to the printer. He has had more years of practical experience with poultry than any man we know of and he is a man of unusual mentality, with power to see into things, reason them out, get at the facts and teach what he learns. He has devoted a lifetime of study to poultry and is entitled to have an opportunity to "go on record" in such matters as he deems worth while. Mr. Stoddard is to tell our readers what he believes to be essential truths in poultry matters. It would be a queer world if different folks did not see things differently at times. Honest differences of opinion help us to get ahead and to see things more clearly. We try to edit A. P. J. in the best interests of its subscribers and readers and when H. H. Stoddard believes he has a helpful message for them, we intend to print it even if it does happen to squeeze the corns of the man with "an axe to grind."

#### A CORRECTION.

In our last issue of the Supplement we gave the Iowa Farms credit for winning first cockerel at Springfield. This should have read "cock" instead.

# Byers' Strain Orpingtons

## BUFF, BLACK, PEARL-WHITE

If you don't know of me and my responsibility, ask the Editor of this Journal. Then get my 1913 Catalog.

I have Won at the largest Shows past 14 years in Orpingtons; Have judged them from New York to Los Angeles; Bred them that Won yearly from Coast to Coast. EGGS from the best Special Matings possible \$10 per 15, \$18 per 30, \$50 per 100. (Infertiles replaced free.) Utility Eggs, \$15 per 100; \$60 in lots of 500.

Now, I will wager that Eggs purchased from my Special Matings at the above prices will produce more high-grade birds than Eggs purchased elsewhere at the same or a higher price—number of chicks reared considered. Moreover, I am going to guarantee to please every reasonable customer who purchases Eggs from me this season. I do not mean to infer that there are not other good birds in the country, but I do assert that the Eggs I WILL DELIVER at my price will produce more high-grade specimens than those purchased elsewhere, as above mentioned.

There are many choice birds in the yards of breeders, but the fellow who owns them without the knowledge of properly mating them handicaps himself, as well as his customer, although he may maintain and believe that he is right. I have gradually, by scientific experience and research, developed an exceptional and indispensable knowledge along this line. That's why I have been urged to place the Orpington awards at the largest Shows of our Country. But I am not in the judging business. My business is to breed one breed right and furnish Orpingtons and Eggs of the highest grade and at attractive values consistent with their blood lines and Standard qualities, and I have been doing it for 14 years, and I will be at your service in this capacity for years to come. In view of the above I am going to merit your patronage, if I get it.

# American Poultry Journal Experimental Station

Dr. Prince T. Woods, Director

## WANTED—AN EGG CASE.

AMERICAN POULTRY JOURNAL Experiment Station wants a strong, practical, serviceable market egg case. One that is "returnable" and will stand a good many trips without extensive repairs.

We have tried half a dozen makes of returnable cases and as many more sorts of the non-returnable kind. We have not yet found one that is really satisfactory and have found only one that is at all well built and durable. The nearest approach to a satisfactory returnable 30-dozen egg case we have found so far is Breck's New England

Egg Case. This is well made and built out of good material, but it lacks one inch of being deep enough. Also, it carries 300 square inches of advertising for the manufacturer on the ends, where the owner of the case should have his name and address.

Just why the maker of an egg case should use the cases for big display ads does not appear. Customers would complain if they found such advertising on other goods. With one exception every returnable case we have examined to date carries a big ad of the manufacturer on it in a space that the owner ought to be able to use. We want our egg cases free from manufacturers' advertising,

for if we are to use the cases to ship our own eggs, we want our own advertisement thereon.

Other cases which we have tried are not well made and are only about half nailed together. They are all scant in depth. Some are so badly put together that there are wide cracks where the boards match. In some, hard wood is used which cracks easily. In others the wood is too thin. Weak hinges and poor fastenings, insecurely put on are other faults. The hinges and fastenings ought to be put on with rivets and steel washers. In some cases they are simply nailed on and the nail clinched on the other side of the board. This comes loose in one or two trips and leaves the wood in need of repair.

Dealers and commission men request egg shippers to: "Have your name and address on the end of each case. Have packing on bottom and tops of cases." There is a reason for this. The name on ends of cases makes them easy of identification when empties are stacked in a store room and helps toward getting the cases back to the shipper. Packing on bottoms and tops of cases is necessary and helps to prevent breakage and loss. The tops and bottoms of egg cases are most liable to damaging blows.

Now the manufacturer makes it impossible for the shipper to get his name and address on the ends, because the maker has already appropriated this space with a big ad for himself. The case is not made deep enough to take packing on top and bottom and hold 30 dozen good sized eggs.

We want an egg case made of 5/8 in. clear white pine lumber. The inside measurements should be two compart-

## WOZELMA FARMS' EGGS — HATCH STRONG CHICKS THAT THRIVE —

### THINK THIS OVER.

Is not this a simply phenomenal record? Such eggs I am sending out to my customers in all parts of America at \$10.00 per 15, and guarantee eight strongly fertile eggs to each setting. Does this look good? Do you—you who are reading this—do you want to raise such Barred Plymouth Rocks? Then send \$2.50 per setting right now and have your order booked for delivery when you want to set the eggs. The balance you may send just before I ship the eggs to you.

W. D. HOLTERMAN, FANCIER : BOX A : FORT WAYNE, INDIANA

ments, each 12x12 inches and 13½ inches deep with a ½ pine partition between compartments. We want it made of soft white pine because this wood stands repeated trips better than harder woods. The ends of the case should be reinforced with straps or cleats at top and bottom to prevent ends splitting out. Top cleat should have a smooth hand hole. Case ought to be put together with cement coated nails which stick and don't pull out. There is a chance for improvement in fastenings. One of the best we have seen is the spring fastening known as "Atwood's patent" if it is put on with rivets and wide steel washers. It is not a lock fastening and it is useless when put on with nails only. We would prefer a lock fastening for top of case. Tops of cases should swing on hinges that are strong, well put on and permit the lid to swing freely and drop back to side of case. Some of them are flimsy and some of them bind in the hinge. The lids should be protected with thin inside cleats.

We will be glad to have information concerning a returnable 30 dozen egg case that will fill these requirements, or to have a sample case.

#### Tested and Found Good.

Following are listed a few things that are due for report this month and which have been tested at American Poultry Journal Experiment Station:

Just because anything is reported herein as good does not mean that there are not other similar things that are just as good. It simply means that we have tested the article and found it good after a sufficiently long trial to form an opinion of its merits. Don't ask us to endorse anything as best. We can only approve of it as good if it is good, and it will have to prove good on one of the A. P. J. experimental farms before we will report it as good. This department began in January, 1913, American Poultry Journal. Unless there is special reason for doing so we do not intend to report on the same article more than once, therefore keep your lists for reference. No favors are asked and none will be granted. Any poultry equipment, supplies, foods or remedies may be tested when opportunity offers. We do not promise published reports except when the articles are found sufficiently good to warrant recommendation in these columns, or

when sufficiently bad to warn poultrymen against them. We do not solicit articles for test or trial. Donated goods if sent freight or express prepaid to the Director of American Poultry Journal Experiment Station, Plympton, Mass., or by mail to Silver Lake, Mass., will receive the same careful consideration as goods purchased for test. That is all we promise and no concessions will be made to anyone on account of any favors.

#### Equipment.

Gasoline Engine. Root and Van Dervoort Engineering Co., East Moline, Ill. Rated horse power 7; r. p. m. 320. In use three months. A satisfactory engine for a farm or poultry plant. Develops more than rated horse power. Carries a full load easily and is economical to operate. Runs a grinding mill and mixer at same time and could easily carry green food cutter or grain cleaner on same shaft at same time.

Grinding Mill. No. 40 Stover Grind-er. The Stover Manufacturing Company, Freeport, Ill. Listed to run with 6 to 12 horse power; 7 h. p. engine named above carries it easily. Grinds with one set of plates quickly adjusted, corn on cob or any grain. Makes fine table meal, coarse flour, chick food, cracked corn, oat chop, barley meal or buckwheat flour. We have had satisfactory results in grinding for table use and for poultry.

Grinding Mill. No. 750 Enterprise Mill, Enterprise Manufacturing Company, Philadelphia, Pa. Hand power. In use one year. Will crack corn and grind chick food. Also will grind dry bone and oyster shells. Requires abundant "elbow grease," but is a good practical hand power mill. One set of burrs easily adjusted.

Tool Grinder. Pike Peerless Jr. Grind-er, Pike Manufacturing Company, Pike, N. H. A hand power, high speed grinding wheel for sharp tools, hatchets and axes. Convenient and practical.

Acme Tank Pump. A horizontal cylinder pump with hose equipment, Sears, Roebuck & Co., Chicago, Ill. Five-inch cylinder, 5-inch stroke, 2-inch intake and either 2 or 1-inch discharge. A practical low cost pump for poultry plant use.

Combination Bench Vise. Jos. Beck & Sons, Boston, Mass. Combines vise, drill, pipe vise and anvil. A very handy low cost practical outfit.

Power Feed Mixer. No. 3 Afton Farms Feed Mixer, Yardley Manufacturing Company, Yardley, Pa. Requires 2 to 3 horse power and runs at low speed. In use two months. Capacity about 300 pounds of grain at one mixing. A good low priced mixer. Would like to have one a little heavier built and more heavily stayed to stiffen it. This mixer sells at about one-fifth of the cost of the heavy dough mixers made for bakers and sometimes sold for poultrymen's use.

#### Condiments and Remedies.

French's Poultry Mustard. The R. T. French Company, Rochester, N. Y. One hundred pounds sent for test. In use three months. Trial not complete and more detailed report will be made later. Proportion used in mash: Began at one pound with 300 pounds of dry mash; test flocks now getting 2 pounds in 300 pounds of dry mash. It is apparently a good condiment for a conditioner and adds relish to mash. Appetite improved. Check in egg yield during first week of feeding. This was followed by gain in number of pullets coming into laying and gradual increase in daily yield. No apparent ill effects. Final report reserved until close of one year's use.

Germifuge. J. H. Petherbridge, Mt. Airy, Philadelphia, Pa. A non-poisonous ointment of eucalyptus, pine tar, camphor and peppermint prepared with petroleum jelly. One pound sent for test. Trials made on several plants. A good antiseptic dressing and healing application for parasitical troubles. Found useful in favus, sore head, white comb, scaly leg and depluming mites. Good for use on frozen and frosted combs. Also recommended for internal use in parasitic and germ diseases. No opportunity for test of internal use has presented itself to date.

Scaly Leg Ointment. Otto E. Hachman, 2332 Reynolds St., Fort Wayne, Ind. One ounce with formula sent for test. Effective in treatment of scaly leg.

Several other remedies have been received for trial, but no opportunity has presented itself to make a test of them. These, if found worthy, will be reported later. Manufacturers will oblige us and facilitate test if they will furnish general formula of their product when sending same for trial. This is not wanted for publication.

## Pardonner's S. C. R. I. Reds

Eggs for Hatching—My birds have won in strong competition this past season, winning with something to spare. If you want something with class that will prove winners next year, I can furnish them. Prices on eggs and show records will be mailed on application. Satisfaction guaranteed. Have a few cockerels to sell.

## FAIRVIEW WHITE ROCKS

Sweepstakes Champions at Chicago, Indianapolis, Louisville and Memphis, and Winners in the Louisville Evening Post Egg Laying Contest. Just Think of It! In eighteen shows in which they have been entered since 1908, in competition with birds from all our biggest breeders, shown either by their customers or by the breeders themselves, "Fairview" White Rocks won more firsts than all competitors combined. At the last Chicago Show, competing with Owen Farms and others, they won 1st and 3rd pen, 5th cockerel and 1st and Grand Championship on hen. This is the second time this season I have had Owen Farms as a competitor and each time "Fairview" White Rocks have held their own. If you want to know more about these phenomenal winners, send ten cents for beautiful illustrated catalogue. Mating list giving description of the finest lot of matings ever put together, free for the asking. Eggs \$3, \$5, \$10, \$15, \$20, \$25 and \$30 per 15. Order at once.

Conducted by H. H. Stoddard, Riviera, Texas

## STORRS' CONTEST AND SUNDRIES.

A PART OF THE REPORT of the Storrs Agricultural Experiment Station, jointly with the Philadelphia North American, made by Wm. F. Kirkpatrick, has appeared.

Poultrymen have eagerly awaited this delayed report. Naturally, after scanning the comparative rank of the leading breeds, one turns to methods of feeding which were as follows:

"All pens were fed and handled in the same general way. A well-known automatic feeder was used for the grain, and a simple dry mash receptacle was especially designed for the purpose. Mash, as well as grit, shell and charcoal, was kept continually before the birds, but it was necessary to close the grain feeder a part of the time, especially during the long days of summer. This daily attention to the hoppers would probably be unnecessary in larger flocks. Succulent food consisted of apples and Mangel Wurtzel beets for a short time in the early part of the winter, and of tender green cut corn for a little while in summer, when natural green food was not available in the yards. The principal succulent food was dried beet pulp which was fed separately; that is to say, it was not incorporated in the mash. The pulp was soaked in water (usually warm) for about an hour just prior to being fed,

which process increased its weight from four to five times; it consisted, when dry, of approximately 8 per cent of the mash, by weight. In may be added in this connection that the beet pulp can be economically stored, and may be kept more or less indefinitely, and in consequence was very convenient. We cannot, at this time, present any really experimental evidence of its value, but can say that it seemed entirely satisfactory. It is, of course, not claimed that these formulas are the best, but it is thought that the egg records already submitted will substantiate the belief that the following rations have given excellent results:

### Dry Mash.

	Pounds
Coarse wheat bran .....	200
Corn meal .....	100
Gluten feed .....	100
Ground oats .....	100
Standard middlings .....	75
Fish scrap .....	30
Beef scrap .....	30
Low-grade flour .....	25

### Scratch Grain.

	Pounds
Cracked corn .....	60
Wheat .....	60
Heavy white oats .....	40
Barley .....	20
Kafir corn .....	10
Buckwheat .....	10
Coarse beef scrap .....	10

Wm. F. Kirkpatrick.

## Horror of Corn.

It is to laugh at the horror of corn manifested by the authors of this feed list. The mash "kept constantly before the birds" had only 100 pounds of corn against 560 pounds of bran, middlings, etc. And when we turn to the scratch grain, dispensed by machinery, we find that the cracked corn, reinforced by the Kafir corn (much like it in carbonaceous content), is only 70 pounds, against 140 pounds of other things. Worse and more of it, in order to get at the corn, birds had to scatter, and either eat or waste, a quantity of essentially the same elements which they had before them all the time profusely in the mash! To make matters still worse, the supply of corn and other grains was "turned off" part of the time!

What sort of a balanced ration do you call that, anyhow? Had whole corn or corn meal been before them all the time, and kept separate, everybody who understands fowl nature knows that they would have eaten a much greater quantity of carbonaceous stuff than they were allowed to at Storrs.

The theory of the ration-makers plainly was that fowls know enough to eat all the proteineous elements they need, and then stop, but cannot be trusted to eat all the carbonaceous matter they need, and then stop. That though the feeding grounds of innumerable species of wild birds supply them with food partly or highly proteineous, and also

**EGG PRODUCERS—If you want eggs buy Fishel's White Ply. Rocks**

# BABY CHICKS

From strictly free range stock hatched by the latest improved scientific methods, backed by years of experience with incubators, from the following varieties: S. C. White Leghorns, Buff Leghorns, S. C. Anconas, White Plymouth Rocks, Barred Rocks, White Orpingtons, Black Orpingtons, Black Minorcas, S. C. R. I. Reds, White Wyandottes. Remember we have the largest equipped poultry plant in the middle west. Can supply chicks in any quantities guaranteeing safe arrival. Send stamp for catalogue describing how we feed and raise thousands of chicks. All orders booked in rotation.

**Miami Poultry Yards, Jas. C. Cummins, Mgr., R. 2, Trenton, Ohio**

A WONDERFUL WINNING AT CHICAGO 912

## R. AND S. C. BLACK MINORCAS AND R. C. BROWN LEGHORNS

Six firsts, seven seconds, three thirds, one fourth and three fifths. We are offering 1,000 breeders and show birds from the above winners, birds that are showing wonderful type, color and vitality. No matter what you are wanting in the above we have it. Remember when you order from us you

are getting birds from the largest breeders of these three varieties in the world. Our forty breeding pens are now mated, containing all of our winners, and we can supply EGGS and DAY-OLD chicks in any number. We have a special proposition that we will be glad to offer every honest person interested in poultry, and in buying from us all the cash is not necessary. Mating list free. Our big catalogue and poultry book will be mailed for five red stamps. Mention American Poultry Journal.

**Edgemont Poultry Farm, W. O. Chase, Box, B Hillsboro, Illinois**

other food partly or highly carbonaceous, and they know how to select for themselves, yet domestic birds do not know. Some wild flesh-eating birds eat other birds, or fish, or quadrupeds, containing masses—yea, "great gobs"—of fat. We never knew them to be made sick or unthrifty thereby. Some of the seeds eaten by various birds and quadrupeds are exceedingly oily. Guess these animals hunt for some other food when they have eaten enough such stuff. Or, reader, now, candidly, do you think they need a boss?

"But our fowls are domesticated," some one may say. To which the reply is that though, for instance, domestication, by causing disuse of the wings, might naturally modify these organs, as Darwin says, and so in regard to other comparatively non-essential things, what reason under the sun can be conceived why the extremely important faculty of selecting food should be changed? Why, it would seem that the ability to choose the proper kind of food was a very fundamental necessity for any animal, and one of the last to be dropped, or even modified very much. Had not nature furnished a guide, animals, wild or tame, and we ourselves, would be everlastingly eating injurious or, at any rate, unsuitable things.

#### No Plant Is So Lowly.

A bird, with its wonderful organization and many surprising faculties, is immeasurably higher in the scale of living things than anything in the vegetable kingdom; yet no plant is so lowly that it cannot select its food from a soil where many substances are mingled. The ability of an animal to discriminate regarding the kinds of food is no more wonderful than the demand for food itself—in other words, the sensation of hunger—which arises and then again subsides as directed by nerve vibrations as marvelous as the movements of planets and suns.

What an anomaly and how suicidal a process that would be which should telegraph from the digestive organs that something was needed down there, but could not tell what in thunder it was!

If my position is correct, then it may be asked how so many poultry writers could be mistaken so many years. Well, the majority is always wrong for a long time—sometimes for hundreds of years and sometimes for thousands; then a few get over on the other side,

and after a while nearly all join them. For sixty years, maybe, or more, a great country, in the highest state of civilization ever known, its form of government and everything else considered, and a country especially prominent in industrial inventions, carted coal to the consumer, the driver "hollered whoa!" and proceeded to shovel it into baskets, to be carried to a cellar by main strength and awkwardness! Millions of tons of it. Thousands of people in big cities have looked on! Why under the sun, moon and stars was it not sooner discovered that a simple contrivance attached to the vehicle would deliver the coal by gravity, while the driver smoked the pipe of peace and contentment?

Such a state of affairs is simply astonishing. All those years, inventions were going on—so marvelous, some of them, that they were previously past imagination; and yet millions of people have apathetically witnessed that waste on a large scale of time and human muscle.

#### Made Fools of Ourselves.

It is just that way over and over again. Our crowd have made fools of ourselves many a year on various poultry matters, before getting our eyes open. We might be more ashamed of ourselves than we are, were there not an innumerable number of fellow-citizens in other fields who were behaving just as badly.

Keep in mind that the poultry business in all its branches is in its infancy. A lusty, bouncing infant, for sure, but very young.

\* \* \*

In addition to labor saving by means of locating where soil and climate are favorable, and markets are near, and also where natural resources, like never-failing running water or ponds, are available, and by a proper fundamental plan being adopted, and every possible good mechanical contrivance used, a very great labor saving can be made by simply operating on a large scale.

If there is a great deal of a particular kind of work to be done, many methods and fixtures can be employed that would be out of the question in small establishments, and on top of all the rest, supplies can be bought by the carload and poultry products sold at a corresponding advantage.

For an illustration, take the matter of green fodder. It is only very re-

cently that it has been the widely accepted doctrine that birds, young and old, should have a large—and a very large—quantity of greens.

It has for a long time been recognized that geese are strictly grazing animals, like horses or cattle, as may be seen here, where large flocks of wild geese leave the water and spread out to feed on the grass of the cattle ranches, which springs up fresh and tender in response to winter rains—a reminder to them of their summer home in what is now the frozen north. But it has not been sufficiently recognized to what an extent hens are grazing animals, too, and that if greens of tempting kinds are supplied, they will make them one of the main sources of their living, instead of a mere relish or for the medical purpose of preventing scurvy, or, if not really scurvy, at least a partly scorbutic condition.

So important is green food that when an attractive sort is offered them, like rape or beets, and all they will eat, the grain consumed is diminished almost one-half, apparently, though careful statistics on this point would be worth much. Every important matter, like this, should be officially brought right down to figures.

Anyway, in California one man who has 4,000 layers, and a corresponding number of immature birds, has fifteen acres out of his twenty-five acres in kale.

Now I come to the labor-saving part.

In case the green stuff is harvested, carted, cut finely, and then fed, there will be considerable work about it at the best, and there may be even more work than in supplying all the other kinds of food put together. The best way is to dodge labor by using fields fenced with poultry netting, raising your crop to the correct age of good size, combined with tenderness, then turning birds therein. I said the best way, but meant the best way if circumstances allow. Sometimes greens must be cut for both young and old, owing to lack of room for rotating from one field to another, and in any event there should be quite a large quantity handled for chicks not old enough to pluck it for themselves to full advantage.

There is nothing that better shows the economy of operating on a large scale, than handling green stuff.

And sometimes cases alter circum-

## "TWO OF A KIND"

TWO

OPEN AIR HOVERS

Nature AND Close-to-Nature

Bird life demands open air—Close-To-Nature Brooders give it. Contact warmth like the old hen—plenty fresh air—no overcrowding. Give chicks these three things and raise every chick in flocks of 100 to 300. It is natural for chicks to get their warmth by coming in contact with a warm body. Habit and heredity for several thousand years have made this the case. But hot air or furnace is not natural. It dries out, weakens and kills. Chicks in Close-To-Nature Brooders nestle their backs against a warm body that perfectly stimulates the broody hen. The Close-To-Nature Brooders have a very long, narrow hover which allows large flocks with no congestion. Such hovers are not possible except with contact heat. For raising chicks in cold weather, the Close-To-Nature Brooders and Hovers excel. Send for free catalogue.

CLOSE-TO NATURE COMPANY : 38 FRONT STREET : COLFAX, IOWA

stances. A neighbor converted to the idea of feeding greens liberally to yarded layers and small chicks, has so few birds that he cuts rape near the ground with his pocket knife. It soon springs up again, fresh and tender, ready for another cutting. He keeps it straight, butts together, and makes up a bunch which when clasped firmly together with his left hand is a little smaller than his wrist, and with keen knife in his right hand cuts across the bunch making very small shreds for chicks just hatched, and coarser and coarser for older ones, till the laying birds are reached, who are content with bits the size of kernels of corn. This is a very good way when there are but few birds.

Next let us imagine our friend's flock the coming year, when it will be larger. The pocket knife no longer but a corn knife with straight blade fifteen inches long. This for cutting the rape in the field, whether in drills or in broadcast, to be taken away in wheel-barrow and then chopped on block or plank using the same corn knife.

A larger flock still, and a scythe and rake are substituted in the field, and a wheelbarrow on the hay-rack principle to hold a huge load, or perhaps a one-horse wagon, conveys the crop to a regular cutting machine operated by the owner's good right arm.

The time comes when a mowing machine cuts the crop and a horse rake gathers it in wind rows and piles, it is loaded at the rate of a ton or more on a specially contrived wagon, its upper work made for a convenient delivery to a large cutting machine run by an engine. The cutter is a self-feeded, and has an endless carrier which drops the cut-stuff into a wagon which takes liberal allowances of vegetables, living cells to all the flocks.

#### The Labor Saving.

The labor saving on green stuff the large establishment makes, as compared with the small one, is perhaps fifty to one, or maybe as one hundred or more to one.

If the pasturage plan is followed, then the larger the ranch the larger and more effective the equipment for plowing and seeding, and if the crop is in drills, for cultivating too, either by mule power or traction engine.

Movable fences, of the best, can be adopted to shrink or enlarge the pastures as needed, and sometimes, when the growth gets ahead of the birds, cutting by auto power can be resorted to, thus keeping the crop from becoming rank and tough. And, by the way, the best thing to hold movable fences in place is a row of corn well fertilized and tended so that the stalks may be tall and sturdy. Attach your poultry fence to these and you will need no posts. Simply shift your wire fence to another row a few rods away when you need more pasture. No posts to move.

As the slandered, and cursed sitting hen becomes more esteemed, attempts to produce a race of steadfast, gentle sitters and brooding birds will be made. Desirable dispositions will prove to be inherited more surely than laying qualities, unless indeed the labor lately spent on endeavors to get a 200 egg strain meets a final reward proportionate to its cost, which down to date appears dubious. A sitter perfectly behaved in every respect, is a jewel rare.

In time, by rigid selection an entirely new breed may perhaps be produced. The simple expedient of always keep-

ing the hens with chicks in competition with each other as regards motherly qualities, and at weaning time putting the winners in a special flock of "extra selects" to use as breeding stock, may be expected to accomplish much in a few generations toward producing a strain of great value. The dictum of Darwin and Wallace that "like produces like or the likeness of some ancestor" holds good; or how could any species, variety, race or breed, after once evolved, be maintained in purity for long periods? Again, how, without the law of reversion, could a new species or even a new sub-species or a new breed be evolved? And how could there be any reversion without something existing to revert to, and what did that come from, for from nothing comes nothing.

Everything under heaven that is alive, be it in the animal or the vegetable kingdom, embracing even the realms of consciousness, or mind, or thought, will, desire, imagination, or action, proceeds from two factors and only two that have ever been proved, namely: heredity and environment. But how did either of these become established and when? Just here we reach the limit of knowledge or the very last analysis; and this suggests the old query, "Which was the first, the bird or the egg?" The correct answer being neither, for both descended at the same time from that which was not either egg or bird, but an earlier stage.

The prevalent guess now-a-days is, that the simplest life forms spring from chemical forces or reactions, or from some factors back of what are called chemical and perhaps are so elusive and subtle that man has no faculties wherewith to discover them and so will never know anything about them except by the uncertain light of analogy.

\* \* \*

In Bulletin 205, Nov. 1912, of Maine Agricultural Experiment Station, we are told, page 284, that: "The record of egg production or fecundity of a hen is not of itself a criterion of any value whatsoever from which to predict the probable egg production of her female progeny. An analysis of the records of production of large numbers of birds shows beyond any possibility of a doubt that in general there is no correlation between the egg production of individuals and either their ancestors or their progeny."

The qualification, "in general" opens a door that is pretty wide; for on page 379 we are first told that "High fecundity may be inherited by daughters from their sire independent of the dam," but a little further down the page are informed that, "a low degree of fecundity may be inherited by the daughters from either sire or dam or both," which explains why "generally" was inserted on page 284. Lo and behold, poultry breeders who all over the world are lately wrestling with the 200 egg problem, are told that the trait of prolific laying is never bestowed upon pullets by their mother, but that the poor laying trait may be given them by their mother!

The cock always carries a particular and unalterable rate of laying which he always impresses on his daughters, Professor Pearl says, their mother having nothing to do with it, and we are further instructed that his daughters are endowed with his rate, whether he

mates with hens of high or medium or low fecundity.

Now mate the hen of low fecundity to some male. He must of necessity carry either the same, or lower or higher fecundity than hers. And now how are you going to prove that the hen bestows low fecundity under above conditions, for if his inate fecundity is high or medium, then according to Professor Pearl, the daughters will be as high as he, and the dam has not bestowed low fecundity. It is his work.

If, on the other hand, his inate fecundity is as low or lower than hers and the daughters of the mating prove to be of low fecundity, how can Professor Pearl prove that she was the one who bestowed this quality? How does he know that it was not the sire's work? The presumption would naturally be that the low laying quality came from him, since the Professor asserts that all high-laying comes from the sire. The reader is referred to pages 304-5 of the Bulletin and can then decide, if he studies hard enough, whether or no Professor Pearl, with his "factors" has made good. The important, if true, part of his conclusions will be put to actual test in many private poultry yards and at Stations. Proof of the pudding, etc. Or you may decide that by the rules of ordinary reasoning; you can tell whether he has made good without any actual test.

# The Charlotte, N. C., Poultry Show

One of the Best and Largest Held Annually in the South—17th Exhibition *By H. P. Schwab*

IT WAS with pleasure that we headed for the South to judge at the Charlotte, N. C., show, the oldest poultry association in the South, this being their seventeenth annual exhibit. We had been there before and in the past had worked at four others and well knew the breeders and what to expect on arrival. The Barred Rock Club was to hold their annual meeting there, and in passing through Philadelphia Mr. Henry D. Riley came aboard and we traveled together for the sunny land of promise with pleasure assured in meeting many well known breeders.

Charlotte has a beautiful city building for such exhibits. The show was on with all arrangements complete, and on Friday night Mayor C. A. Bland formally opened the exhibit with an address of welcome while the ladies served. Mr. Henry D. Riley responded to his honor in behalf of the visiting poultrymen.

The show was opened with great classes in the more popular varieties, and quality that was good to see. A great list of prizes was to be competed for, with all filled with expectations and hope.

The great class of Barred Rocks were a credit to the breeders and it took the very best grade to win. Mr. M. B. Hickson, Lynchburg, Va., proved the leading winner here, winning as follows: Cock, 1st and 3d; hen, 1st, 2d, 3d and 5th; cockerel, 1st; pullet, 2d, 4th and 8th; pen, 2d; cockerel bred

hen, 1st; pullet bred cockerel, 3d; special for best male in show on his first cockerel; also color special male. This was a fine win in a beauty class.

Mr. R. N. Moore, of South Carolina, was another good winner. His first prize pullet was one of the best we have seen out this year; his winning pen up to all expectations.

White Rocks were a dandy class and as a rule well shown.

Buff Rocks were one of the best classes seen, very large and very strong. Buffs have always been a royal favorite here. Our old time friend, Mr. W. B. Alexander, is still at it and showed many nice birds.

White Wyandottes were strong in numbers and of good grade as a rule. Many real fine specimens were shown.

Partridge Wyandottes were one of the best classes seen. The competition was of the best, type and wonderful color and markings were the rule. Mr. Harrell was a strong winner in this class and won in specials a wagon load of goods, and cash enough to buy a farm.

With Mr. Percy Cook as judge of the Orpingtons, as was expected, a great class was out. Buffs were numerous and very strong. Whites a great class and birds well shown. Blacks a royal class of quality. Some wonderful birds were seen in this.

Mr. Cook made a display of his White, Buff and Black Orpingtons that were the center of attraction. We took

the liberty of handling these and were delighted with their quality and condition. Mr. Cook surely understands this breed. His work gave the very best of satisfaction. He has the Orpington interest at heart and is giving his best efforts to make and keep them a most reliable and valuable breed for fancy and practical purposes.

Leghorns are also a favorite in the South and we have always found them among the great classes here. This year was no exception and in the Whites and Browns large and valuable classes were seen. Birds shown in excellent condition was the rule.

Black Langshans were a surprisingly fine class. This climate seems particularly well adapted to them. They are a good and reliable variety and should be bred to a larger extent.

At the American Barred Plymouth Rock Club meeting the following officers were elected for the coming year: President, H. P. Schwab; vice-presidents, Messrs. E. B. Thompson, A. C. Smith, Victor Bradley, C. H. Latham, C. E. Spangh, R. L. Simmons, Matt W. Baldwin; executive committee, Messrs. Charles H. Welles, S. T. Divinia, A. C. Hawkins, Wm. Ellery Bright, H. M. Kenner, Amos Vogt, Jas. T. Huston; secretary and treasurer, Mr. Henry D. Riley, Strafford, Pa. The meeting was a very enthusiastic affair. Many breeders from the South have lately joined the club. It was voted to issue a club catalogue and this with further particulars will be given shortly.

The association banquet at the Selwyn Hotel on Saturday night was a joyous affair, long to be remembered. Mr. E. B. Moore, the president of the association, presided and made a royal toastmaster. His opening and closing

SPECIALTY BREEDERS OF S. C. W. LEGHORNS

Make the greatest wins of the age at the Grand Central Palace, New York, Boston and Hagerstown, Md., shows, in competition with fifty other exhibitors we won:

### At the Great Hagerstown Fair, October, 1912

Cocks, 1 and 4; Hens, 1; Cockerels, 2, 3 and 5; Pullets, 1, 2 and 3; Pens, Old, 1; Pens, Young, 1; Specials for Best Leghorn Male and special for best bird in the Mediterranean classes and best display.

### At Grand Central Palace, New York, December, 1912

Cocks, 1, 2, 3, 4, 6 and 7; Hens, 1, 2, 3, 4, 5, 6; Cockerels, 1, 2, 3, 4, 5; Pullets, 1, 2, 3, 5, 6, 7; Pens, 2, 3, 4; Specials for best head Male and Female, best color Male and Female, best shape Female, best display, and Gold Special for best display of any variety in the show.

### At the Boston Show, Boston, Mass., January, 1913

Cocks, 1, 2; Hens, 1, 3, 6; Cockerels, 1, 2, 3, 4; Pullets, 1, 3, 6; Pen, 3; Specials for best Display, best Male, best Female, best color Male and Female, best shape Male and Female, best head Male and Female, and Special for best bird in the Mediterranean classes.

These three wonderful wins, combined with our victories at Palace, New York, Boston and Philadelphia shows, in 1910 and 1911, of twenty-two firsts, thirteen seconds, seventeen thirds, ten fourths, nine fifths, eighteen silver cups and two championship medals, surely proves that we lead in S. C. White Leghorns.

We are now booking orders for hatching eggs at 60 cents each from our best pens; 35 cents and 20 cents each, or, \$15.00 per 100 from other good matings. Send for catalog and kindly mention A. P. J.

Dune Alpin Poultry Farm, Geo. J. Kerr, Mgr., Box 651, East Hampton, N. Y.

# A Million Dollars Buried

## Every Year

"Dead in the shell chicks and White Diarrhoea, cost the Poultrymen of this Country a Million dollars every year." Every Poultryman knows this to be true, and that every dollar of this sum comes out of the pockets of the Poultrymen. How much of this sum do you, Mr. Reader, contribute, and how much longer will you continue to bury your Profits? There is a way to stop these losses, and if you are fair to yourself and your business it is time for you to act. It costs you nothing to prove this statement to your entire satisfaction. The remedy is one that science sends you, the

## Ajax Improved Oxygen Vitalizer

TESTIMONIAL EXTRACTS.  
"307 chicks from 307 fertile eggs."  
Mrs. F. J. Russell,  
Summerdale, N. Y.  
Sworn to July 12th, 1912.

"Your Oxygen Vitalizer is a POSITIVE PREVENTIVE for dead in the shell chicks and WHITE DIARRHOEA. It SAVED me \$126.80 in one season."

Mary D. Newcomb,  
Berwyn, Pa.

"The Vitalizer does ALL that you claim for it. No poultryman can AFFORD to be without it."

Levi D. Yoder,  
Dublin, Pa.

"EVERY egg a CHICK. It's worth MILLIONS to the Poultry Industry."  
Ora Overholser,  
Eaton, Ohio.

"Same old story for 1913, not a SINGLE dead in the shell in the WHOLE hatch."

Ira N. DeLine,  
Olympia, Wash.

"You have SOLVED THE PROBLEM of chicks dying in the shell. The finest youngsters I EVER SAW."

Ernest L. Shipley,  
Mt. Airy, Md.

"The Vitalizer gave me a BIG lusty chick, from EVERY fertile EGG, and not a CRIPPLE in the whole lot, and NOT a SINGLE CASE of White Diarrhoea."

Fred Minch,  
Hicksville, L. I.

"Not a single case of White Diarrhoea. Am so well pleased, I would NEVER THINK of running my incubator without the Oxygen Vitalizer."

Mrs. C. A. Ash,  
Litchfield, Mich.

"76 chicks from 76 fertile eggs. Never saw anything to equal the Vitalizer."

M. W. Maybach,  
Silver Springs, N. Y.

## BULLETIN

N. Y. State College of Agriculture.

"Oxygen is essential to normal development, the amount required increasing with the growth of the embryo. The eggs give off carbon dioxide and this increases as the embryo grows."

In a Bulletin, which treats of "Artificial Incubation," the New York State College of Agriculture says, "the eggs give off Carbon Dioxide, the amount increasing with the growth of the chick." That means simply this, that during the last three or four days of Incubation the egg chamber of the Incubator becomes filled with Carbon Dioxide, or Carbonic Acid Gas. This is a Poisonous Gas. When inhaled in sufficient quantities, it produces Death. Just as true as that twice two are four, "Dead in the Shell" chicks are the direct result of Carbon Dioxide Poisoning. This same authority says "Oxygen is essential." What for? Because, Oxygen is the one and only thing that is known to science that will overcome the effects of this poison, and bring out a big strong chick from every hatchable egg just as Nature intended. Thus it is that the Ajax Improved Oxygen Vitalizer, by supplying the life giving Oxygen to the egg chamber of the Incubator, just at the time when the deadly poison is getting in its work, puts a stop to the Dead in the Shell chicks, and at the same time, puts a stop to dreaded White Diarrhoea. So positive is the proof of this fact, that we positively guarantee the Oxygen Vitalizer to do this, and if it fails it costs you nothing, your money is cheerfully refunded. No "dark corners." No questions. No haggling. Just plain, every day, common honesty, your money back. In support of our statement, we print on this page sworn proof of its truthfulness. We have scores of such letters, and they are yours for the asking, together with our Oxygen booklet, free. The Vitalizer costs \$3.50 complete, ready for use, and delivered to you anywhere in the United States, charges prepaid. It can be attached to any Incubator in two minutes, and lasts a lifetime. Very simple in operation. Full instructions and our officially signed and printed "Money Back" Guarantee packed with every Vitalizer that leaves the factory. If you have the least doubt as to the strength or scope of our Guarantee, you may write one for yourself and make it just as strong as you want to. Send it along with your remittance and we will sign it and return to you with the Vitalizer. The Vitalizer pays for itself every time that it is used and more. The hatching season is here. We have told you just what your own good judgment will tell you if you will only think. Don't keep on burying your profits. Send your order today and prove for yourself the truth of what we have said. Remember it costs you nothing to see for yourself, and that every hatch that you miss means money lost. Do it now, so that you may be ready for that first hatch.

SPECIAL NOTICE.—To one real live Poultryman in every town in the United States we will, during the next thirty days only, make a most exceptional offer. First come, first served. Don't overlook this, because it means money to some one. Write now.

**Reliable Poultry Specialty Co.**  
Main St. : Alexander, New York

addresses were masterpieces and highly appreciated by all. Speeches were made by Percy Cook, Loring Brown, R. L. Simmons, S. H. Hackney, C. W. Best, Mr. Kerr and yours truly. Mr. Brown spoke feelingly and with special interest to the poultry conditions of the South and the progress made. His effort is sure to be of value to all hearing it. Mr. Cook proved also a most interesting speaker. His talk was very instructive, and by request he answered several questions. His long and wide experience along with the success he has made places a value on his expressions.

It was with regret we said adieu to our friends in Charlotte, but we had other shows to make and our two days there were altogether too short to suit our personal inclinations. We are going back there some day to again visit the breeders when we can stay long enough to visit them properly and to better study their conditions and the really wonderful progress the breeders of that wonderful section are making. They have the climate and favorable conditions there, and in poultry their best success should be assured.

## OKE'S HAMBURG & BANTAMS WIN

"The world over"—Boston, New York, Baltimore, Toronto, all great shows. Golden and Silver Penciled and Spangled and Black Hamburgs, Seabright, Black and White Rose Comb and Jap Bantams. Eggs \$5 per setting. Write your wants.

R. OKE. BOX 361-A, LONDON, ONT.

## The Cleveland, Ohio, Poultry Show

A Popular Show with Wonderful Attendance—The Display Large and Complete  
By H. P. Schwab

CLEVELAND year after year has proven itself a standard to follow. Their shows have all been models in management and in cleanliness and in arrangement. With Secretary Conkey and Eugene Sites, ably assisted by his brother Frank, the show is put on and is run in a way to call for the highest praise from all who have attended it.

Large and strong classes of poultry were the conspicuous features this year. In Plymouth Rocks, Reds, Wyandottes, Orpingtons and Leghorns, etc., there were strong classes of merit worth seeing.

The attendance is an assured Cleveland feature and every year here the people flock in and fill the great Central Armory to the doors, to the delight of the exhibitors looking for sales and business.

The Barred Rock class this year was one of unusual merit and in all classes were many desirable birds. Mr. D. M. Covert, Willoughby, O., comes here year after year with his Barred Rocks and cops many of the valuable prizes. This year he won: Cock, 1st; hen, 5th; cockerel, 3d; pullet, 2d; cockerel-bred female, 1st; pullet-bred cockerel, 1st; pullet mating pen, 1st, and several specials. Mr. Covert's line is well

known and he has shown them with much success here, at Buffalo, N. Y., and at the great Philadelphia show. His winning cock was just right and in the best of condition. He is a noble fellow with every quality.

Mr. Henry D. Riley, Strafford, Pa., after his good win of last year came back for more honors and got them in winning cock, 2d; hen, 1st and 2d; cockerel, 1st and 2d; pullet, 1st and 3d; and pen, 1st. This line has proven itself one of the leaders by its winning here and at Madison Square Garden, New York. This year Mr. Riley has made another record of which he has every reason to feel very proud. We have seen the records and reports of about a dozen breeders who last spring bought eggs from him and told of the winnings made with these birds at several of our largest shows, East and West and in the South. He has taken years of time to bring his line to this standard, has worked faithfully and now well deserves the credit due.

Mr. C. F. Webster's Great Win.

In White Plymouth Rocks the Webster Farm, Girard, Pa., made the most sensational win on record. This line has done well for several years at many strong shows, but have never made the win they made here. Their winnings

CARVER'S RED FARM, SEVILLE, OHIO, See Ad On Next To Last Page

# WHITE ORPINGTONS

## Superb Type and Superior Quality

MY FIRST SHOW, 1912  
TEXAS STATE FAIR

1st, 2d and 4th Cock  
1st, 2d and 5th Hen  
1st, 2d and 3d Cockerel  
1st, 2d, 3d and 4th Pullet

Won at St. Louis, 4 Cock; 2 Cockerel; 1, 2, 4 Hen; 1, 4 Pullet; 1 Pen; and Several Specials.

My birds are absolutely white, of that deep-bodied type, low down on legs, up to weight, and I know that I can please you.

The last time I showed at Madison Square Garden, 1911, I

again controlled the winning male birds. My winnings include first cock, third hen, fifth pen and the cockerel heading the first pen. The winning cock is, without doubt, the greatest White Orpington in the world, having defeated the Crystal Palace champion and all the great cocks of America. These great birds, together with my other prize winners, place Russell Cave White Orpingtons far in the lead. Both in Allentown and Augusta, two shows I made last year, I won at each the cup to that exhibitor whose ten or more birds of one variety showed the highest degree of excellence and uniformity of type and breeding. This record of winning in two of the most important poultry shows in this country the cup for the ten best birds has never been equaled by any breeder in America. **Great Stamina and Vigor** are to be found in my birds, not usually found in White Orpingtons. I attribute this to strong foundation breeding stock, our pure air and the blue grass range, 100 acres in Russell Cave Poultry Yards, and 8,000 acres in Elmendorf Farm. We still have a few more cockerels, pullets and hens at bargain prices. Eggs from the greatest of all matings, \$5, \$10 and \$20. **Duroc-Jersey Swine for sale.**

Russell Cave Poultry Yards Elmendorf Stock Farm  
Louis Lee Haggin, Prop. R. 3, Box 1025, Lexington, Ky.

are: Cocks, 1st, 2d and 3d; hens, 1st, 2d, 3d and 5th; cockerels, 1st, 2d and 3d; pullets, 1st, 4th and 5th; pens, 1st and 2d, with all specials offered.

Their birds were shown in the very best of condition and of the quality bound to win. Their three winning cocks were in a class all by themselves, large, fine fellows, with the best of form and fine heads. The cockerels show the best of breeding and type. The third bird a mite young, but without question one of the best we have ever handled. First pullet positively white and sound with an ideal head. Both pens, the first an old pen and the second a young pen, were royally mated and seen at their best. A great collection, and a great line.

Buff Rocks a strong class in quality with Mr. E. H. Lichtenwalter, Girard, Pa., winning: Cocks, 1st and 2d; hens, 1st and 2d; cockerel, 5th; pullets, 2d, 4th and 5th; pen, 1st. This line has the champion show record in this country, for they have been shown about at every prominent show ever heard of. This year they have won at New York, Philadelphia, Springfield, Ill., and here. Mr. Lichtenwalter is one of the original Buff breeders and was

lately elected president of the American Buff Rock Club, an honor he well deserves.

Partridge Rocks a large and beauty class, many very fine quality birds shown here. C. J. Loyd & Son, Greensburg, Ind., winning cock, 1st, 3d and 5th; hens, 2d, 4th and 5th; cockerels, 2d and 5th; pullets, 2d and 4th; and pen, 1st. First cock one of the best we have seen and grandly shown.

White Wyandottes a large class, shown well and with many fine birds. First pen by Chas. McClave one of extra quality.

Buff Wyandottes a beauty class in every respect with sound color and beautiful type the features. The Rocky Run Farm, Northfield, O., showed strong in all classes, winning cocks, 2d and 4th; hens, 5th; cockerels, 3d and 4th; pullets, 3d; pens, 1st, 2d and 3d. Pens well mated and shown at their best.

In the S. C. Rhode Island Reds we found an extra strong class and many exceptionally grand birds. It was a hummer all through, the kind with quality that we like to see and handle. The Schenley Heights Poultry Yards, 1202 Commonwealth Building, Pittsburgh, Pa., made another record here

on top of their glorious win at Philadelphia. Here they won: Cock, 1st; hen, 1st and 3d; cockerel, 1st; pullets, 1st and 2d; and pen, 1st. The winning cockerel also won the show sweepstake special for best bird at the show. Another of this same line won the same high honor at the Philadelphia show in December. This line has size with proper carriage and shape, even color and sound surface and under.

Mr. D. M. Coverts, Willoughby, O., won 2d cock on a fine and well finished bird.

Mrs. E. W. Colby, Willoughby, O., won cockerel, 2d, and pens, 2d and 3d. Mrs. Colby is a very enthusiastic breeder and we wish her success.

The Rose Comb Reds were also a very large and strong class of birds with good head points and very sound color in evidence. Mr. Robert Mawer, Perrysburg, O., proved a winner as follows: Cock, 1st; hen, 2d and 5th; cockerel, 4th; pullet, 4th; and pen, 2d.

Mr. W. F. Zimmermann, Willoughby, O., won 2d and 3d pullets.

Mr. M. C. DeLoof, Willoughby, O., won 1st pen and 2d cockerel.

The S. C. White Leghorns were out in liberal numbers and in real good

# Riley's Barred Ply. Rocks

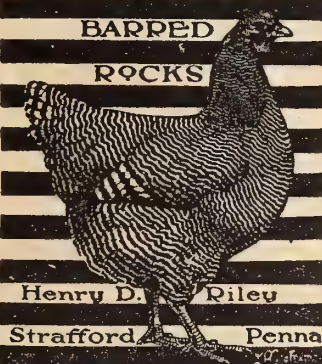

H. D. Riley,

Trafalgar, Ont.

Dear Sir: You will probably remember our having purchased two settings of eggs from you last spring. We were successful in raising twelve chicks. We entered some of these cockerels at Guelph, Can., and won with your birds, first, third and eighth prizes in a class of 69. The first prize cockerel is the best one we ever owned and we consider him worth \$250.00. You may be sure we are well pleased with the eggs you sent us, and it proves to us that you send your customers your best. Yours truly,  
(Signed) Chas. Hall & Son.

The Riley Trade Mark of Perfection

RILEY'S  
BARRED  
ROCKS

Henry D. Riley  
Strafford, Penna

Whenever you see the "Bars" think  
of Riley's Rocks—Barred of course

East Providence, R. I.

Henry D. Riley,  
Dear Sir: I have more good news for you. Last week, the cockerel I hatched from your No. 5 pen eggs won first prize at Boston. It was the largest and one of the best classes ever entered at that show. He is a wonderfully fine bird, and was very much admired by all fanciers who saw him. Thanking you for the way you treated me, Yours very truly,  
(Signed) W. W. Carpenter.

The proof of the quality of the eggs that I can send my customers, and do send them, is in the results that they have obtained the past season, and I have many letters similar to the above from satisfied and grateful customers telling me of victories won at some of the largest shows in the country. The third prize cockerel shown by me at Madison Square Garden this year was hatched by a customer from a setting which he purchased. My great record at the Quality Show of the World—Madison Square Garden—for the past three years has shown my strain destined to be the leaders of the world.

At the Great Cleveland Show, January 21st-25th, I won 2d cockerel; 1st, 2d hen; 1st, 2d cockerel; 1st, 3d pullet; 1st pen. I have never had such wonderful quality as are to be found in my matings this year, and many winners must be hatched. My mating list is ready to mail, and if you really want to breed birds fit to win any show—if you want the best—write me. A grand lot of cockerels at reasonable prices, for quality offered, for sale.

Henry D. Riley, Box B, Strafford, Chester Co., Penna.

**Usual price 25c each**  
but we offer *two* galvanized  
iron drinking fountains for  
25c as a special inducement  
to get you acquainted with

## PURINA CHICKEN CHOWDER

—a dry mash composed of alfalfa, corn meal, bran, middlings, granulated meat, linseed meal and charcoal, the great egg mash and

### GROWING FEED

for baby chicks. Purina Chicken Chowder produces tender and plump broilers at an early age and advances the egg laying period from 2 to 5 weeks.

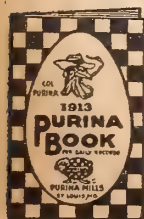

Col. Purina says: "If Chicken Chowder won't make your hens lay, they must be roosters." Chicken Chowder makes fertile eggs for hatching and early broilers that bring fancy prices.

Clip Col. Purina's head from a bag of Purina Chicken Chowder and send it to us, with 25c, and we'll ship you the two serviceable, 25c galvanized iron, chick drinking fountains delivered by parcels post.

Purina Poultry Feeds are sold by the leading dealers and grocers. If your grocer cannot supply you, ask him to order a supply including Purina Chicken Chowder from his jobber.

### Poultry book free!

For your dealer's name I will send you this 48-page Poultry Book, containing plans of houses, breeding and feeding charts, space for daily egg records, cures of diseases, etc., and full instructions on how to successfully raise baby chicks. Write today.

**Col. Purina, Purina Mills,**  
801 South Eighth St., St. Louis

quality. All the winning cockerels were exceptional birds.

Black Minorcas were a large class of fine birds.

Anconas as usual were a feature class here with Mr. H. C. Sheppard, Berea, O., the conspicuous winner, as follows: Cocks, 2d, 3d, 4th and 5th; hens, 1st, 2d, 3d and 4th; cockerels, 1st, 3d and 5th; pullets, 1st, 2d, 3d and 4th; pens, 1st and 2d.

In Rose Comb Mr. Sheppard won all but one first prize, repeating just about as above. He has long championed the Anconas and has produced many of the best of this variety.

All the Orpingtons were large and good classes with competition of the best in all. The Buffs numbered over 100 birds with the Roseland Poultry Farm, South Euclid, O., winning cock, 2d; hens, 3d and 4th; cockerels, 3d; and pens, 3d and 5th. This line is well known and has the desired quality.

The Briarcliff Farm, Atlanta, Ga., fresh from their win at New York and other shows came here with the following results: Cocks, 1st and 4th; hens, 1st and 2d; cockerels, 1st and 4th; pullets, 1st and 2d.

In Blacks this same farm won cocks,

1st and 5th; hens, 4th and 5th; cockerel, 1st; pullet, 4th; and pen, 4th.

In the Whites their winnings were: Cocks, 1st, 2d, 4th and 5th; hens, 1st; cockerels, 1st, 2d, 4th and 5th; pullets, 1st and 4th; pen, 2d and 3d.

The Parsons Poultry Plant, Avon Lake, O., won: Cock, 3d; hen, 3d; and cockerel, 3d, in this class of White Orpingtons.

Hamburgs were seen in all their varieties and made a beauty display. Polish also were shown well.

Both Silver and Golden Campines were seen to advantage here in good strong classes. Messrs. Gensemer Bros., Creston, O., winning in Silvers: Pullet, 3d, and 2d pen. In Golden 2d and 3d cockerels, 2d, 4th and 5th pullets and 1st pen.

Houdans a very large and good display with close to 60 birds seen.

Bantams were seen in all varieties and formed a good display.

Ducks and geese were one of the features of the show and very large classes seen here. There was value in this display.

We believe that Mr. Coburn will also have something to say of this show. We were highly pleased with our visit there.

## Madison Square Garden N. Y. Show

With Notes and Description of the Different  
Classes—Part II.  
*By H. P. Schwab*

**T**HE EVENTS of this great show are indelibly stamped in memory, and history will record them as long as time lasts. This show also marks the changing of the pilots, and we shall look with every hope and wish for the success of the new. I believe the industry has been particularly favored by the selection of Mr. Chas. D. Cleveland to succeed Mr. Crawford, and he surely deserves the hearty support of all.

Our special interest was attracted by the general interest shown in all the varieties. The exhibitors and the attending public were most enthusiastic, and the future surely has much in store for all. It is brighter than for years and with success assured.

The great "Ringlet" record with its distinctiveness received general praise, and Mr. Thompson and his son were kept busy thanking people for their kind expressions, shaking hands and showing their superb winners to all anxious to see and to inspect them. With their just right evenness and bright, clean surface color in evidence, the breeders were a-guessing of their under-barring, and this happened to be their strongest feature. For all-around quality in shape, color and barring Mr. Thompson's first prize cockerel was the superior of any male I have ever seen, and with his others up close. His winning of first pullet and champion female special makes him also a contender with the best in this line of breeding. Both in males and females his line is of the highest and best possible grade and quality.

Line value is sure to tell and Citizen Haldie Nicholson, Leominster, Mass., has made a Boston record with his Barred Rock male line since our last report. Winning first cock at New York, he sent a brother of this bird to Boston and there also won first and

champion male and third and fifth on cockerels with first cockerel mating pen.

The record made by Yama Farms, Napanoch, N. Y., on both their Rocks and Minorcas was one of great credit to all. Never before was there such competition to contend with. Their line is worthy and will make its mark. They have later won about all at the Buffalo International.

The display of pullet mating pen shown by Mr. A. C. Hawkins, Lancaster, Mass., was one of the features of Barred Rock row. It was a beauty collection of highest quality, with a male showing the best of line barring, and very clean cut. The females were all alike and of the proper shade of color with beautiful type.

The Owen Farms made a display of their prizes and cups won this fall at the great shows of the South, including Nashville, Memphis, Atlanta, Augusta, etc. In cages near by were their display pens of White and Buff Orpingtons. For competition they entered but a few White Rocks and in pens won 1st, 2d and 3d. We give a list of their winnings elsewhere in this issue. The records will show the Owen Farm line to be better than ever this year. Their mating list has just been received.

Mr. A. J. Fell's winning of four firsts in that class of 260 White Wyandottes is still ringing in our ears. It is the stamp of quality, and a win well deserved by a very worthy breeder. We have written up this line before, and will again in the near future.

Mr. W. R. Graves, winning second pen, was also one to our liking, but few pens can ever be selected and mated as that one was, and with such a typical male.

The Sunnybrook Farm, Eatontown, N. J., Columbian Wyandotte specialists, won: Hens, 1st and 3d; cockerel, 3d, and 1st pullet. This line has been a

consistent winner for many years.

D. Lincoln Orr, Orrs Mills, N. Y., also of Columbian Wyandotte fame, and a prominent winner at Philadelphia and other shows, won here: Cocks, 2d and 5th; hens, 4th; cockerels, 2d and 5th; pullet, 2d and 3d; and pen, 1st. Also first display and specials. This is a splendid win made with a great line of quality birds.

In Rose Comb Buff Orpingtons the

class was the best we have seen with good type and rich color. The winners here were Hillside Farms, A. R. Chandler & Sons, B. C. Roecker, H. C. Faulkner and Dr. T. H. Smith.

The record made by Foxhurst Farm, Lime Rock, Conn., will stand for years as a model for the Black Orpington breeders to aim for, their winning of first prize in all classes being a stupendous affair.

Kettering and Stute, and the Sandy Lick Farm, 966 Liberty avenue, Pittsburgh, Pa., entered a few Orpingtons in all classes and received good mention. Their second Black hen and fifth cock were birds of great merit in both color and type.

The Joe-Pye Orpington Farm, South Norwalk, Conn., satisfied with their splendid win here, sent another line of their Buffs to Boston and the result

CHICK MACHINE

EGG MACHINES

THE MISSING LINK

## SIMPLEX BROODER STOVE

# Why Not?

1500 Chicks can now be brooded in one brood more successfully than you can brood fifty in the old style back-breaking way. Why not investigate and save 90% of your labor, 75% of your operating expense and raise from 20% to 50% more chicks; better, stronger and more profitable stock.

No fumes  
No smoke

No wick  
No gas

**1500 Chicks**  
Successfully brooded  
around one stove

**Direct Contact Burner**

## The Simplex Brooder Stove Saves Labor

because you have all your chicks in **one room** around one stove instead of divided into flocks of fifty with a **dozen** or more lamps to care for. You have only one large, well **ventilated** sanitary room instead of a lot of unsanitary brooders. You have **one flock** to feed and water, instead of a lot of small flocks. You will not have to take an hour off each morning to bury a lot of your **PROFIT**.

## The Simplex Brooder Stove Saves Money

because our **radiating drum** and heat deflector get every possible degree of **heat** out of the oil consumed. Your oil is fed into one **large flame** instead of many small flames. Instead of using 30 quarts a day for 1,500 chicks, you use from 12 to 16 quarts in the Simplex Brooder Stove.

## The Simplex Brooder Stove Saves Chicks

because it keeps them supplied with fresh, pure, warm air at all times. It is a well known fact that air is more essential to animal life than food. We breathe the air in order to secure the oxygen contained therein. After passing through the lungs the oxygen is extracted, and expelled in the form of foul air or carbon dioxide, which is poison to any living animal, and to the hover system it is easy to trace the reason for the slow growth of chickens and the white diarrhoea, which sickens the heart of the poultryman and puts so many of them out of business.

## The Simplex Brooder Stove Saves Worry

because it is the only brooder stove equipped with a **direct contact burner** which cannot go out so long as you keep the oil tank filled. There is no wick to become foul and smoke. It saves worry because our automatic regulator absolutely

controls the temperature in the room. With a Simplex properly installed you can go to bed at night with the assurance that your chicks are taken care of and will be there in the morning, bright and happy, big, strong and profitable.

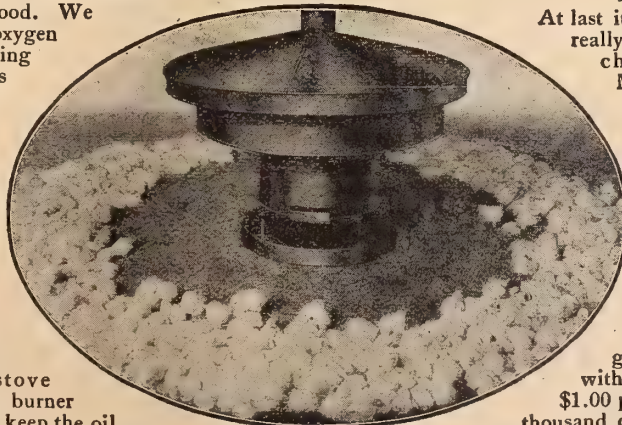

It is now possible to realize your fondest dreams of successful chicken rearing. A Simplex will make it possible for you to realize the profit you should have, but is now being lost in the brooder house. Stop the loss, our catalog is free for the asking.

## The Simplex Brooder Stove Catalog Free

We want to send you this book because we know it will show you how to end your brooder troubles, because you will realize that the Simplex Brooder Stove is positively the best thing ever offered to the long suffering poultry breeders along the lines of raising chicks. Send in your name and address and we will send you a copy free. You owe it to yourself to investigate this money-making brooding system. Send for catalog today. **IT'S FREE.**

## A Book on Brooding

At last it is possible to buy a book which really tells you something about raising chicks. It has been written by Mr. N. P. Husted and is positively the best thing along this line ever written. It tells how to raise chicks from beginning to end. It tells you how to feed hens to get fertile eggs and tells how to feed chicks to get hens which will lay fertile eggs. It's simple, no expensive coops or equipment. You can begin operations on your farm the next day, and increase your egg production and get eggs which will hatch chicks with a chance to live. The book is \$1.00 per copy, but the first edition of five thousand copies will be sold at 50c postpaid. Send us 50c and get a copy. If you do not think it worth many times that, return it and get your money back.

THE SIMPLEX BROODER STOVE CO., 137 Fourth St., Grand Rapids, Mich.

**THE SIMPLEX AND NATURE MAKE POULTRY PROFITABLE FOR YOU**

will be found in our report of that show. It is but seldom that one line can make such records at New York and Boston.

Miss Carey, Toynton, Spilsby, England, displayed some of her Orpingtons and Favorills here, at Philadelphia and at the Palace shows that attracted much attention.

The Rose Comb White Orpingtons are rapidly coming to the front. The breeders now have them with the best of type, equal to the best of the Single Combs. The exhibit of Lawrence Jackson, Hayesville, Pa., was a revelation to us. Birds with the very best of form and fine heads were here seen to advantage.

The exhibit of Diamond Jubilee Orpingtons by Mrs. H. B. Prescott, Andover, Mass., was one of particular interest and beauty, she winning first on both cock and hen.

Blue Orpingtons proved themselves all we predicted for them and a very large and fine class was seen to advantage. Mr. Haldie Nicholson won four of the five first prizes on splendid birds, well shown. We believe Mr. Nicholson was the first to introduce and breed them in this country and his success is well deserved.

Mr. W. H. Depper, South Lincoln, Mass., also won well here and since at Boston and has made another great record. See our report for same.

Mr. D. W. Young's S. C. White Leghorns are just as undefeatable today as ever before. Year by year this wonderful line has made its marvelous records with the best of quality birds. This line is the foundation of Leghorn success.

Black Leghorns should become more popular. A nice class was seen here and we have also noted them at several other shows in real quality.

Indian Games, one of our oldest varieties, formed a good class with the winners a selected lot. Mr. J. N. Hazlett, Marianna, Pa., won very strong in all classes.

The breeders owe much to Bird Bros., Meyersdale, Pa., for bringing the beautiful Partridge Rocks to their present high quality. Their work has been wonderfully successful and the records they have made here at the Garden show for the past three years is one of unequalled value to them and the fancy at large. Their Bronze turkeys have made the same high standard record winning for several years the leading awards here.

We were pleased to meet here Mr. Barton T. Fell, Trenton, N. J., owner of the Parkway Farms, who has just made the southern shows with his Silver and Partridge Rocks, Campines and Black Leghorns, and has brought back

from Atlanta the best record we know of. See special report.

This was our first meeting with Mr. Seaman, of the Yama Farms, and we will see to it that it won't be our last. He has the best of reasons to feel very enthusiastic over the records his Barred Rocks and S. C. Black Minorcas have made, and he will bear watching in the future.

Mr. Bright, of the Grove Hill Farm, spent two days at the show looking over the Barred Rocks and having particular interest in the S. C. Brown Leghorns where he was exhibiting.

The Snow Crest Farm, Clarks Summit, Pa., specialists in Runner ducks, made a beauty display and won well in all the classes.

The Light Brahmas as bred by Balch and Brown have the winning habit here, and have held it for years. The past two years they have also shown at Philadelphia and won many cups and highest awards.

Several of the well known Orpington breeders were showing at Baltimore and here at the same time and it kept them running back and forth as busy as bees. Mr. Aldrich, of the Aldrich Farm, was one of these, and besides making a record here he also won well at Baltimore by taking three firsts and two seconds.

Major Hugh Rose was another who had split his string and was at both places with a divided line. At Baltimore he also won three firsts, two seconds and several other prizes of note.

Mr. Defafield, the owner of the Sunswick Farm, came up from Baltimore to see the show and class here. His birds were in the great show of the South and won: Cocks, 3d; hens, 1st, 2d and 5th; cockerels, 1st, 2d and 4th; pullet, 5th; and pen, 2d.

Mr. H. D. Riley spent a few days at the show, meeting friends and busy with his Barred Rocks and the club. He is particularly well pleased with the record his line has made in customers' hands.

Mr. S. M. Goucher, of the Maple Grange Farm, Moorestown, N. J., breeder of Barred Rocks, could not spare the time, so sent Mrs. Goucher to look over the class of wonder. Mrs. Goucher, like her husband, is an ardent fancier of the Barred beauties. They have been breeding for some years and this year, like others, have made grand records at Camden, Philadelphia and Williamsport.

The New York show around Barred Rock alley would not look natural without our old friend Mr. E. L. Miles, of Sag Harbor, N. Y. He is one of the breed's most reliable champions and a breeder for a great many years. Mr. Miles seldom shows away from home, but his line has a national reputation.

Mr. Jos. P. Hildorfer, the S. C. Black Minorca breeder from Pittsburgh, Pa., was exhibiting at Baltimore where the club meeting was held and spent a day at New York seeing the Blacks there and visiting friends.

Mr. Robert J. Walden, Middleburg, Md., was also showing his Barred Rocks both here and at Baltimore and received good mention at both. Mr. Walden has made strong records this year at Hagerstown, Williamsport and Philadelphia with his birds.

Mr. Irving Rice, Cortland, N. Y., breeder of S. C. White Leghorns, and who has judged them at this show, was a welcome visitor. He reports a large flock of choice birds. Mr. Rice

## More Fertile Eggs More Vigorous Chicks

IT HAS been demonstrated time and time again by Experiment Station tests and reports—that Meat Poultry Food is necessary for the greatest fertility of eggs. It has also been proved conclusively that the chicks from flocks fed with Darling's Meat Scraps are sturdier and more hardy than those of flocks nourished by grain feeds alone.

### Darling's High Protein Meat Scraps Contain 55% Protein

and are the highest grade product on the market. Every ounce of Darling's Meat Scraps is absolutely fresh. Trimmings from roasts and steaks sold over the butcher's counter are picked up by our wagons the same day and cooked that night. In short, Darling's Meat Scraps are made from the fresh trimmings from the edible portion of the carcass. This gives uniform quality and sweetness.

They are low in fat, and fine ground as recommended by both the Experiment Stations and practical poultry raisers.

Darling's Meat Scraps cost no more than goods of lower protein content. Insist upon Darlings 55% Protein Meat Scraps at your dealers.

**Every Poultry Man should send for a free copy of our book on poultry feeding.**

This book is replete with timely, helpful and specific suggestions and hints on the care and feeding of poultry that you should know and profit by. It tells how to increase egg production and egg profits. Whether you own 25, 50 or 500 fowls, you will be tremendously benefited by reading and studying this book. Write for your free copy today. Simply address:

**Darling & Company**  
4201 Ashland Avenue - Chicago  
**The Van Iderstine Company**  
16 Railroad Avenue - Long Island City, N. Y.

has been a prominent winner for many years and a most reliable breeder.

One of the younger and very interesting Barred Rock breeders is Mr. Geo. J. Cunningham, Sag Harbor, N. Y. He has won his spurs here and has always shown a fine line of males.

#### The Plymouth Rocks.

The Barred Plymouth Rocks numbered 191 birds and formed the best class in general quality that we have ever seen. Condition of the birds was superb and interest at its greatest value.

**Cocks**—First a great bird and at his very best, very narrow and evenly barred, extra under, strong eyes and fine head. Second in finish and general condition a wonder, evenly and snappy barred and very close in barring. A fine blue cast, but just a mite past his best condition. Head points grand and eyes flaming red, a very close decision. Third another beauty in type and quality barring and color with a fine head and strong eyes, not fully finished in tail. Fourth one of the best ever seen with all that is desirable in a great bird. Fifth a marvel in line barring as well as in form and style with extra fine head, a most attractive bird. Sixth a very strong and desirable bird with form and barring of value, not fully finished, nice head and a grand breeder. Seventh another quality bird, strong in barring. Eighth a bird of great character, but not in full feather here.

**Hens**—First a beauty well shown, barring of equal width and very clean, fine form and nice style. Second short in body feather at this time, choice shade of color and very fine form, was the first pullet at this show last year and a most valuable hen. Third one of the very richest in shade of color and finely barred. Fourth similar, both in grand condition and best of form. Fifth a grand winner with wonderful barring, a beauty and bird of quality. Sixth and seventh both rich in shape and color. Eighth one of the very best when in full feather.

**Cockerels**—First the best Barred Rock male seen to date, a model in shape, style, color and barring. He had the "Ringlet" bars all over in surface and under, narrow and clean. Head ideal, strong eyes and finished in every section. Second the equal of the first in color and barring with the best possible kind of wing and fine head. Third one of the very best in color and barring, but just a mite immature and not quite filled out, nice wing and tail. Fourth a fine barred and strong bird with dandy head and good eyes. Fifth a bird of good type and very even color and markings. Sixth a beauty in size and form, but just passed his very best. Seventh a bird of promise with the best of under-barring, very clean, grand head and style. Eighth similar to the sixth.

**Pullets**—First a wonder in surface and under-barring and of fine form, tail a mite short, but a bird of great merit in all ways. Second a rich one, well shown, barring and color very fine. Third one of the best in surface color. Fourth a beauty and bird of value, well shown and of remarkable barring and clean color. Fifth very similar and well and snappy barred. Sixth narrow and grandly barred and of superior form. Seventh and eighth both very desirable birds. No. 198 was a cockerel-bred pullet shown by Mr. Thompson for exhibition only, a marvel

## Your hens lay more eggs if the poultry house is comfortable

And it's easy to have a comfortable poultry house if you use on the sides and roof—

### Certain-teed Roofing

(Quality Cert-ified—Durability Guaran-teed)

in Rolls and Shingles

Success with poultry depends to a large extent upon two things—good feeding and good housing. Ventilation is necessary, but drafts are harmful.

**Certain-teed** Roofing is easy to lay, costs less than metal, tin, or wood shingles, and is absolutely water and weatherproof.

The **Quality** of materials used in making **Certain-teed** Roofing is **Certified** and the **Durability** is **Guaranteed** by us for fifteen years—and will last much longer.

**"Modern Building Ideas and Plans"** Our new book illustrates the latest ideas in poultry house construction, as well as residences, barns, bungalows, etc., it suggests economies that may save you money. It is easily worth \$1, but as it shows many uses for **Certain-teed** Roofing we can afford to sell it for 25c. We will, however, send a copy **FREE** if you go to your dealer, and ask him for one.

## EGGS-SPROUTED OATS-EGGS

To meet the great demand for eggs this Spring—eggs of high fertility for hatching,—feed the hens something green,—and there is no green feed the equal of the living, vitalizing, growing, Sprouted Oats.

Eggs of a big per cent of fertility mean chicks of great vitality,—chicks that live and grow.

To force chick growth, to bring the young pullets to the laying stage, to develop fries and broilers quickly, feed the chicks germinated wheat.

To get great quantities of Sprouted Oats and germinated wheat quickly, buy a

### DOUBLE QUICK GRAIN SPROUTER

THE PERPETUAL POULTRY SILO

A veritable hot-house, growth-forcing machine. Makes two to four bushels of feed from one of grain. Soon pays for itself in the feed it grows and the increased egg yield. Sprouted in 24 hours and forces growth of two inches and more daily. The Double Quick is the original grain sprouter, now three years old, several thousand being in use in every part of the United States and Canada and is endorsed by hundreds of users. Catalog will give many letters like the following:

Mrs. Lucie Shields, Mt. Carmel, Ill.—"I have used your grain sprouter for six months with great success. It has paid for itself several times over by an increased egg yield."

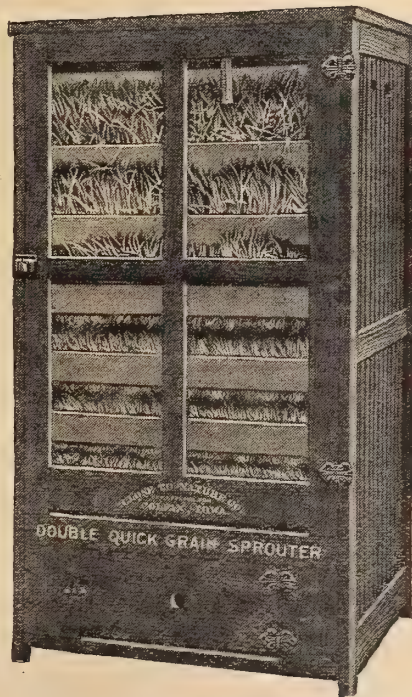

D. E. Jones, Grand Junction, Colo.—"My sprouter is working fine. I built a box around it and put it outdoors and the thermometer went down to 16 below zero, but it kept on germinating. I surely gave it a good test and think it is fine."

L. T. Davis, Corsicana, Texas—"Enclosed find \$24.00 for three Open-Air Hovers. I have my No. 5 Double-Quick Sprouter in operation and it does every thing you claim it to do. Is indeed a grand machine. Would advise anyone in the poultry business, large or small, to get this machine for it will get the eggs any season of the year."

Mrs. John E. Brown, Concord, Mich.—"The sprouter has paid for itself in finding oats for seed next year. I have tested oats for seed for the whole neighborhood."

Made in six sizes from a few hens to 1,000. Send for complete booklet on the grain sprouter and sprouted oats.

**Close-To-Nature Co., 38 Front Street, Colfax, Iowa**

in beauty. They come in clusters of "one" was the truthful sign displayed.

**Pens**—First, the male one of superior merit and one of the best barred birds in the show, nice form and grand head, females all of size and exquisite form, all just alike in shape and barring and with the best of wings, a superb collection. Second, male the equal of the one in winning pen, females also well mated and of quality, up close. Third a very nice pen with strong male, one female a little small. Fourth a good pen, well shown. Other exhibition pens shown well.

**Cockerel Mating Pens**—First a marvel in strong but clean color and barring and a wonder in selecting and mating. Second a royal pen of rare quality. Third well shown with most excellent breeding birds.

**Pullet Mating Pens**—But two shown this season.

White Rocks numbered 155 birds, making a royal showing in all the classes. Each contained several exceptional birds of merit.

**Cocks** a strong lot with the winner one of the best ever seen here or elsewhere. Second a bird of note and a great winner, nice form and grand condition. Other winners and several without mention grand birds.

**Hens**—A selected lot with honors close between the four best winners. They had the same form and style with good heads and the best of color and condition. Fifth and sixth up close and of quality. No. 247 looked well to us, but in such competition the ribbons fail to go round.

**Cockerels**—A great class of birds from first to last, and then some. All shown at their best condition.

**Pullets**—First one of the rarest and grandly shown, positively white, with fine head and near perfect form. Second and third up close and beauty birds. Others also of the best; the class full of merit.

**Pens**—A wonderful collection of highest quality. It looked as if some of the big fellows made extra efforts to win here at the expense of the single classes. The first three pens were in a close class of great quality and condition, the males were marvels. Others in the winning strong. Pen No. 3019 all old birds and one of great merit. The cock in this pen one of the best we have seen, and a New York winner.

**Buff Rocks** are always a hot class here and this year they seemed stronger than ever before with type, head points and color showing well.

**Cocks**—First in a class by himself with the best of form and the richest and soundest of color. Second and third grand specimens shown at their best. Fourth and fifth among the best seen this season.

**Hens** were a very hot class all through, the winner a model in form and of sweet color. Second also very rich with the third and several others running up close.

**Cockerels**—A great lot with the best bird there shown carelessly. The first and second choice birds with fine type, the second very even in color and stands

well. Third a strong bird well conditioned.

**Pullets**—A dandy class of quality birds. They seemed to us exceptionally good in sound and even color. The winners a very select lot.

**Pens**—All the pens were seen to advantage and were marvels in mating and in general quality with the males seen in the winning pens of great merit. The first pen a beauty in every way.

**Partridge Rocks**, the same as last year, were a feature of the show. Such quality classes speak well for the future of this variety. To fully describe the winners would be to repeat all through, as they were as near alike as possibly could be.

**Cock**—First a beauty in type and of the richest of color and markings with extra fine head. Neck surface and under of the best. Second up close in every way. Third and old favorite and one of the best ever produced. Others of same grand quality.

**Hens**—First to third in a close class, the best of color and superb in markings. Fourth and fifth grand strong hens.

**Cockerels**—All five winners on a high level and many others up close. A most beautiful class, the winners without exception perfectly strong under in all sections. Beauty heads on all.

**Pullets** grand as a class in every quality and condition.

**Pens**—First a wonder in mating and quality. Here were seen several birds of winning records of the past that are remarkable beauties. Second a pen

FREEDPORT, ILLINOIS

# NICHOLSON'S BARRED ROCKS AND ROYAL BLUE ORPINGTONS

## ROYAL BLUE ORPINGTONS

New York, 1913

I won third cock, first hen, first cockerel, first pullet, first pen. Also A. P. A. diploma for the best Blue Orpington cockerel. This was the first show with competition. Seven exhibitors were in line with the best imported birds from the leading breeders of England. Remember, I bred first cockerel, first pullet and first pen myself. I breed all my winners in Barred Rocks and Blue Orpingtons. Above birds will not be exhibited again this season. The above shows you I have the best Blue Orpingtons in America, and as I am no amateur at mating you will get results from my eggs.

## BARRED ROCKS

New York and Boston, 1913

I won at New York, first cock and

eightth cock. First cock acknowledged the best Barred Rock ever exhibited in the Garden. Note—This cock was barred to the skin in every section. Wing unbeatable. Remember, my birds are no top-barred birds, but barred to the skin.

Boston

New String of Birds

I won first cock, third cock, third and sixth cockerel, first cockerel bred pen. This cock bird, like the New York cock, needed no judge to put him first, and to the breeders and judges he was a revelation. Remember, my Barred Rocks don't fade out, but are barred to the skin—as cockerels, just as good when cocks. We have a few pens of Blue Orpingtons and Blue Wyandottes. Are first prize winners at Chicago, Boston, Crystal Palace, England.

**Afterthought**—Remember, I do not breed Barred Rocks devoid of underbarring. Isn't it nice to open a cockerel up and see nothing but white or blue mist. Such males will breed you some hot stuff, will they not? They will not.

**Haldie Nicholson : Box 9 : Leominster, Massachusetts**

well mated and with grand quality in all.

**Silver Penciled Rocks**—A small class of good birds with first hen and first cockerel very good.

**Columbian Rocks**—A rather small class for this prominent variety, with many grand birds shown in all classes. First hen one of the best.

#### Wyandottes.

The White Wyandottes with 260 birds shown were the banner class of the show. In quality and in condition it was a beauty class with as fine a lot of headed birds as we have seen brought together.

**Cocks**—First a marvel in beauty, type and value, shown at his best; a wonderful bird in every way. His back and tail finished to perfection. Second and third both beauties, well finished. Fourth a grand bird and true Wyandotte in every line. Fifth very neat and trim.

**Hens**—First a very rich hen in quality and white as snow. Second up very close and well finished. Third a good bird. Fourth one of the best with a beauty back, breast and tail, stands clean. Fifth strong in type and with a great head and the best of color.

**Cockerels**—A great class of birds with merit in every coop. First a well finished cockerel with full tail and typical, splendid head and fine eyes. Second and third both dandy Wyandottes. Fourth and fifth very desirable birds. Many others of great worth seen here and the competition the best ever had.

**Pullets**—A great class of 48 birds, including the best to be found, with type and maturity and finish the features. First a gem and a great winner. Second another of the highest merit with every quality. Third, fourth and fifth among the best and many other beauties here.

**Pens**—With 18 in line the judges had work here. First a great pen of superb quality and superior mating. Male a wonder and females alike and with the best of type. Second another of the best and of the very richest of quality. The male here a marvel and with a beauty head. The females all well mated and of superior merit. Third a dandy pen well shown with females very select. Fourth another very close up with the quality bound to attract. Others very well shown and of quality.

**Silver Laced Wyandottes** were one of the best classes seen here in several

years, with type and lacings of the best.

**Cocks** with twelve in line assured the best of competition. First a bird of exceptional form and very sharp and silvery, nice head. Second a rich marked bird and third up close. Fourth and fifth both valuable specimens.

**Hens**—A marvel in open lacing and sound color and typical, good head and fine eyes with splendid wings. Second very neat, a nice one. Fourth good in all ways and others well up.

**Cockerels**—First a royal winner and a very clean bird with grand head and the best of type. Nice breast and sound wings. Second a very rich bird, well shown. Third up close with others very near.

**Pullets**—A grand lot. First very sound in lacings and color, fine breast and good head and eyes. Second also a beauty. Third one of the best and a beauty in every way. Fourth and fifth strong quality birds.

**Pens**—First a beauty in mating and evenness, of grand quality.

Both Black and Golden Wyandottes good as far as they went.

Buff Wyandottes a very sweet class all through with splendid color the fea-

### DO YOU REALIZE

That this season Maple Farm of Midlothian is going to give its customers the "squarest square deal" in eggs from their

### White Plymouth Rocks

that has ever been known to poultrydom?

### JUST THINK

what it means to pick out a number of pens of birds good enough for exhibition matings and then to weed those down until the final result is one-third the pens that were started with. Isn't that a wonderful chance for both the exhibition and utility poultry raiser?

You want to know more about Maple Farm of Midlothian? Drop us a line asking for our new catalog. Our mating list will come too. Get the address right!

**Maple Farm of Midlothian  
Box 105, Tinley Park, Illinois**

Chas. D. Ettinger, Prop. R. R. Sta., Midlothian, Ill. Walter A. Cook, Mgr.

First Cockerel, Illinois State Fair, 1912

ture and with commendable type in all birds.

Columbian Wyandottes one of the best quality classes we have seen.

Cocks—First a beauty with grand quality. Second one of the best in type and with fine wings and markings. Others of quality.

Hens—First a superior bird well shown with grand clean color and good wings, nice type, etc. Second and third both grand good birds. Fourth a bird of note and of great merit.

Cockerels—First, second and third up close and of the best grade, with several other fine birds in this class.

Pullets—First and second stunners with extra markings and fine color, wings and tails. Good heads a feature. Third very sweet.

Pen—First a strong pen of quality.

#### Rhode Island Reds.

In Single Combs the classes were extra large and filled with the best possible quality. Head points with evenness of rich red color were the features with type up very close.

Cocks—First a very good bird and well shown, very good even color. Second, we did not handle this bird or see him to advantage. Third same condition. Fourth and fifth good quality birds. No. 982 one of the best to our mind and a great breeder without question. No. 996 extra even and rich color

with fine head. No. 999 one of the best in color and grand head.

Hens—First a beauty in even color and also wins shape special. Second, very nice and even, but appeared a mite dark to us. Third a grand hen well shown with plenty of quality. Fourth and fifth good. No. 1006 one of the best and we thought should have been placed. No. 1015 and No. 1016 both very good and former winners.

Cockerel—First one of the grandest birds ever seen, a wonder in color, very rich and even and a beauty head. We congratulate the owner. Second of uneven color with neck light and with but very short tail. Third a good sound bird. Fourth well shown and has lots of quality. Fifth a beauty of rich color and type. No. 1027 very even and the best of color. No. 1056 one of the richest and best. No. 1058 a dandy good bird.

Pullets—First well shown. Second extra type and very even color. Third a hot pullet, nice wing and color. Fourth very clean and good. Fifth a grand good bird. No. 1060 rich and even color and fine head. No. 1070 very even and of extra shape.

Pens—Both first and second grand pens of highest quality, well mated in shape and size and of richest quality. Third a good pen. Fourth the females exceptionally fine. Fifth a beauty in

color and even quality. No. 3097 a very strong pen, well shown.

Rose Comb Reds were another beauty class, well shown and full of quality, with nice heads the rule and very good form.

Cocks—First a real stunner in color and with grand tail and fine shape. Second extra fine in every way. Third and fourth strong birds with splendid type. Fifth very good. No. 1086 a grand bird with beauty tail and finish.

Hens—First one of the best and in prime shape and condition. Second and third up close. Fourth very nice and fifth another beauty.

Cockerels—First a corking rich one and strong in shape and of the best of color. Second a neat one. Third similar to the first. Fourth and fifth well up in all quality.

Pullets—First a rare beauty and in rare condition. Second and third strong birds along with the best. Fourth another of the best kind.

Pens—First grandly mated and of high and even quality. Second and third up very close and nice lots. Fourth extra choice male here with an even lot of females. Fifth a very strong and good pen.

#### Orpingtons.

A great collection in all varieties with most all birds in wonderful con-

## EGG PRODUCERS—If you want eggs buy Fishel's White Ply. Rocks

## Barred Rocks—S. C. Brown Leghorns

Winners at M. S. Garden, N. Y.; Buffalo, Detroit, Boston, Rochester, etc. They have won the leading prizes at our best shows for years. They breed true with satisfactory results assured in type, color and laying qualities. Our latest win at the Great Buffalo International Show, January, 1913, is the keynote to success. Our Leghorns set a new high-grade mark and show record by winning more points than all others. Cock, 1; Hen, 1-4; Cockerel, 5; Pullet, 1-2; Pen, 1. Silver Shield for Best Display and all Specials. At the late M. S. Garden, N. Y. Show, 1913, Pen, 2; Hen, 5. At Rochester, 1913, Hen, 1-3; Cock, 3; Cockerel, 2; Pullet, 1-2. Special Mating Cockerels, 1-2; Pullets, 1-3, and Specials. Our Barred Rocks have done equally well, winning at Buffalo Cockerel 2nd and Shape Special; Pullet 4th and Shape Special; Pen 2nd; Cock 3rd. A grand lot of choice birds in both varieties for sale. Write your wants. Eggs for hatching. Circular free.

## Covert's Barred Rocks Win

Again at Pittsburgh Great Exposition show, Jan. 1913, 4th cock, 2d pullet, 1 pen pullet mated, 2d pen cockerel mated

**CHICAGO, 1912** In the largest and best class of Barred Rocks ever brought together either east or west, 393 birds in all. First cock (29 in class), first and fifth hen (79 in class), second cockerel bred hen. The first and fifth hens are the same birds that won last year as pullets. I have also won at Buffalo, Cleveland and many other large shows during the past five years, demonstrating I have been and am producing exhibition quality for I raise all the birds I exhibit. My matings this year will be superior and I can supply your wants in either stock or eggs. Ten grand pens cockerel and pullet matings. Send for mating list. I guarantee to please you in your dealings with me. Write today, mention A. P. J.

Covert Barred Rock Farm : Willoughby, Ohio

dition. The great classes made strong going and close picking.

Bufs, with 123 birds shown, were all we could desire, the best of America, Canada and England was there competing for honors.

Cock—First one of the best ever, extra type and best of sound color. Second another rich one and good winner. Third grand in color and good head. Fourth and fifth both grand birds. Several other good ones seen.

Hens—First very sweet in color and of nice form. Second a rare good one. Third and fourth both beauties. Fifth sound color.

Cockerels—First a great bird and good winner, well shown, hard to beat this kind. Second and third nice in color and of good form. Fourth a rare quality bird. Fifth also a beauty with finish.

Pullets—First very good and sound, nice type. Second well shown and of rare color. Third, fourth and fifth all choice and up close.

Pens—First a model in form and quality, finely mated and shown. Second grand male and well mated females. Third also a rich pen. Fourth a grand pen with beauty birds all through.

Whites—A wonder class of 183 birds, full of features.

Cock—First well shown and a grand bird. Second up very close and one of the best. Third a beauty in type and color with condition. Fourth and fifth among the best. Other fine ones here.

Hens—First one of the rarest and shown in wonderful condition. Second another beauty, fine in form. Third a good one. Fourth very good and nicely shown. Fifth of nice size and color. Fifth of nice size and color.

Cockerels—First, a very good bird, not at his best. Second and third good, typical birds. Fourth, a wonder and a favorite with many. Fifth and several others were birds of merit.

Pullets—First and second, very close, both of the best. Third, a very neat one, grandly shown. Fourth, grand, and fifth close up.

Pens—A rich lot, with first pen one of the best seen at any time. In mating and high quality this pen was a marvel. Second, another strong mating of quality. Third, a great pen with a beauty male and very choice females. Fourth, well conditioned and shown. Fifth, very good.

Blacks—A great class of 120 birds. We believe this the largest class ever shown here.

It is simply useless to describe this class bird by bird; just imagine quality as can only be found in the beautiful blacks and you have the correct idea of the winners from first to last one. This class in quality and condition was all that we could hope for.

The Blue Orpingtons carry the same form as the blacks and in the winners seen here, both in color and in shape, they were all we expected.

The Rose Comb White Orpingtons

were marvels in quality, with fine heads and the best of form that is found in the S. C.

#### Leghorns.

In the S. C. Whites type again was the feature; it was the form and style that has won here for years, and is good for time to come. The winning males were all alike, even in finish and with beauty heads, the best of eyes and positively white. The females as grand as ever and of the highest merit. Pens well and evenly mated, with choice males seen here and the best of females.

The S. C. Browns, very rich in color as a class and with grand size and good forms; there was little to pick here between the winners.

The Bufs, as always, strong here, with sound color and splendid finish, showing well as a feature all through the class. The winning pen a marvel in mating and in quality.

R. C. Browns, one of the best classes and very strong; the males an extra fine and selected lot with nice heads.

#### Campines.

In Silvers a class of 130 birds and the best and evenest lot seen. The first three cocks of the best possible quality, with the winner in a class all alone. Hens, a rich lot; all winners very strong birds in markings and form. Cockerels, the largest and strongest class. First a marvel, very sharp color. Second a beauty, nice head, etc. Third a very rare and strong bird, and many other good ones here. Pullets in good num-

## POLEY'S WORLD'S BEST BUFF ROCKS

Greatest Victory at Madison Square Garden, N. Y., January, 1913

Winning four firsts, two seconds, one third, two fifths and all shape and color specials and as many points for best display as all of our competitors combined; in the largest class of Buff Rocks ever shown at the Garden and our winning birds were pronounced to be the finest ever shown at the Garden. If you are interested in one of the most beautiful and profitable fowls that is bred get our catalogue and mating list, in regard to our stock, eggs and baby chicks, we have to offer you. We are the largest breeders of high class Buff Rocks in the world.

## CAMPINES AND WHITE FAVEROLLES

## BUFF, WHITE, BLUE ORPINGTONS

These yards have now earned a world-wide reputation as one of the finest stock breeding yards in existence. For some time past United States of America, Canada, South America, South Africa and Australia have been drawing a considerable quantity of valuable breeding stock from my pens each year and recently many of the leading governments abroad have written to inquire for stock for the government farms.

My Campine and White Faverolle studs will rank as my Orpington studs have done during past years among the very first, for I handle nothing but the very finest quality whatever I take up and do not expect or breed inferior stock. My yards always open to visitors and which are visited now by fanciers all over the world are the finest advertisement I hold in this country, and the fact that for the past five years my stud has made a record untouched by any other in cups and honors at the Dairy, Palace and Club Shows. Stock birds, \$5, \$10, \$15, \$25 and \$60. Trios and pens, \$35, \$60 and \$100. Eggs, \$5, \$10 and \$15 per fifteen; infertile replaced.

**Agents Wanted**—I am prepared to rear large quantities of stock in any of these new varieties and deliver from July onwards.

bers and a nice lot with rare condition. The pens a strong lot.

The Goldenes were close up in quality, but lacked in numbers.

#### Anconas.

The Anconas were a pleasant surprise in numbers and quality, with 101 birds seen. All classes in both Single and Rose Combs were well filled, with the winning cocks and cockerels birds of great merit. The females were well shown, with grand shape and well carried bodies and tails. The second cockerel a bird of splendid shape and remarkable color, with nice wing and the best of style.

#### Black Minorcas.

A class of unusual quality and beauty. The males all seen at their best, nice heads, the best of form and fine carriage. Females all that we could hope for, a dandy collection.

In Rose Comb the exhibit was also surprising; birds of the very best were found in all the classes; color and shape

on an equality with the Single Comb variety.

Blue Andalusians and Black Spanish were good classes with many fine birds seen in both varieties.

Houdans, strong in numbers and of a high class; birds well shown and of splendid shape and size.

Hamburgs and Polish, small classes. Faverolles in several varieties were shown here.

Lakenfelders, a good-sized class of fine birds.

Cornish Games, a quality class with many birds of highest merit seen here; markings and type at their best.

Standard Games were great and strong classes, and in Pit Games birds of all colors and quality were seen.

In ducks the largest classes were of the Indian Runner kind; of these beauty classes were displayed.

The Bronze turkeys were a show all in themselves. In size and in rich quality they were most attractive.

ture and we hope to later give a complete report on this.

#### The Exhibitors and Their Birds.

Barred Plymouth Rocks were a large class well displayed. Many birds of exceptional quality were seen and it was fine picking in each class for the winners. The Yama Farms, Napanock, N. Y., made a great record here, and with a quality good to see. Mr. Newton Cosh was in charge, a happy man. Their winnings were: Cocks, 1st and 2d; hens, 1st and 4th; cockerels, 1st and 4th; pullets, 2d and 3d; and pen, 1st. Their winning cock was a wonder in condition and form and of very even surface and grand under barring. With nice head and standing well, he was a most attractive fellow. Second, up close and a quality bird. Cockerel 1st a very clean and sharp barred bird with fine shape and in best condition. First hen a beauty of sound color and wins color special. Their winning pen a choice collection of quality, the male a real beauty with everything desired, the females well mated and of the soundest and best of color and barring.

The Yama Farms also made an exhibit of their S. C. Black Minorcas, making a wonderful record in a great class of quality birds. In these also their beauty quality was seen to advantage in the best possible condition. Type and sound color a feature, followed by very fine head points. In this class they won: Cocks, 1st and 2d; hens, 2d and 3d; cockerels, 1st, 2d and 3d; pullets, 1st, 2d and 3d; pen, 1st. Every one of these birds are most worthy. They bear out the great reputation this line has made at New York and elsewhere, and it was a delight to see them here.

Mr. L. B. Resseque, Millers, N. Y., made a strong exhibit in the Barred Rock classes with a very choice line of birds of highest merit. His winnings were: Cock, 3d; cockerel, 2d and 3d; pullet, 4th; pen, 2d. He also won shape special in male and female. His second cockerel winning the shape special was a model in form and in general condition, with nice head, etc., standing up well. Third cockerel a large youngster with unfinished wing, will make one of the very best, a bird of great promise and the best of color and barring. Fourth pullet not at her best here, but one full of character and the right bar-

## Buffalo International Poultry Show

The Exhibit a Great Success and of Value  
to the Poultry Industry *By H. P. Schwab*

**B**UFFALO has added another ring to its fame as an exhibition city, for it certainly did itself proud during Poultry Show week. The mammoth Auditorium was daily packed from noon to late in the evening with people from near and far to inspect what the friends of the International had on display for them.

The exhibit was a beauty, complete in all departments, and the visiting public feasted their eyes on this lovely display with wonder. Classes were in about all varieties. There were 1,229 single entries in poultry and 1,110 birds in pens. Bantams, 168; water fowl, turkeys, etc., 280 birds; pigeons, 1,169; pet stock, 173, and canarys, 184, making a grand total of 4,313 birds shown by 369 exhibitors.

Buffalo may have had larger shows—that we don't know of—but we feel safe in saying they never had a better balanced exhibit with greater general quality or anywhere near the attendance that this one enjoyed.

The display made by the J. N. Adam Co. in the center of the hall proved a drawing card and brought hundreds to the hall that would not have been there under ordinary conditions. They came to see styles and while there also enjoyed the poultry display and no doubt will interest many of them in better poultry.

Mr. Geo. Urban, Jr., gave his usual banquet to his friends and the judges and all had a joyous time. A parody on the waiters' strike was pulled off with great success, with his good man Hermann taking a leading part.

In this great show Dr. Merkley did himself proud. He is a hustler of unusual ability and knows the demands of a good show. He was ably assisted by all the officers and members of the association and the show was pulled off as smooth as any we have ever seen. The awards went up promptly and the marked catalogue was out in record time. The laying contest was a fea-

## AGAIN VICTORS

### SCRANTON'S S. C. RHODE ISLAND REDS

At LOUISVILLE, KY., against the best REDS of the South, won 1, 2, 3, 4, 5 cockerel; 2, 3, 4, 5 cock; 2, 5 hen; 2, 4, 5 pullet; 1 and 2 old pen; 1 and 3 young pen. \$75.00 Cup for Best Display in show—144 points.

Remember they made the GREATEST WIN at CHICAGO last season that has ever been made in that show by one breeder of Reds—FIVE FIRST PRIZES and ALL SPECIALS, besides many minor prizes.

At Hagerstown, Md., in October they also made a remarkable record. These, with their UNEQUALLED records of past years, stamp them as the LEADING STRAIN of Reds of the present day.

Why do they win? Because they have been carefully line bred for years and have established BLOOD LINES that will REPRODUCE. My matings this season are better than ever before. If you want to know more about them send for a catalogue of matings today. It will be mailed free.

**B. H. SCRANTON** -- **BOX 350** -- **RISEING SUN, INDIANA**

ring. Third cock a beauty in form, but just passed his best. Nice head.

Mr. Resseque also breeds S. C. Brown Leghorns and in these is one of the leaders, having this season made a beauty record at the great Madison Square Garden, New York, show. Here he won in a strong class: Cock, 1st; hen, 1st and 4th; cockerel, 5th; pullet, 1st, 2d and 3d; pen, 1st. The winning cock was a feature of the show, with fine form and size and the best of markings and color. In pullets he made a sweep of record on three of the best we have seen to date. They were in beauty condition and worthy of all they won. In both Rocks and Leghorns he won several special prizes.

First prize Barred Rock pullet went to Mr. John B. Weig, 179 Eaton street, Buffalo, N. Y. He also won 5th cock. The winning pullet was one of extreme quality and beauty in both color and barring. Her bars were of equal width, the white bar pure and clear. Shape very fine and in superb condition. Mr.

Weig has been known as a breeder for some years and has bred many rich winners. This year he also won at the great Rochester show. He is a careful breeder, aiming high for the best and sure to succeed. That quality is bound to win.

White Rocks were another great class, and one of the best at the show in general quality. Buffalo has always had good classes of White Rocks, and this was no exception, for it was rich in all departments. Mr. J. L. Brown, Seaforth, Ont., fresh from his great win at the "Ontario," came and made a far greater record than ever before. This line is one of special merit. They are birds of size and proper shape with pure white color. His winnings here are: Cock, 1st; hen, 1st and 3d; cockerel, 1st and 4th; pullet, 1st and 5th; and pen, 1st. This in a class of 79 birds and winning all specials. Mr. Brown had his birds in the best of condition and such quality has the right to win.

Mr. G. M. Severhill, Buffalo, N. Y., won: Cockerel, 2d; pullet, 2d; and pen, 3d. This line has been winning here for years.

Mr. F. W. Peters, Erie, Pa., another of the old time breeders and winners, won: Cock, 2d; hens, 2d and 5th; and pullets, 3d and 4th.

Mr. Philip Landel, L. G. Brown and C. M. Schreiber were also in the winning.

Buff Rocks were a very fine class of 65 birds, well shown and of a very superior quality, Mr. L. F. Powell, Nunda, N. Y., winning very strong in all classes and including four first prizes. Both the first prize cock and cockerel were exceptionally fine birds of every quality.

Columbian Rocks were a quality class of many good birds. Here Mr. Lew H. Bowman, East Aurora, N. Y., made a record of note by winning in all classes first, second and third, and we think the winning record of the show. His winning males were grand birds, well

# FRENCH'S POULTRY MUSTARD

Patent Applied For  
ABSOLUTELY PURE

WE SINCERELY regret being obliged to call your attention to the fact that certain unscrupulous supply houses, taking advantage of the demand that has been created for FRENCH'S POULTRY MUSTARD, have been substituting cheap and inferior Mustard products where the poultry fancier has only asked for "Poultry Mustard" or "Mustard for Chickens."

We have seen samples of some of these articles and they possess practically no value at all. FRENCH'S POULTRY MUSTARD is a scientifically manufactured article, containing the flours of different Mustard seeds, so blended as to produce the greatest strength in the volatile principle that is desired, and that is required to produce the fortunate results arrived at by Mr. Allen.

In asking for Mustard for this purpose, ask for FRENCH'S POULTRY MUSTARD. See that you GET French's Poultry Mustard. The name "FRENCH'S" will protect you and in the future French's Poultry Mustard will only be sold in original packages, under unbroken seal. Shipments in barrels and in 100-lb. packages will be shipped direct from the factory. All other packages will have our name and the seal unbroken.

Do not accept Bulk Mustard, and see that our label is unbroken.

Experiments were successfully made in England in 1909, 1910 and 1911 to stimulate egg production, increase vigor and fertility of fowls by the use of mustard. Send us your name and address and we will send you free of charge a copy of a pamphlet as edited by Mr. Ralph Allen, of Herts, England, the conductor of the experiments. The book contains a full account of the experiments extending over the years named, together with a number of testimonials of prominent American users of French's Poultry Mustard. The first issue of 20,000 copies was entirely exhausted within eight weeks of our first advertisement. The second issue is on the press, and contains added testimonials, and will be sent free on application.

French's Poultry Mustard is used and recommended by Edward Corning of the "Corning Egg Farm," Bound Brook, N. J., by "Corning himself," E. B. Thompson "Ringlets," Amenia, N. Y., The Urban Farms, Buffalo, N. Y., Grove Hill Poultry Yards, Waltham, Mass., Haldie Nicholson, Leominster, Mass., and by a great majority of the prominent breeders, and is sure to be used by all. The great egg farms use it regularly, pronouncing it invaluable.

We are adding dealers daily. If your dealer does not handle it, send us his name.

French's Poultry Mustard is an actual improvement upon the mustard used in England during these experiments. One teaspoonful of French's Poultry Mustard for every six fowls is the right amount. Mix it with the dry meal first and then add water until in a crumbly consistency. For Dry

Mash use 1 pound French's Poultry Mustard to 200 to 500 pounds of feed.

Mix with a small amount first then with the entire lot. French's Poultry Mustard can be obtained of any dealer for 20c per pound in 6 and 10-pound boxes, 25-pound kegs, or a sample package of 1½-pound can be had for 35c. If your dealer does not have it, write the R. T. French Co., mustard makers, Rochester, N. Y.

"MUSTARD'S EFFICACY FOR INCREASED EGG PRODUCTION, FERTILITY AND STAMINA IS INDISPUTABLE"

THE R. T. FRENCH CO., DEPT. A, ROCHESTER, N. Y.

shown, and his first pullet one of the best we have seen. Mr. Bowan has won well this season and has a worthy line of stock.

Wyandottes were a strong class all through with the Whites leading in numbers with 151 entered. The winners were a prime lot, well shown, and of the best of quality, with splendid type a feature.

Silver Wyandottes, although a small class, was a good one, with Mr. Vincent Roth winning first in all the classes.

Columbian also small in numbers, but many fine birds seen. Miss E. M. H. Schillings' winning hens were among the very best.

The honors in the S. C. Reds were strongly contested by several well known breeders in a great class of quality. Here were birds of the highest merit in all classes and shown in wonderful condition. Mr. H. W. Alt, 87 Fuller street, Buffalo, N. Y., made a grand winning by taking a leading place in each class, as follows: Cock, 4th; hen, 1st; cockerel, 1st; pullets, 1st and 3d; and 1st and 2d pens, with all specials. His winning cockerel was a wonder in color and of great evenness, under very fine. In form all that we could desire. First hen one of beauty and value, in best condition. Both his winning pens marvels in mating and rich color and markings. Mr. Alt has won here before and has a splendid record back of him and his line of birds.

In R. C. Reds the leading honors went to another worthy Buffalo breeder, Mr. C. E. Riley, 431 Fargo avenue, Buffalo, N. Y. Mr. Riley has also been a breeder of Reds for many years and has made several fine winnings at hot shows and great classes, but his win here this year is no doubt his best, for it was made in a wonderfully strong class of birds, shown at their best. Here he won in a class of 75 birds: Cock, 1st and 4th; hens, 2d and 5th; cockerel, 1st and 3d; pullet, 1st; and pen, 2d. Both his winning cock and cockerel were of the best in all-around quality, rich and even in color, with grand form and nice heads. First pullet a gem in every way.

#### The Banner Class.

The S. C. White Leghorns, with 189 birds in line, were the banner class of the show, one on a par with any ever brought out. The Skylands Farm, Ster-

lington, N. Y., made the exceptional record of winning every prize offered from first to fifth in every one of the single classes, and first and second in pens. To win first, second, third, fourth and fifth in all classes of cock, hen, cockerel and pullet, along with first and second pens, with but two pens shown, is a record we did not think it possible for any breeder to make. It speaks in the very highest terms of this line and of Mr. Harlo J. Fiske. This line has also won at New York and Boston and has many other records of value back of it.

Their winning cockerel also won the grand sweepstake special for best bird in the show. To our mind he was a model in type and finished in condition. His dandy head, with beautiful back and low, but very full tail, made him the wonder he was and a great winner in a great class.

Anconas were a fine class of 138 birds, being one of the largest at the show. Quality was in every class and they received special attention from the breeders and public alike. Campines were a rather small class, but we can excuse this, as they have been out in force all season and at all the shows in good numbers. The breeders were here for a meeting of their Standard committee and were a busy set of men.

The Cornish Indian class was one of beauty and of good numbers, there being 55 birds shown. The five winning cocks and cockerels were certainly very fine birds and great winners.

Black Langshans were a good class with our old friend, Geo. H. Sweet, a leading winner. For all this he spent much of his time in Columbian Rock alley.

Judge Burgott told us the S. C. Brown Leghorns were an almighty hot class, and he ought to know. We have before told of the winnings of Mr. Resseque. Other winners here were Rev. J. G. Taylor, G. G. Henderson, Apel Bros., A. D. Cobb, Tobias Shank, etc.

#### The Orpingtons.

The Orpington classes were all very good and many exceptional birds were seen here. The Blacks numbered 59 birds.

In Buffs there were 63 birds entered with very fine buff color and good type the rule. The Fairfield Farms, Fayetteville, N. Y., won: Cock, 3d; hen,

1st; cockerel, 3d; and pens, 3d and 4th. This line has also made other records of note this year. Their winning hen is easily one of the best and a choice winner.

The Hawthorn Farm, Williamsville, N. Y., also won well here, as follows: Cock, 5th; hen, 3d; cockerel, 1st; pullet, 1st; pens, 1st and 5th. Theirs are birds of quality that will again be heard from. Such stock is bound to tell.

The White Orpingtons with 107 birds was the largest of the Orpington classes and no doubt but one of the best. Mr. Wm. Moore, Hamilton, Ont., did things here, as the following will show, by winning on cock, 1st; hens, 1st and 2d; cockerels, 1st, 2d and 3d; pullets, 3d and 5th; and pen, 1st. Mr. Moore is one of our oldest Orpington breeders in Canada and there at the "Ontario" and at the great Madison Square Garden, New York, he has been a prominent winner for many years. The winning cockerel was one of exceptional type and gives every promise for the future.

In ducks, geese and turkeys many fine specimens were seen to advantage. In these classes there were nearly 200 entries.

The displays, or big breeders' row, as it was called, had fine pens of Single and Rose Comb Reds, Orpingtons, Minorcas and Barred Rocks. The last two were made by the Yama Farms and all were very attractive.

A feature of the show was the laying contest. There were 12 pens entered, each with five females, the pens sealed and its number and record displayed above. Most of these pens made well over a 50 per cent record and some scoring way up close to the perfect mark.

Pet stock numbered 173 entries and Canaries 184. Both these classes were very interesting and well displayed.

With 1,169 pigeons entered it was one of the best classes out this year and one of the largest. The fanciers were there in droves and with Geo. Ewald to lead them there was something on every minute. They were still judging and comparing when I left for home.

The show was a beauty and kept in the best of shape all week, with interest all along and in all classes. It was a credit to all.

CHICAGO SENSATION—First Prize Pen Cock, Chicago, 1910. Pronounced by Judges the Finest Male Bird Ever Bred.

## STANDARD LINE-BRED S. C. WHITE LEGHORNS

EXCLUSIVELY

### I HAVE THE CHICAGO WINNERS

Which have swept the platter clean the last four years and have won more prizes than all other exhibitors combined. My strain in customer's hands "like Farmer and E. W. Grove" has won what few prizes I lost at Chicago, which proves that I sell you eggs and stock from my best birds. My most recent winnings were at the big Louisville, Ky., Dec. 23-28, 1912. The stronghold of the South, where I won. 1, 3, 4 cock; 1, 2, 3 hen; 1, 2, 3 cockerel; 1, 2, 5 pullet and 1 pen, in class of over 150 birds. The cream of the south. Every bird entered by me was placed.

### DON'T BE MISLED

And get your start from a bought reputation, but buy from a specialist who can prove conclusively by his winnings that he breeds the birds himself and knows the art of doing it. The Iowa, Oklahoma and Pennsylvania State Departments of Agriculture and United States Department of Agriculture are among my customers. They know where to buy the best grade of stock for demonstration and experimental purposes. No salve goes with them. They want the goods. That's why they come here. I have plenty of cockerels, hens and pullets of the best quality I ever owned or saw. Write me your wants. Inclose 10 cents in stamps or coin for the original book of information on "Parkside Strain" of S. C. White Leghorns.

THE PARKSIDE POULTRY FARM, N. P. EASLING, PROP., BOX 40, PEKIN, ILL.

## QUESTIONS AND ANSWERS

Questions will be answered in this department only when full name and address is signed by the writer.

Conducted by

Prince T. Woods, M. D.

### Balanced Rations.

Q. (1) What is the general opinion regarding balanced rations feeding by formula according to the protein and carbohydrate constituents of feed? Has it proved a success from every standpoint, providing the ration is properly balanced?

A. (1) We can hardly stand sponsor for so broad an answer as "the general opinion." Personally, we believe that there is a lot of nonsense and humbug in what some folks are pleased to call scientific accuracy in balanced rations. A ration may show by analysis a balance in chemical content that would meet the requirements of a given formula for scientific balance, yet lack in palatability, digestibility and availability to such an extent that it has no practical value as food for good results. A ration that works well under some conditions does not work as well under others. We believe that it is, for most poultry feeders, time wasted when much attention and importance is given to compounding special food formulas and "scientifically" balanced rations. No man has yet demonstrated his ability to balance the fowl's ration in ready mixed foods as well as the fowl can and will mix the foods for itself if given a chance to do so. In ready mixed foods there are a wide range of formulas which yield good results. The essentials in poultry feeding are to supply plenty of wholesome food and a variety of it and give the fowls an opportunity to do their own balancing—provide wholesome palatable foods and let the fowls do the rest.

Q. (2) What is the accepted nutritive ratio for laying hens of average weight?

A. (2) Our advice would be to "forget it," and turn your attention to something of more practical value. Doctors are still disputing over the desirable nutritive ratio of foods for human beings. "Experts" are still ar-

guing over scientific rations and nutritive ratios in poultry and animal feeding. We don't pretend to know the answer. The term "nutritive ratio" is simply a measurement of quality,—of proportionate value of principal food elements. It represents the proportion of nitrogenous to non-nitrogenous elements. So far as practical usefulness to the poultryman is concerned it has little significance. In the use of foods the animal economy has a wide range of adaptability and will accommodate itself to conditions. Appetite is the best guide in feeding. We have more confidence in the promptings of a normal stomach than in the best diet lists that have ever been drawn up. Give your fowls a variety of grains, some good meat food, plenty of succulent greens, fresh drinking water, crushed oyster shells and grit and then feed them according to appetite. If you give them plenty of food an opportunity to do their own balancing, and cater to their appetites as suggested, you will get results that will make the most expert "scientific feeder" wish he knew your secret.

Q. (3) In my location the variable winds are the southwest trade winds, blowing from June to September, almost daily, though not a cold wind. Should my open-front houses be faced directly south?

G. A. H.

Elmira, Cal.

A. (3) Face them south or enough east of south to take the wind on side at a good slant.

### Mating.

Q. Last April I started with 250 S. C. White Leghorn eggs from a good

laying strain. The pullets are now in an open-front house and laying well. I have saved three fine cockerels. Would it be all right to breed these cockerels to my pullets, using one cockerel to 12 pullets? Then how should I mate the following spring and thereafter?

Indianapolis, Ind.

H. D. S.

A. Each cockerel should be able to take care of from 20 to 25 pullets. This will give you three families to draw from for breeding and it should not be difficult to choose a plan of breeding that will avoid very close inbreeding. Our chief concern in the selection of breeders would be to choose well grown, strong, well developed, healthy specimens of both sexes. You will have so wide a range of choice in mating up the second season that you can have almost as many families as your plant will accommodate.

### Cropbound.

Q. Two of my hens have heavy crops which hang down like a bag on their breasts. They have been this way some time. They will never eat anything and act sick all of the time. They mope about the house and stay indoors. The crops are full of corn and other food.

C. J. S.

Milwaukee, Wis.

A. Probably in this case the only relief is surgical. Cut open the crop. Remove the contents carefully and thoroughly wash out the crop with warm water. Cleanse the parts well. The cut edges of crop should then be carefully sewed together with fine sterilized gut. Be sure to bring the raw outside edges closely in contact. We never waste time in treatment of crop-bound hens or those with slack crop and always sell them off to the "hen man" (collector) as soon as we find any.

### Expected More From "Utility Eggs."

Q. In a recent issue of A. P. J. I read an article about a certain breeder of poultry, who lives here in my state,

## DIRK'S RED MITE KILLER

One application kills all mites and prevents their reappearance during the season. Keeps fowls free from body lice. Make scaly legs bright and clean. Keeps lard pastry and sweets free from ants. Bedbugs give no trouble where used. Will ship one trial can to be paid for when satisfactory to user. Price—Quart, 50c; half, gallon, 85c; 1-gallon, \$1.50, or \$1 cash with order pays for one trial gallon. Booklet free.

M. E. DIRK, Box 102 : NORTH BALTIMORE OHIO

Marshall & Marshall, Distributors for Canada, Niagara Falls, Ontario

## AMERICAN EGG MACHINES

WOULD REALLY BE THE MOST FITTING NAME FOR THE "FROST-WHITE" STRAIN OF S. C. WHITE LEGHORNS

No better layers, no handsomer chickens, no more profitable breed of fowls are bred in America, than this popular strain. Think of it! Our pullets are laying at the age of 18 weeks, and often produce as high as 175 eggs per year. This explains why Leghorns are the favorite fowl on 90 per cent of the big egg farms of the country.

In 1911-12 our White Leghorns won at New York and Chicago—the two greatest poultry shows in America. At the recent Northern Indiana Show, our birds won five out of eight possible prizes. One of our cockerels also captured the Sweepstakes Champion Cup for best bird in competition with all the other varieties on exhibition. This is certain proof that the "Frost-White" Strain, in addition to being the most prolific layers, also possess the highest type exhibition quality.

Why Not Improve Your Flock with One of Our Males?—We have 200 cockerels for sale that are as fine as can be had. They have been raised from our winners. Many of them carry in their veins the blood of "Beau Brummel," the whitest and largest White Leghorn male ever bred. His sons will give quality to your flock. We must have the room for our breeding pens and will sell 100 cockerels at \$2.50 to \$20.00 each. Write and tell us what you want.

Eggs for Hatching—We have twelve pens mated for the hatching season. Every bird is "frost-white," has splendid type, vigor, stamina and the egg laying habit bred in the bone. Orders booked now. Price per setting of fifteen eggs, \$2.50 to \$10.00. Eleven chicks guaranteed.

Send for our circular. It's free. It describes all our pens.

New York, 1911

telling about his fine stock, etc. Now here is my question. Last spring I bought a sitting of 15 utility eggs from this man and paid him his price for them in addition to the express charges. Four chickens hatched from this sitting. I ordered another sitting at half price and got 7 or 8 chickens from that. These chickens were every one scrubs, healthy and vigorous enough but showed no semblance of having any more good blood in their veins than chickens from eggs that I can buy at market prices. In fact every chicken that I have on my place shows better breeding and better stock than these. I was well aware of the fact that I could not buy the best eggs for \$1.50 per sitting and I know that \$1.50 is cheap for utility eggs. I did not expect prize winners but neither did I expect scrubs. If you could see them that is what you would call them. Is this all I can expect from utility eggs and do all breeders furnish the same kind of eggs that I got, showing no good blood for utility prices? I would be pleased to have you inform me. I am not squealing because of the amount of money I spent for that was very little. M. D. R.

Indianapolis, Ind.

A. We would like to see those "scrubs" you raised from the "utility eggs." If we could see them we would then have a better idea of what you expected and what you got. Some breeders are very careless about mating up what they are pleased to call "utility pens," and these utility pens are simply the culls of the fancy flocks and

the main consideration is to get plenty of eggs to supply a demand for cheap eggs. That is not the case with breeders who are endeavoring to satisfy their customers. Utility flocks should be built up on a foundation of utility values, eggs and meat production. The flocks should run fairly uniform and show good breed characteristics in size and shape when running on range. On handling the individual birds probably quite a few of them would have what fanciers term "holes" in them, that is, they would be shy in some standard requirements that are necessary to make exhibition specimens. The color might look well in the flock but show faults on close inspection. There should be good size; with good depth of body, good breadth and length of back for the variety, good health, vigor and productivity. If we were buying "utility eggs" we would not go to a fancier for them, as in that case we would expect to get eggs from flocks of culls or cull eggs from other matings. We would buy our utility eggs from a breeder who makes a business of breeding and growing utility stock and we would consider the results the birds from such eggs gave us in growth, meat value and egg production quite as much or more than other points. Chicks from utility eggs should not be measured by fancy standards, though in many cases a big flock from utility stock will yield some fine specimens of the variety.

#### Chicken-pox.

Q. (1) The usual advice given is:

"In case of serious disease it is better to kill the sick fowl." Is chicken-pox considered a "serious disease?"

A. (1) A fowl may have chicken-pox and not be seriously ill. We believe you have misinterpreted the advice. If we are not in error, or if the printer has not mixed things up, the advice has been that in cases of serious illness (very sick fowls, too sick to respond promptly to simple treatment) it is better to kill the fowl and burn the carcass.

Q. (2) Does an apparently light attack injure a hen as a layer or breeder?

A. (2) No.

Q. (3) Is any internal treatment of benefit in chicken-pox?

A. (3) Sometimes. Obtain from your druggist a small quantity of calcium sulphide. Make it up into powders, using in each powder about what will barely cover a silver dime. Dissolve one powder in half a gallon of drinking water and allow the fowl no other drink. For local treatment cleanse the sore parts with warm soft water removing all scabs and crusts. Then apply dioxygen to the sores. When bubbling ceases wash the parts again and dry thoroughly. Then rub a little carbolated vaseline into the sores.

Q. (4) Does an attack of chicken-pox render a fowl immune to other attacks?

A. (4) No.

Q. (5) Is it possible to get rid of this disease when once established? Grounds too large to disinfect.

A. (5) Yes. The disease is caused

## Special Sale of Fine Breeding and Exhibition Stock

### BARRED PLYMOUTH ROCKS

INDIANAPOLIS, INDIANA

## THE HENDERSON STRAIN OF BARRED PLYMOUTH ROCKS

### AT CHICAGO DECEMBER 1912

In competition with the best from the yards of America's foremost breeders I won 1st and 2d cockerels, 2d cock, 2d and 3d pullets, 5th cockerel bred hen, 4th cockerel bred pullet, 3d cockerel mated pen, 3d pullet mated pen, and GRAND CHAMPION MALE OVER ALL THE BARRED ROCK MALES IN THE SHOW.

Compare my winnings at this the greatest Barred Rock show ever seen in the Mid-West with those of my competitors and YOU SET THE SEAL OF CHAMPIONSHIP ON THE HENDERSON STRAIN. Write me your wants in Barred Rocks. I can furnish anything you desire and guarantee satisfaction. My 1913 mating list describing my 30 breeding pens in both cockerel and pullet lines is now ready for distribution. Write for it.

W. W. HENDERSON 921 SECURITY BLDG. ST. LOUIS, MISSOURI  
FARM, BRIDGETON, MISSOURI..

by a parasitic fungus. The "germs" multiply in damp, mouldy or rotten litter and waste and in collections of filth or droppings. Mild damp weather with warm days and cold nights favor the development of the disease. House your birds in sanitary open-front buildings, keep them reasonably clean. Prevent accumulations that foster germ breeding.

Q. (6) Is there any connection between this disease and the so-called chicken-pox in human beings and is it contagious from one to the other?

A. (6) We do not believe so.

Q. (7) How is the contagion carried from one fowl to another, through the air, by actual contact, or may it be conveyed through the drinking water?

H. F. A.

Northboro, Mass.

A. (7) Usually by contact. Enters through scratches, abrasions, bites of insects, etc. Commonly fowl with feet fouled with filth containing germs infects soft bare parts of face, comb and wattles by scratching. Possibly may be taken into the system through infected food and water.

#### Create More Fanciers.

Q. What steps are the poultry journals taking to create new fanciers which mean new subscribers? The old fanciers are few, many have gone into the beyond since I took the old Poultry World of Hartford, Conn. I am glad H. H. Stoddard still lives and writes so many practical articles. In this city probably 800 people keep poul-

try and I think not 20 of them take a poultry journal. If the people were not interested they would not keep poultry. They buy eggs and birds of breeders of pure bred fowls. How many amateurs will show at exhibitions where comparison judging is the rule? What do they get out of it? They show to find out how good their birds are, and to show others how good they are, quite as much as to win prizes. The small shows create interest and make fanciers. New exhibitors would take more interest and get more out of the shows if explanatory score cards were given to each specimen exhibited. It would help to make fanciers. I would like to have the poultry journals offer a year's subscription to every new exhibitor at the shows but no prizes to winners. One of the old judges at Boston stated that there was a score card in the secretary's office for birds he had passed upon.

"Old Breeder."  
A. We are glad to have "Old Breeder's" suggestions. We believe we are all of us interested in having more fanciers. New fanciers are coming to the front each year and we are always glad to do our part to welcome, interest and help them. From our viewpoint the interest is steadily on the increase. While the world wags along and the light continues to burn we will have good fanciers with us and we shall always be glad to see more fanciers, better poultry and more of it.

#### Pullets Lay on Roosts.

Q. Will anything besides being over-

fat cause 10 months old pullets to lay on the roosts?

H. F.

Terre Haute, Ind.

A. Pullets "don't care a hang" where they lay eggs. They are apt to drop them wherever it happens to suit their convenience until they get well broken in as layers and have decided on a satisfactory nesting place. Do not believe that condition, or overfatness has anything to do with it. Laying while on the roost, or about the pen, or in the yard is more apt to mean nothing but carelessness on the part of the pullet. If you provide plenty of comfortable rather dark nests, and use a few nest eggs at the start, in a short time most of the pullets will use the nests. Now and then one of them won't. Some will be just "cussed" and will drop eggs any old place and leave you to run around and pick up after them. It is a good plan to do the picking up promptly to prevent breakage and temptation to egg eating. Where large numbers of fowls are kept it is not uncommon to find three or four eggs out of every hundred dropped outside of the nests. Pullets offend in this matter more often than fowls, but now and then a fowl gets careless where she deposits her egg, or else gets taken short with it when on the roost at night. Don't worry. We are glad to get the eggs no matter where they drop 'em, though we prefer them in clean nests.

#### Meat Food Questions.

Q. (1) At same cost which would be

## Andrews' White Wyandottes

**Boston Winners Again, 1913**—In strongest competition ever known, first pen, second, fourth and fifth cock, second and third hen, second cockerel. Remember, I hold the world's record of winning at Boston every year for the past sixteen years. Six first pens in the last seven years. Three first cockerels in the last four years. Four second cockerels in the last four years. A few grand breeding males left that will do you good. Send for mating list showing winners. Eggs from finest matings ever bred, \$10 per fifteen, \$18 per thirty, \$25 per forty-five. Book early.

**J. W. ANDREWS, BOX A, DIGHTON, MASSACHUSETTS**

## PEERLESS EXHIBITION S. C. W. LEGHORNS

My 1913 Mating List is now ready and will be mailed free to any address. Every fancier, egg farmer, and everyone interested or who might be interested in White Leghorns, should get in communication with me at once.

I have a proposition which affords you an opportunity to secure eggs from 20 of the grandest exhibition-laying matings ever assembled at almost your own price. This is something absolutely new that I am trying out to better establish my already famous Peerless Strain White Leghorns. You will agree that no such opportunity to get a first-class start in the premiers of all living fowl was ever offered before.

Even though you have New York or Boston winners or good layers and feel that my proposition could not possibly interest, write me anyway. Then if I cannot convince you that I can do you some good there will be no harm done.

Wish you would read the following interesting facts: The first prize bird in one of the hottest classes, if not the hottest class, of White Leghorns shown in 1912, was bred by me. The record price, \$250.00, was paid me in November, 1912, for a single cockerel. Over 500 utility Peerless White Leghorns left my yards recently to five egg farms, rated amongst the leading ones of the country. Two Peerless Pullets and one cockerel were given preference over all other American strains, although at greater cost, for special breeding purposes in Australia. At Sioux City, December, 1912, the largest strictly up-to-date show held west of Chicago in recent years, I won four 1sts; four 2nds, and three Championship cups and all Specials. REMEMBER, I DID NOT COMPETE FOR ANY PRIZES AT THE RECENT CHICAGO AND ST. LOUIS SHOWS, ALTHOUGH MY NAME APPEARS IN THE CATALOGUES. Fellow fanciers, breeders and beginners, I urge you to send for my free Mating List and Special Offer today. If you are busy a post card will do.

**LEON C. HUNTINGTON**

**BOX 12B**

**OMAHA, NEBRASKA**

the better for fowls, a pound of cooked meat or a pound or raw meat?

A. (1) We don't know. If we were sure that the meat was sound and sweet and free from parasites or disease germs we should feed it raw. If we felt in any doubt about it we should cook the meat thoroughly. There is less risk of getting fowls out of condition when feeding cooked meat than when feeding raw meat.

Q. (2) Can you give me some idea of the way beef scraps, as bought in the market, is prepared; whether cooked and dried, dried raw, or how?

A. (2) Scraps are prepared from refuse meats of various sorts and the quality of a scrap depends on what goes into the making of it as well as the method of manufacture. The waste meat and bone is thoroughly cooked

and the fats are extracted under high pressure. The remaining cake, after having the moisture dried out of it, is ground into scrap of suitable size for feeding.

Q. (3) About how much charcoal should I use in moist mash per 25 hens per week?

A. (3) None at all. Better leave the charcoal out of the mash. Keep charcoal before the fowls in a hopper and let them eat what they want of it.

Q. (4) Is it wrong to feed fat meat such as raw beef tallow to laying hens?

A. (4) No, not unless you overdo it when they are not used to it. They will take to it like a youngster to candy.

Q. (5) I have a pullet eight months old that turns her head up and sideways and sometimes so badly that her

head rests on her back with a wiggley motion. Is she worth keeping?

Devil's Lake, N. D.

L. R.

A. (5) She is not.

#### Parasitic Disease.

Q. Please give cause and treatment for fowls losing feathers on neck and heads. Also treatment for scabby legs.

Hazel Dell, Ill.

Mrs. C. K.

A. Both are caused by parasitic disease the result of becoming infested with scab mites. The use of sulphur ointment followed by thorough cleansing with soap and warm water a few days after the first application is usually effective. If the first treatment does not get rid of the pests, apply the ointment every day for three days or every other day for a week and then bathe the parts as before. Persistent treatment will cure.

#### Care of Hatching Eggs.

Q. (1) Are eggs injured for hatching if left in a temperature below freezing for several hours, if they are not cracked?

A. (1) Not necessarily. While it is not wise to expose eggs intended for hatching long to very low temperature they can and do stand a lot of chilling and still hatch. We have had good hatches from eggs taken from a lot that had been exposed to so low a temperature that some eggs on outside of case had frozen and burst open; eggs being packed in a regular market case with fillers filled up with sawdust. When temperature is 32 degrees F. or above that point we collect eggs once a day. Between 32 degrees and 15 above zero we collect eggs at noon and just before dark. 10 degrees above zero or below that point we collect eggs three or four times daily according to the severity of the cold.

Q. (2) What is a good method of keeping hatching eggs?

A. (2) Place the eggs in clean boxes without regard to position, put them in just about the way they would be found in a nest. Cover with a piece of woolen blanket to protect from drafts. Keep the boxes in a cool, clean room where the air is sweet and pure. The temperature of the room should not be below 40 degrees nor above 60 degrees.

Q. (3) How long should they be kept?

A. (3) The fresher they are when set the better the results, as a rule. They can, under favorable conditions, be kept three weeks. Do not keep them longer than you have to.

Q. (4) Is it a good plan to keep the temperature of a hot air incubator at 102½ the first week, 103 the second, and 103½ the third?

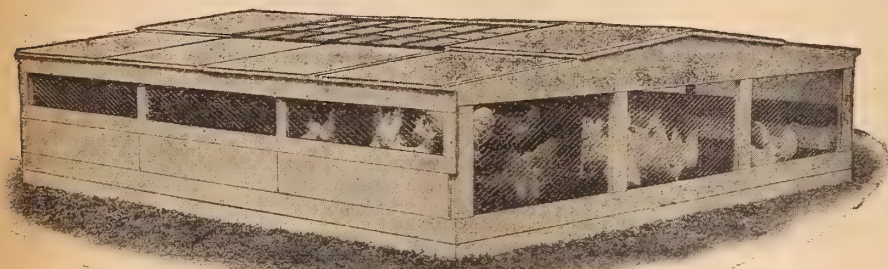

A. (4) Sometimes it is. It depends on the machine and the position of the thermometer. The best plan in incubator operation is to follow the directions given by the manufacturer. The printed directions he sends with the machine ought to tell the right temperature and the right way to run it.

Q. (5) The incubator I have has a nursery but I have heard something to the effect that the chicks in dropping from the hatching tray to the nursery were chilled by the drop in temperature and so developed bowel trouble. Please advise.

N. J.

Chicago, Ills.

A. (5) If you have confidence enough in an incubator to put your good money into it, you ought to have suffi-

## The Philo Method of Housing Poultry

**J**UST as the hatching and brooding equipment of the Philo System has been brought to the highest possible efficiency, the housings for the mature birds have been worked out on the same principles of safety and comfort; cleanliness and health. Several styles and types of coops have been perfected for various ends, all adapted to the peculiar needs of the System.

With the Philo System of housing and caring for the fowls there is never the slightest objection to keeping a few hens in the best kept yards and gardens, and it is no longer an uncommon sight to see a coop or two of laying hens, and often of baby chicks, set out on a well kept lawn and often surrounded by roses and other beautiful flowers.

The Philo Adjustable Coop is the latest and most satisfactory all-round coop for small flocks and puts poultry keeping within easy reach of any family having a small plot of ground. Price of the Adjustable Coop, complete, for six hens, \$12.00.

The Utility Coop shown above is unquestionably the best coop ever built for housing growing chicks in large numbers or mature fowls in large flocks. It is 12 feet square and 3 feet high. It affords very ample accommodation for 100 chicks from two to four months old, or from 50 to 70 mature fowls. As a laying house for large flocks, no coop has ever been placed on the market to equal it. The coop fully equipped for use in the Northern states \$40 f. o. b. Elmira. As built for the South \$35.

Other Philo Equipment includes Brooder Coops, Economy Laying and Breeding Coops, Fireless Brooders, Poultry Remedies, Feeding Troughs, Drinking Fountains, and other equipment and accessories for the well conducted poultry plant. These are described and illustrated in our book "Poultry Profits by the Philo System." This book is sent free. Send for a copy today.

## Cycle Hatcher Co.

323 North Avenue, Elmira, New York

cient confidence in the manufacturer of the machine to assume that he knows what he is about, knows how to make a good incubator and knows how to furnish printed directions that tell how to get best results. If you haven't that much confidence in the manufacturer we can't see why you parted with your money. We don't know what make of machine you have. If we had it and were in doubt, as you seem to be, we should get after the manufacturer with a few polite letters until he set our doubts at rest. In the meantime we should TRY IT and FOLLOW THE PRINTED DIRECTIONS. The nursery in such machines as we have used has never given us any trouble, except in case of one make or machine and we have been assured that the manufacturer of that machine has corrected the fault in the machines he now puts out, though we have not tried one of the new ones. Usually "bowel trouble" in very young chickens dates back to the breeding stock that laid the eggs.

#### Wry Tails and Other Deformities.

Q. What causes chickens' tails to be on one side and what treatment can I give? One of my cockerels has a knot on his back where the leg joins on and his tail hangs to one side. Will that injure him for breeding?

S. J.

St. Louis, Mo.

A. Sell the bird to the butcher. He is not fit to breed from. The wry tail comes from a deformed back in this case. Don't breed birds with wry tails or other deformities.

#### Tape Worm.

Mr. Editor: I noticed in January "Questions and Answers" a query headed "Peculiar Symptoms" from S. J. H., Utica, N. Y. As I have just completed a very successful course of treatments on a very valuable exhibition White Rock cockerel I take the liberty of addressing you, hoping that the information may be of value to S. J. H. or any other breeder who experiences the same difficulty. The symptoms of my bird were identical with those described by S. J. H., though I think my bird must have had a more severe attack. He was first taken sick during a recent show here and I was compelled to remove him from the show room before the show closed. Had the opinion of several fanciers and every one said he would die sure. Several had had similar cases, all of which proved fatal. Any way I determined to make a hard fight to save the bird. Began dosing him with castor oil, turpentine and sulphur and occasionally a drop of croton oil. He lay for three or four days with his head drawn back under his breast, his case very much resembled some spinal affection. Along with the other ailment he became crop-bound which I overcame by feeding him sharp grit and massaging crop thoroughly several times a day. About the fourth day I began giving him warm injections of ivory soap suds and was rewarded in a few hours in getting a tape worm some three or four inches long. I continued the soap and water injections twice a day for several days and he improved daily. Now he appears to be entirely recovered.

J. G. COLLINGS.

Terra Haute, Ind.

#### Electric Car and Hatching Eggs.

Q. I bought eggs for hatching at two different times and brought them

home on an electric car and I did not hatch a chick from them. I was told later than having them on an electric car killed the germ. If this is so, will you please answer in the next A. P. J. Probably eggs are often sent by electric express part of the way and information might help to better hatches.

Montgomery, Ill.

W. J. G.

A. The electric car ride the eggs had did not have anything to do with the failure to hatch. Thousands of eggs have been carried on electric cars and have hatched well after the journey. Somebody has been trying to "josh" you. Some electrobaters, fitted with electric lights, are fine hatching machines where the current can be depended upon. We ship and receive hatching eggs by trolley express right along and the eggs give fine hatches.

#### Ration for Reds.

Q. I am a new subscriber to A. P. J. and I would like to have you answer this question as I have been given so many answers, all different, that I have not time or means to try them out. What is the best grain ration for Rhode Island Red pullets? For hens? If you can give me the amounts of each kind of grain to be used and the amount to feed I would be greatly obliged. I want to get best results in egg production.

G. T.

Stoughton, Wis.

A. We don't know any best ration. We vary our feeding from time to time, according to the appetites of our birds and the preference they exhibit for certain foods and endeavor to supply them with what they want most. This plan gives a ration which shows some

## 500,000 Chicks Hatched in 400 Cycle Hatchers

WE HATCHED this number of chickens last year in our own factory, and they were sold for \$14,500.00, and shipped to nearly every State in the Union. In addition to these, several thousand were hatched for raising in our own yards. We make Cycle machines for our own use and make large profits by using them.

When a manufacturer can make large profits by using his own goods, it is the very best guarantee that others can make money by using the same goods.

Some machines are made to sell. Ours are made to use and we use them and others who will use them can make large profits just as we do. You can start our way without having a fortune to start with. Our business has been built up without any borrowed capital.

Our chickens are hatched right and are strong; that's the reason they grow and are profitable.

While first of all we are manufacturers of incubators and poultry supplies, our manufacturing is founded upon the years of practical and successful poultry keeping experience of Mr. E. W. Philo, probably the best known practical poultryman of America.

Every article of our manufacture is the result of years of study and experiment—and must prove of actual, practical value, that will make it a profitable investment before we will offer it to the buying public.

Our experimental work is done in our own poultry yards—and here we meet almost every kind of poultry problem. We have undoubtedly had many problems similar to yours, and you are offered the benefit of our experience.

Write for a free copy of poultry book and catalogue, "Poultry Profits." It will show you new possibilities in poultry keeping, for pleasure or profit.

## Cycle Hatcher Company

Main Office, 322 North Ave., Elmira, N. Y.

Or address our nearest branch office:

Chicago, Ill. Houston, Texas Des Moines, Iowa Denver, Colo. Jacksonville, Fla.  
Lake Preston, S. D. Oakland, Calif. Atlanta, Ga. Aulander, N. C.

but it yields fine results in eggs and in fertility. Our feeding formula is practically: Feed plenty of wholesome food according to appetite and give them all they want of it. At the present time we use automatic feeders for our own convenience. The fowls learn to use them readily. The ones we have are not large enough to suit us and have to be filled twice a week. We intend to put in larger feeders (40 quart size). A 40-quart feeder will supply scratch grain for 25 fowls for one week very comfortably. In addition to the scratch grain in the automatics, which work very easily when picked at by the birds, (the feeders are not exercising machines), we keep a hopper of dry mash and at times a hopper of plain beef scraps before the birds. These hoppers are simply open boxes placed on the floor. We grind and mix our grains and mashes once a week. At this time the ration is varied somewhat in proportions according to the attendant's observation of the appetites of the birds. We want them to keep their appetites keen and to eat all they want, the more they eat the better they please us. The egg yield has kept right on climbing from the start and in the very cold days of early February the egg production made steady gains. What kind of fowls do we feed? We

are feeding Rhode Island Reds, White Rocks and Buff Wyandottes, both pullets and fowls.

What do we feed? As we have said before the ration varies somewhat from time to time. The scratch grain is very largely freshly cracked yellow corn. At present writing the proportions are about as follows: Cracked corn, six buckets; red wheat, buckwheat, heavy white oats, barley and kaffir corn, each one bucket. Sometimes the proportion of corn is greater but it is seldom less. Sometimes the buckwheat, barley and kaffir are omitted and the corn, oats and wheat correspondingly increased.

Whole corn is sometimes fed at night as an extra allowance if they seem a little slow in filling up. In very cold weather the dry mash boxes may be filled with whole corn for a few days and plain beef scrap furnished in another hopper. When the appetite lags they get dry mash again in the hopper either with or without beef scraps in it. If the scrap is in the mash they do not get plain scrap in the extra hopper. If the dry mash does not contain scrap they get beef scrap plain in another hopper. The whole system of feeding is keyed on the appetite of the fowls. The first sign of losing interest in any kind of food brings a change

that increases appetite and interest. It takes heavy eating to give heavy production. The present dry mash contains about equal parts of barley, wheat, oats and buckwheat ground into a fairly fine meal, (the oats and barley hulls stay right in the mash and are always cleaned up, also the buckwheat hulls) to this fresh ground chop is added plenty of good sound yellow corn meal, about five per cent dry ground alfalfa and from twelve to fifteen per cent beef scraps. The proportions of the ground grains in the mash vary just enough to keep appetites keen for it. Corn meal is always well represented in this mash and varies from a little less than one-third to a little more than half of the whole. Gluten feed and coarse bran are also used in the dry mashes. Though since we began grinding our own grains we have fed very little bran, middlings and other millstuffs. We are well pleased with the results thus far and believe that our actual feeding cost is less, all things and results considered, now with home grinding and labor cost added, than it was when we bought all cracked grain and millstuffs at the elevator. For green food we use cabbage, vegetables and sprouted oats.

We believe that if you make good corn and oats the staple grains for feeding your Reds, give them a little

## ROSE COMB REDS

At the great Pittsburgh Poultry Exposition, January, 1913, we won in a large class 1st, 3d and 5th cock, 2d, 3d and 4th hen, 1st cockerel and 5th pullet. Grand Champion male of show. Best display, and shape and color special on male. Lester Tompkins, judge. Our Reds have also won high honors at Chicago, Boston, Cleveland and Buffalo. Eggs from these winners at \$5, \$10 and \$15 per setting, being one of the most reasonable offers ever made by a reliable breeder of Reds. We have some fine breeding males and females for sale. Don't fail to send for our mating list which describes every mating in full. It is free; send today.

SIMMONS & CRITTENDEN

GENEVA, OHIO

## "Blue Orpingtons"--"Silver Campines"

As the originator and introducer into America of Blue Orpingtons, I can offer the best breeding stock and eggs in the world of this variety. Pullets from \$15, cockerels from \$25, eggs \$15 a sitting (15 eggs). As I was judging this variety at the last Madison Square Show I could not exhibit, but in 1911 at this show I won 1st and 2nd cockerels, 1st, 3rd and 4th pullets and at the Crystal Palace, London, 1st cup and 3rd cockerel and 1st cup, 2nd and 3rd pullets. In Silver Campines, many good winners in America in season 1912-1913 were raised from pens shipped by me to America early last year, and it was freely admitted my display pen at Madison Square this year was the grandest collection of

Have a few really good breeding pens left: Pecord price. Campines ever penned in America and fetched the pullets, \$6.25; cockerels, \$7.50; stock to breed high class winners from \$12.50 pullets, \$20 cockerels. Eggs \$10.50 a sitting. Export coops free on order \$35. I shall have 1,000 Silver Campine pullets ready for shipment in October. Book your order now. I guarantee live delivery to port of landing. Export to all parts of world.

Max de Bathe, Hartley Court, Reading, England

Cables "Debathe Spencers-Wood"

variety grain from time to time to tempt their appetites, a dry mash of bran, middlings, gluten and cornmeal about equal parts by bulk and plenty of beef scraps, pay a little attention to the wants and appetites of your birds, allow plenty of green food, and feed them liberally, you will get eggs and plenty of them. Good eggs too, for only a well fed egg is a really good egg. Don't try to feed by exact rule, weight and measure. It won't work well.

#### The Corrected Standard.

Q. A short while ago I purchased for \$2.50 a copy of the American Standard of Perfection. This book on its front cover bears the inscription, "Revised and Illustrated, 1910." Now I notice in A. P. J., said book advertised showing on front cover the date "1912," indicating that the book was revised in 1912. What I would like to know is, have I been sold an old edition?

Indianapolis, Ind. B. F. S.

A. The "1912" in the cut shown in ad is probably an addition made by artist who made the cut or by the printer. Pay no attention to the wording on cover of your book. Look for the copyright, that will tell the story.

If you find on page 2 at the bottom page, opposite the "Introduction," the words "Copyright, 1912" you have the corrected and revised 1912 edition. Whenever you want to know what edition you have of any book, look for the latest copyright date on page following the title page. The dates on cover or title page may not mean anything, but Uncle Sam requires that the copyright date be correct.

#### Off-Colored Feathers in White Orpingtons.

Q. (1) Are a few partly grey or off-colored feathers in the plumage of White Orpingtons a disqualification?

A. (1) The standard says that "feathers other than white in any part of plumage" disqualify.

Q. (2) Would it be bad policy to mate a cockerel and pullets, (not related) for breeding purposes?

Fort Wayne, Ind.

F. C. L.

A. (2) If the birds are well grown and fully matured you will probably get good results.

#### Feeding Beef Scraps.—Hoppers.

Q. (1) In regard to what H. H. Stoddard has to say about balancing rations in the December A. P. J., do

you think it is advisable to give breeding stock all the beef scraps they will eat, when the main object is to get strong fertile eggs?

A. (1) It depends on the fowls and upon the quality of the scraps. Good sweet wholesome beef scraps will not hurt them if they have it before them all the time and after the first few days they will not eat too much. At first, when not used to scrap in hoppers, they may make hogs of themselves and get a little diarrhoea from overeating scraps. If they have plenty of whole corn, green food, grit and shell where they can get as much as they want of it, the disturbance from too free eating of scraps is soon over with and requires no attention on part of the attendant. We feed beef scraps plain in hoppers for a week or more and then substitute a dry mash containing about 12 to 15 per cent beef scraps and continue to alternate plain scraps and dry mash. We do this because it costs us less than where we keep beef scraps before them all the time and it gives us just as satisfactory results.

Q. (2) Which is the most satisfactory hopper to use for feeding ground food?

J. E. H.

A. (2) A shallow wooden box large

## BLACK ORPINGTONS -- J. T. ADAIR'S

"Big Four Winners"—Chicago, Indianapolis, Louisville and Cincinnati. Awarded three championships, two displays and 37 ribbons—none lower than 3d—at the above shows, and after years of effort we are at last rewarded and are now offering at Live and Let Live prices REAL Black Orpingtons. **GET BUSY! ## NOFTZGER'S PARTRIDGE PLYMOUTH ROCKS

The Partridge Plymouth Rock fowl was originated by me. They are the result of my lifetime work. Most every winning line in the world are direct descendants of my birds, proving I deliver the goods—and that I am not afraid to sell "good ones" to any breeder. Since 1909 and '10 my birds shown by me personally, have won more first prizes than those won by all competitors combined at Chicago, Indianapolis, Kansas City, Mo. State Show, Topeka, Indiana State Fair, and the Madison Square Garden New York City shows. My strain in customers' hands have won first at Boston, Buffalo, Cleveland, Cincinnati, Louisville, Atlanta, Des Moines, Omaha, Seattle, Los Angeles, St. Louis, Baltimore, Detroit, Minneapolis, Denver, Wichita, Dallas, etc. My recent record-breaking win at Chicago, Dec., 1912, when, in the largest quality class ever caged, I won 1st, 3d and 4th cock, 1st, 2d and 3d cockerel, 1st pullet, 1st pen, 3d, 4th and 5th hens, again proved my birds the best in the world. This was the only exhibit I made this season. My best birds have since been home, mated up and doing business. 350 grand birds still for sale at special low prices. Send for free folder telling about this bargain sale. Forty grand pens are mated. Eggs sell at \$5.00 per 15 and up. Every egg guaranteed to be fertile or replaced free. All stock sold guaranteed to please. Catalog free for the asking.

S. A. Noftzger, Originator of the Partridge Plymouth Rock Fowl, Oaklyn Farm, Box 38, North Manchester, Indiana

PARKWAY FARM Barton T. Fell, Owner; J. F. MacKay, Mgr. Route 10, TRENTON, N. J.

enough to carry one week's supply. For one hundred hens in one flock we use a common open box for dry mash. These boxes run about 28 in. long, 18 in. wide and 8 in. deep. For scraps we use a narrower box hopper about 34 in. long, 7 in. wide and 7 in. deep, which holds 28 quarts of beef scraps when level full. These boxes are kept on the floor where the fowls have free access to them. They sometimes get into the boxes and scratch about but they seldom soil the contents with droppings (never enough to amount to anything and always easily and quickly removed) and they do not waste food. The large boxes cost from 15 cents to 25 cents each and the smaller ones from 5 cents to 15 cents each, according to the quantity made and the material used. If 25 or more were wanted, one can save money by having them made up at a box factory.

#### Catarrhal Colds.

Q. I bought two Orpingtons which appeared all right on arrival, but in a few days were sneezing and there was running at the nostrils. They were not as heavy as they should be and were not disposed to move about. Plumage on head stands erect over the eyes. Head is not swelled. Nostrils on one are slightly enlarged and in the other are almost closed. I have tried a number of remedies without success.

Fair Haven, N. J.

A. H. D.

A. These fowls are probably subject to catarrhal colds. The one with large nostrils has probably lost a part of nose from the irritating discharges. If you have been treating them some time and they do not get better, then we would not bother with them any longer but would get rid of them. The most satisfactory treatment for colds of this sort

is to house the fowls in open front quarters. Use the head dip thoroughly when colds are first noticed and again in a few days if necessary. Any case that this treatment will not cure is not worth wasting time with. Head dip treatment is given as follows: Mix one tablespoonful of creolin (or other good cresol disinfectant) with one gallon of luke warm soft water in a galvanized iron bucket. Seize the bird by the head, hold its mouth wide open with your finger and slosh its head about in the solution a few times, but don't drown the bird. If there are any crusts on nostrils, remove them and repeat the dip. Mix the solution fresh as needed.

Do not dip too many fowls in the same solution, renew it frequently if you have many birds to dip. Keep fowls after treatment in open air quarters day and night. Fowls with

# E. B. Thompson's Imperial "Ringlet" Barred Plymouth Rocks

Win the most wonderful record beyond all precedent in Barred Rock history at the imperial and most classic show of all America---Madison Square Garden, New York---this winter of 1913. Winnings as follows:

"Ringlet" First Prize Cock at Madison Square Garden, New York, 1910-1911

First prize, second, sixth and eighth on cockerels.

First prize and sixth on pullets.

First, second and fifth on exhibition pens.

First on cockerel mated pen.

Second, third, fourth and fifth on cocks.

The imperial prize of the show, sweepstakes special for champion male.

Sweepstakes special for champion female.

Diploma presented by the American Poultry Association for best cockerel.

Sweepstakes cup for best Plymouth Rock hatched in 1912, male or female, any variety.

Challenge silver cup for best exhibition pen.

Special best shaped male.

Special best colored male.

Special best colored female.

Best cock, cockerel, hen and pullet. Four best cockerels. Four best pullets. \$25 special prize presented by the New York Show for finest display. All silver cups and cash specials. Four times

as many first prizes as any competitor. More first prizes than all competitors combined. More first, regular and special prizes than won by any exhibitor of any breed.

My exhibit of 56 birds was the best the world has ever seen. No other Barred Rock breeder has ever produced or is producing such matchless quality. Every feather in my exhibit was bred on my farm. My first prize champion cockerel and first prize champion pullet are years ahead of their time—they are the product of the highest skill.

No other Barred Rock breeder has ever accomplished the unprecedented achievement of winning the two greatest prizes in the world—sweepstakes champion male and sweepstakes champion female—at one show in Madison Square Garden.

colds will not take on, or keep up in weight although they may eat ravenously. When rid of the cold they will take on flesh rapidly.

#### Off-Color and Yellow Corn.

Q. Will feeding yellow corn cause plumage and earlobes to be creamy in color in White Leghorns?

Mt. Vernon, Iowa.

E. S. J.

A. This is a matter that has long been in dispute. We feed yellow corn heavily to both fowls and chicks (White Rocks) the year round. It does put a creamy tint into new or "green" plumage. When the fowls are confined under a roof for the greater part of the time, this creamy tint sometimes lasts in some fowls for a considerable time. When the birds are running in the open and roost in the open the creamy tint does not last after the feathers are mature of past the sappy stage. Some fowls,

those naturally very white in plumage are not affected in the least at any stage of growth of the plumage by heavy feeding on yellow corn. We do not believe that where a bird is bred white that yellow corn will put a permanent creamy tint to the plumage. As to ear lobes we doubt very much if corn affects their color in the least degree.

#### Fixing Price and Value.

Q. (1) If a person paid \$2 each for White Orpington eggs and raised the chicks to maturity and the pullets were fine specimens, what would be a fair and reasonable price to charge for eggs from these pullets?

A. (1) We don't know. It would all depend upon what was back of the fowls that produced the eggs originally and on the amount of experience and skill that was put into mating up the

birds you propose to sell eggs from. Would set the price at a figure which represents the amount you value the eggs at for use at home, a price which you decide you prefer to use the eggs for hatching yourself rather than take less for them.

Q. (2) What do you think of White Orpingtons as a breed to start with?

A. (2) The variety is an excellent one.

Q. (3) How many birds of this variety could be kept on a lot 100 feet by 50 feet using the open front house?

A. (3) One hundred comfortably.

Q. (4) Kindly explain what is meant by pullet mating and cockerel mating.

O. P. S.

Portland Mills, Penna.

A. (4) The terms are used where two separate families in one variety are necessary to produce exhibition quality specimens. Practically two

# E. B. Thompson's Imperial Ringlet Barred Plymouth Rocks

This new 1913 championship record on opposite page is the most notable of all the thrilling achievements at Madison Square Garden for which E. B. Thompson's Imperial "Ringlets" are famed. This amazing record transcends all that have gone before it and makes my unequalled record for 25 years at Madison Square Garden all the more remarkable.

Furthermore—The "Ringlets" have won every silver trophy that has ever been offered at Madison Square Garden to be won three times. In short every trophy on Barred Rocks that has ever been offered to be won three times has been finally won by me. Among them are the \$100 challenge trophy and \$100 association cups.

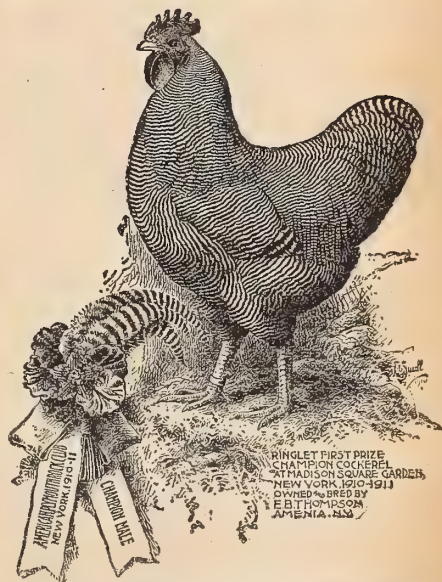

## If You Want to Win and Breed Winners

You must have my Imperial "Ringlets." It will be to your best interests to have my grand birds and eggs as a foundation and to improve your stock. The rich results of my more than thirty years as a Barred Rock breeder may be yours. My long experience has produced thousands of prize winners for myself and customers. I will help you to the best of my ability, rest assured of this.

Elegant breeding and exhibition cocks, cockerels, hens and pullets of the richest first prize New York blood for sale in any number. Show birds fit to win in any competition in any show.

Richly illustrated 70-page catalogue mailed upon request, it is full of original pictures of New York winners from life.

**Eggs** From the finest exhibition matings in the world, \$10.00 per setting; four settings, \$35.00; one hundred eggs, \$60.00.

"Ringlet" First Prize Cockerel and Champion Male at Madison Square Garden, New York, 1910-1911.

varieties in one; viz: One mating or family to produce exhibition pullets, the cockerels from this mating being pullet breeders and not exhibition specimens; another mating or family to produce exhibition cockerels, the pullets from this mating being cockerel breeders and not suitable for exhibition.

### Large Flock Brooder Stoves.

Q. (1) Have the large flock brooder stoves, such as are advertised in your journal reached a practical value?

A. (1) We believe so or we wouldn't accept the advertisement. We have not yet tried one of these brooder stoves but hope to have the opportunity to do so this season at our Experiment Station and will report on it after we have had ample time to make a thorough test. Reports from users indicate that they find them satisfactory.

Q. (2) What are the advantages, if any?

A. (2) We can tell more about that after we have tried them. Simplicity and ease in operation and handling large broods in one flock are advantages claimed.

Q. (3) Do you think that they would brood successfully in this cold climate?

Reed's Ferry, N. H.

J. F. T.

A. (3) If the house, the brooder

stove is operated in, is properly built and ventilated they ought to work as well in New Hampshire as anywhere.

### Unsatisfactory Dry Mash.

Q. I feed my pullets a dry mash made as follows:

Coarse wheat bran.....	100 lbs.
Wheat middlings .....	100 lbs.
Corn Meal .....	50 lbs.
Ground oats .....	100 lbs.
Beef scraps .....	100 lbs.
Alfalfa meal .....	100 lbs.
Linseed meal .....	40 lbs.
Table salt .....	10 lbs.

They have this mash before them all the time. It makes them very loose and what they pass is yellow and watery. Is there too much scrap or linseed meal? Will the salt hurt them?

Pawtucket, R. I. E. F. S.

A. It is a poor dry mash. The salt would not hurt them unless the beef scrap is already quite salt, (which frequently is the case). Instead of 50 pounds of corn meal, use 200 pounds. Instead of 100 pounds of alfalfa meal use 50 pounds. Cut out the linseed meal altogether. Use 5 pounds of salt only.

### "Leghorns" Without Tails.

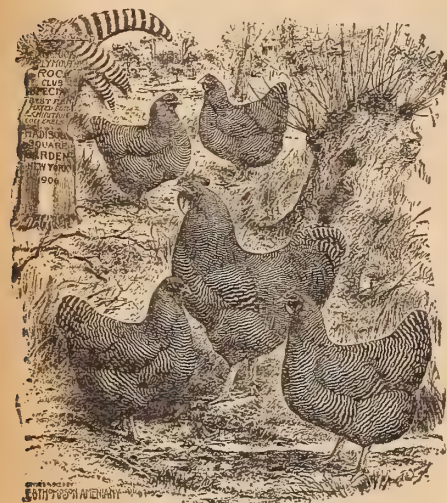

Q. A certain breeder in my locality has succeeded in perfecting a strain of White Leghorns with absolutely no

tails whatever. He claims the following points of superiority for them. The tail of the chicken being the last part to develop these pullets begin laying much earlier in life than those having tails. They also require less room on the roost than those with tails. Have such breeds been tried out and if so with what result?

L. H. N.

Hillsdale, Mich.

A. Moonshine! The "rumpless" fowls, or fowls bred without any tail or "last-piece-over-the-fence," are as old as the gentle art of poultry keeping and such tailless varieties, though they crop out from time to time, have never acquired any great hold on popularity. If they had had any great abundance of merit they would have had a strangle hold on popular favor by this time. The tale of the slow development of the tail in Leghorn pullets may interest Leghorn men, who have noted how early after leaving the shell the sprightly little rascals begin to sprout a tail. Leghorns with full standard tails lay plenty early in life and it might prove a disadvantage to have precocious little tail-less pullets beat them to it in egg production. We can't see the "less room on the roost." The Leghorn WITH appeals to our taste more than the Leghorn WITHOUT. Still, we are willing to be "from Missouri."

## E. B. Thompson's Imperial Ringlet Barred Plymouth Rocks

The Finest Birds in All America Are Here on My Farm Today  
THOUSANDS IN NUMBER

The reason for my unprecedented winning at the last 1913 Madison Square Garden, New York, Show is very evident on my farm on all sides. See pages 520 and 521 for this wonderful record.

Emerson said:—"If a man can write a better book or make a better mouse trap than his neighbor, though he build his house in the woods the world will make a beaten path to his door." The path to my farm is well trodden by prominent breeders.

I invite you to come and see my Imperial "Ringlets" at home—on their native ground. A visit here will be a revelation in the science of Barred Rock breeding; you will see buildings full of the rarest of exhibition birds, and breeders full of New York First Prize blood, grand in size and shape, great length and breadth of backs and bodies, with tails carried right; splendid heads and clear blue color, with narrow, sharp,

cleancut vivid barring to the skin. You will see my wonderful matings that will produce the champion first prize winners for next winters shows. I now have on my farm five times as many first prize Madison Square Garden males as any breeder in America.

### I Will Sell You Eggs from the Finest Matings in All the World

There Is No Strain or Line That Can Win in competition with My Best Imperial "Ringlets"

Mr. E. B. Thompson:

Dear Sir:—From the Imperial "Ringlet" eggs ordered from you last Spring I have 23 of the most healthy and well marked birds, both in shape and barring that I ever had the pleasure to lay my eyes upon. Out of the 23 birds I have exhibited 13 with the following results:

At our Williamsport show in competition with 240 Barred Rocks, I won first cockerel on two entries. At Hughesville, Pa., showing 13 birds, I won 1st, 2d and 4th on cockerels, three entries; 1st, 2d and 3d on pullets, three entries; 1st pullet bred cockerel, one entry; 1st, 2d, 3d, 4th and 5th on cockerel bred pullets, six entries.

I have sold three of the cockerels at \$25 each and have refused \$150 spot cash for my first prize Williamsport cockerel, and \$50 for the other cockerel; I also refused a very flattering offer at Hughesville for my complete line of pullets. I must acknowledge the Imperial "Ringlet" strain is positively the best I can get. You may depend on me for a very substantial order very soon.

Yours truly,

C. E. Liebensberger.

Elegant cocks, cockerels, hens and pullets of the richest New York first prize champion blood for sale and mated to produce prize winners. I will take a warm personal interest in your success.

My "Ringlets" are wonderful layers of fine eggs as well as win the blue.

Richly illustrated 70-page catalogue upon request. It is full of illustrations of New York winners from life.

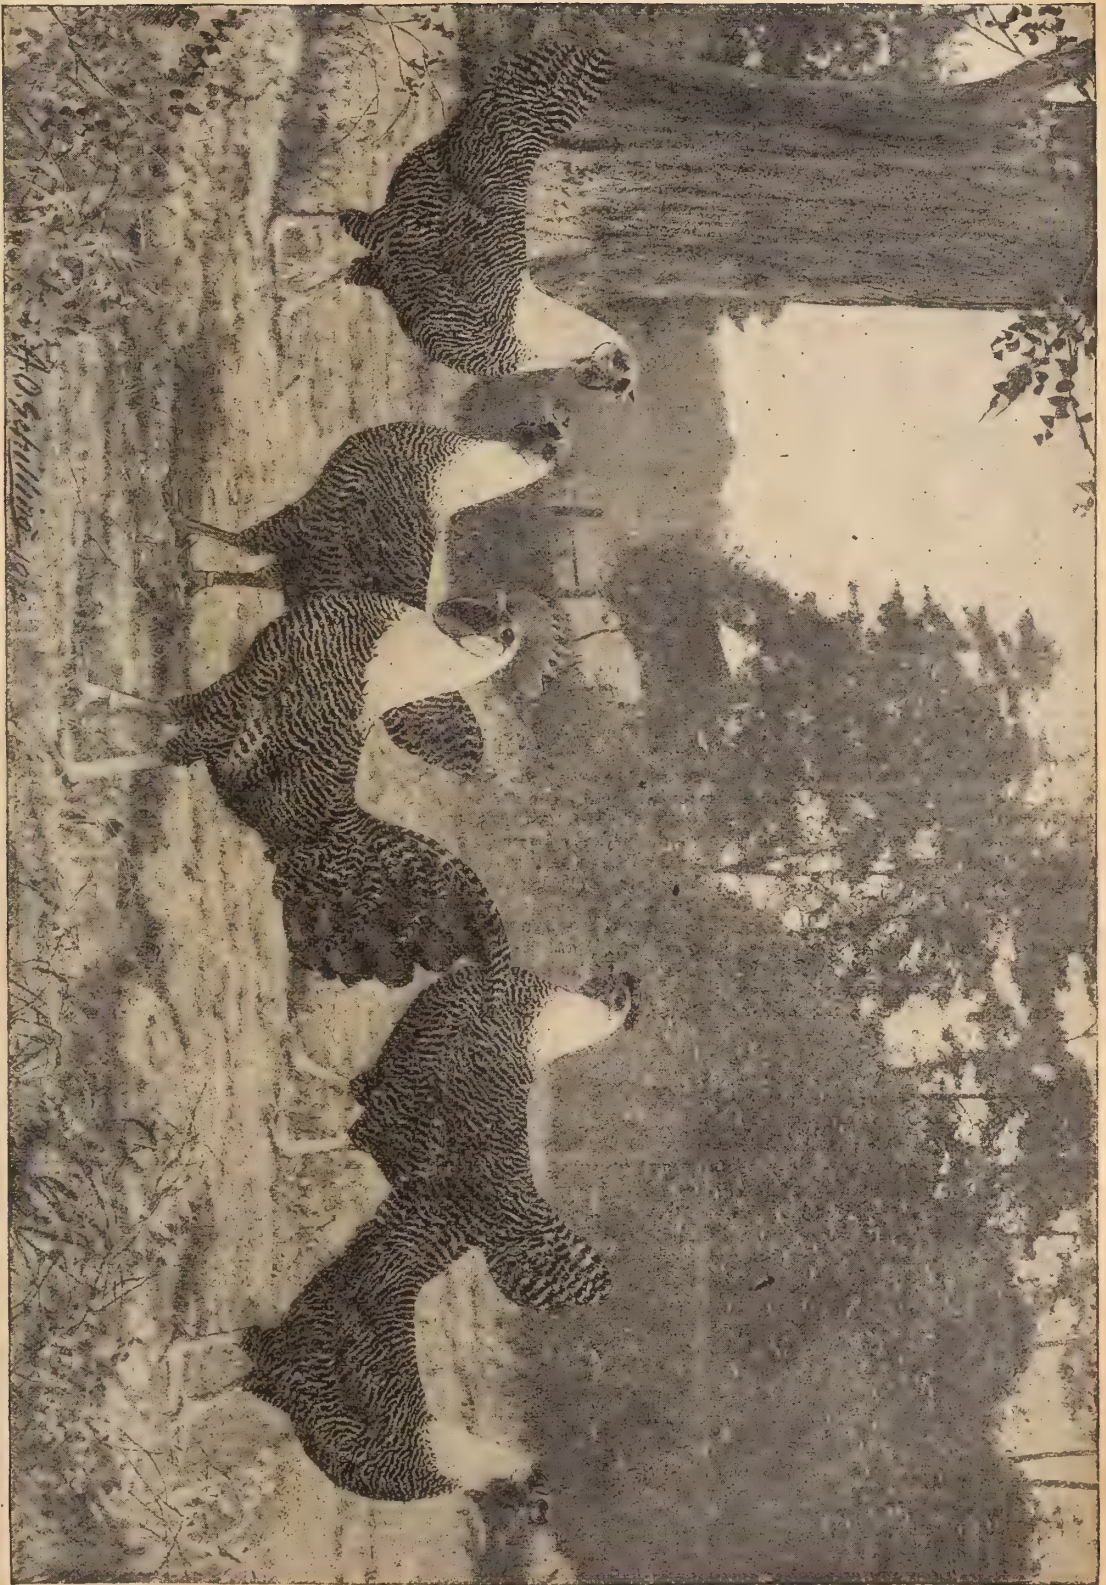

EGGS from the finest exhibition matings in all the world, \$10 per setting; four settings for \$35. One hundred eggs, \$60.

WEST NYACK N.Y.

# Poultryman's Calendar

Conducted by  
Prince T. Woods, M. D.

## March to Mid-April.

Chicken time again! Beware furred, and feathered varmints.

\* \* \*

Don't let broken feathers on backs of females between the wings, and some lost feathers on backs of heads, worry you at this season. We have had a lot of queries on this subject. It simply means activity on the part of the male birds and it is better to have mussed plumage than any lack in fertility.

\* \* \*

Examine vigorous males from time to time and note condition of spurs and toenails. Sharp points and, particularly, sharp EDGES on toenails of the males may result in torn backs in females. You can't afford to take chances of losing one of your best breeders through such injury.

\* \* \*

Breed only from healthy fowls this season. Give them fresh air all the time. Keep them well fed on abundance of wholesome food in sufficient variety to encourage appetite. Take good care of the eggs. Use common sense when incubating, whether under hens or with machines. Give the chicks the best of care. Don't crowd them. Keep them comfortable all the time. Be sure they are always well fed. Don't try to grow more chicks than you can grow properly.

\* \* \*

We believe in corn, white and yellow, and particularly good, sound, yellow corn as one of the best (if not THE BEST) grains for poultry, young and old. Nevertheless, we know that in some locali-

ties, and particularly during the chick-growing season, it is difficult to get good, sound, wholesome corn. Poor corn, spoiled corn, especially "green-heart" corn, will poison chicks. For that reason be sure that the corn you feed is sound, sweet and wholesome. You cannot afford to take the chance of feeding corn that is acid, musty, mouldy, heated or affected with "green heart." See that you get sound old corn that has been cured on the cob and cribbed under a roof in a well-aired crib.

\* \* \*

Your dealer can certify to the grade of corn he sells you if you insist on it. Genuine No. 2 and genuine No. 3 grades have not yet been found dangerously acid or affected with "green heart." Sound old corn costs more and is worth more than cheaper grades. No. 4 and No. 5 grade corn may not be affected with the poisonous green fungi, but such grades quite commonly are so poisoned and therefore unfit for feeding.

\* \* \*

Common cracked corn and corn grits (chick cracked corn), as ordinarily found in the market, frequently are made from low-grade corn and from spoiled corn and are unfit for poultry food. Cracked corn or corn meal from spoiled corn will poison and kill chicks. We feed corn freely to growing chicks when we get corn that is sound and sweet, but we crack it ourselves and feed it freshly cracked, or the meal freshly ground.

\* \* \*

When we can't get sound corn for

use in our chick foods, we use a coarse crushed chop of wheat, barley, kafir corn and oats, but we prefer to have one-half the bulk of the chick food made of sound corn if we can get it.

\* \* \*

You can make a good chick food (freshly ground as needed, and therefore better food) at home in a common grinding mill or even a coffee mill. The following proportions, by measure, will give good results: One-half yellow corn, one-fourth hard wheat, one-eighth each of heavy white oats (clipped) and best feeding barley. Oats and barley with hulls on. Grind to a coarse granular meal. Feed it in boxes or pans just as it comes from the mill, fine meal, hulls and all. When we can't get sound, sweet corn, which sometimes happens during the chick season, we use equal parts of wheat, oats, barley and kafir corn. If we have good buckwheat we include a measure of that also. Good rolled oats make an excellent addition to the chick food. Let them have all they will eat.

\* \* \*

In addition to the grain chick food, small chickens require an abundance of green food, good beef scrap and some variety food. We like a clover litter best for brooder chicks because they like it and eat a good deal of it. For raw vegetable food and live cell greens we like sprouted oats, raw potatoes, fresh-grown Dwarf Essex rape and green grass as soon as we can get it. For chicks to do well on grain and meat diet, they need a large amount of raw greens to balance it. Boiled cracked

FIRST, SECOND AND THIRD PRIZE COCKS, BOSTON 1910. OWEN FARM'S VINEYARD HAVEN, MASS. U.S.A.

rice is a good variety food and it should be cooked in water seasoned with salt. Chick grit (coarse, sharp sand will serve), fine crushed oyster shell, granulated raw bone, and charcoal are necessities and pure, fresh water is needed from the start. At first we sometimes feed hard-boiled infertile eggs with the grain ration if we happen to have them.

\* \* \*

In operating brooders, don't put in too many chicks; don't try to run it by the thermometer; the comfort of the chicks is a much better guide than a tube of mercury. Keep the hover space always warm enough so that they will have more heat than they need and can warm up quickly. If chicks spend much of the daylight under a hover there is something wrong. They should be on the go most of the time in daylight hours. At night we don't want them in out of sight; they are much more certain to be comfortable, well and happy if the hover space is sufficiently warm to drive them to the outer edge with heads peeping out from under the hover cloth.

\* \* \*

In sprouting oats for chicken food at this season don't keep them in the sprouter too long. Feed when the sprouts are short and tender. Don't let the sprouting oats get musty and mouldy. Keep your sprouter clean.

\* \* \*

Some folks will tell you that charcoal

is not essential for feeding small chicks. We don't know about that. We have raised good chicks without charcoal, but we have raised better chicks when we used charcoal. They take to it like a kitten to warm milk, and some broods can't seem to eat enough of the fine granulated charcoal. We are content to believe that Dame Nature knew her business when she provided them with an appetite for it. Chicks or fowls on range will hike for the nearest "burn" or remains of a bonfire and feed on bits of charcoal and ash with great delight. As they crave it we let them have all they want, and when we get a brood of chicks that devour charcoal along with other foods until the droppings are turned out in well-formed, dry, black stools, we know that that bunch of chicks is going to come right along and make profits for us. The chemical theory involved don't particularly interest us, but the results do, and we are willing to bank on the appetites of normal chicks and fowls all the time. "The law of chance" and the laws of certainty are most of 'em in our favor when we give a natural appetite a chance to work out its own salvation.

\* \* \*

High time now to plan the garden. When making provision for the home vegetables don't forget the poultry. Lettuce, chard, beets, turnips, green corn fodder, rape, melons, pumpkins and cabbage can all be turned to good ac-

count in poultry feeding. Don't forget, too, that small potatoes for feeding raw are well worth while. If the garden is only a small once fence it in and make the fence chicken tight. You can't raise crops and poultry on the same piece of land at the same time without having most of it go to fill the crops of the poultry. About three-fourths of our own garden truck went that way last season when the crop of chickens increased so rapidly that the overflow took possession of the garden land.

\* \* \*

Ever have a poultryman tell you that he "has to work like a dog"? The Press, Concordia, Kan., says: "You have heard people say they 'worked like a dog all day.' If this were literally true, the twenty-four hours would be spent thus: One hour digging out a rat, two hours gnawing a bone, one hour waiting for a cat to come down from a tree, half an hour begging to get into the house, and the rest of the time sleeping on a mat in front of the door, fighting flies." Now that you know what it means, don't work like a dog. Of course this Kansas summary don't take account of biting fleas. "Dave Harum" said: "A reasonable number of fleas is good for a dog; it keeps him from broodin' over bein' a dog." Better be a man and work like two men. During chicken time you need to. You can't afford to "work like a dog" in the poultry business.

## STRAIN S. C. WHITE LEGHORNS --- THE KIND THAT WIN AND LAY

Single Comb

# Rhode Island Reds

We have bred our Reds to such a point for quality that we feel that we are head and shoulders above other breeders and are going to guarantee the quality of chickens raised from the eggs sold by us. We are going to see that every man that buys eggs of us this year gets his money's worth.

We know that we have the grandest matings ever put together in Rhode Island Reds and know that we can guarantee their offspring. We guarantee the offspring from each pen in proportion to the price paid for the eggs.

**EGGS—\$5, \$10, \$15, \$20 and \$30 per 15** according to the pens they are from. Every pen of Rose Comb headed by a prize winner and nearly all of the Single Comb pens headed by prize winners and from stock that is Line bred. **High class Utility eggs at \$3.00 per 15; \$15.00 per 100.** We do not guarantee the quality of stock from these.

## Chicago, Indianapolis and New York Winners

head many of the pens. Also Springfield, Ill., the greatest Fall Fair on Earth; Nashville, Tenn., Memphis, Tenn., Atlanta, Ga., Augusta, Ga., and other big shows.

Besides our winnings we have sold birds that have won from the Atlantic to the Pacific this season—from Canada to the Gulf and in the strongest competition. In placing your order always remember there is one best place to get anything you desire to buy.

We have our pens mated for the egg trade. Book your orders for eggs from the greatest matings ever put together for this breed. Send for free mating list.

OUR BEAUTIFUL CATALOG of 64 pages and cover contains many articles on raising and caring for poultry in large and small flocks. It will also tell you why the Rhode Island Red is the best breed in the World. This catalog has cost us a great deal to prepare and is too costly to send out promiscuously. We will send this post-paid for 20 cents in cash or stamps. Address all mail to

**Buschmann-Pierce Red Farm, W. C. Pierce, Gen. Mgr., Box 39, Carmel, Ind.**

## NOTES FROM ENGLAND

CONDUCTED BY

MISS CAREY, TOYNTON RECTORY, SPILSBY, ENGLAND

### PROPOSED GREAT INTERNATIONAL FEATHERED STOCK EXHIBITION.

**D**URING THE PAST few weeks I have laid before the fancy and the country generally through the press a suggestion of a vast exhibition of feathered stock of every known breed from every country in the world to be held in one of London's great central halls during the year 1914.

The suggestion has created considerable interest and the possibility of undertaking a big enterprise of this nature without involving the fancier in too heavy financial risks is widely discussed in all the leading circles. It is hoped to at once get an advisory committee together to look into the working details of such a scheme, and if the result of inquiries show any promise of making it a success, it is more than likely that some enterprise of the kind will be held next year.

All over the world are held annually an immense number of poultry shows, in the United Kingdom alone these total to over seven hundred, so that one might safely infer that there are many thousands of poultry shows held yearly, but how many of these cater to any bird beyond poultry, pigeons and a few of the more domesticated water fowl?

The bird life of the world is at present an unexplored field of interest with millions of our teeming population, an interest almost non-existent, not because bird life holds nothing that appeals, but so seldom do we see any possibility of what might be attained exhibited before the general public. Taken as a whole, our shows are essentially run to please the fancier, the man who holds already some personal interest in the event; and in order to cater for the endless competition in single entries sent in, it would be hard to arrange conditions other than they are. These great competitive exhibitions are the life of the fancy, without which the fancy would cease to exist, and yet to the outsider who knows nothing of the mysteries of points and score cards, these endless rows and rows of birds penned all alike must often prove wearisome and monotonous. The good work, however, done by these shows is not to be depreciated in the very smallest degree, for they are, after all, what has established the fancy.

But should this be any reason why just occasionally, every few years, we should not move out of the usual rut of the poultry world and attempt an enterprise to capture the attention of the world beyond, to attract especially the wealthier circles and win their capital, interest and support in bringing to the front not only poultry and pigeons, but all the exquisite varieties of bird life, many of which one seldom sees save in rare collections, and which might well form a source of pleasure, as do dogs and cats to the hundreds and thousands of men and women, and especially women who own magnificent country estates, parks, gardens and grounds?

It is with this end in view that the proposed great collection of all kinds of feathered stock from all corners of the earth has been brought forward, not to be penned in endless rows and tiers but laid out artistically in great and smaller displays amid palms, ferns and greenery, wide alleys and walks, seats and refreshments dotted about at intervals for the visitors, and the whole arranged to give the appearance of the bird at home.

Such an enterprise, unique in the annals of the fancy, could only be in the best interest of fanciers all over the world; but to make it a success will

## ETZENSPERGER'S REDS OF QUALITY

WON AT CHICAGO, DECEMBER 12 TO 18, 1912

2d S. C. pen, fourteen pens competing; 2d cock, thirty-two birds competing; 4th pullet, thirty-eight birds competing; 5th R. C. pen, thirteen competing; 3d pullet, forty-one competing. **The hottest class of Reds ever got together.** All my old birds that produced these prize winners together with winners this year will be used in my breeding pens this year. My 1910 first Chicago cock bird is the same bird winning 2d this year, he producing some of my best winners, showing what blood lines will do. Also having ideal shape and color. Have a few cockerels, cocks and pullets for sale at the right price. **Special sale of 50 Single and Rose Comb Rhode Island Red cockerels, good breeders, at \$3.00, \$5.00 and \$10.00 each.** Mention American Poultry Journal when writing.

W. ETZENSPERGER

WILLOUGHBY, OHIO

## Golden Sheaf Buff Rocks

Won at the three following shows and all these birds and our State Fair winners will be mated in our yards this season:

Louisville, Ky., 1912—2nd, 4th cock; 1st, 3rd hen; 1st, 2nd cockerel; 3rd, 5th pullet; 1st old pen; 1st young pen.

Indianapolis, Ind., 1913—Winning \$20 silver cup for the best cock, hen, cockerel and pullet.

Cincinnati, O., 1913—1st, 2nd, 3rd, 4th and 5th cock; 1st shape special female; 2nd, 3rd, 4th and 5th hen; 1st shape and color special male; 3rd, 4th, 5th cockerel; 1st color special female; 2nd, 3rd, 4th and 5th pullet; 1st old pen; 2nd young pen; \$25 silver cup for best display of Buff Rocks; \$40 silver cup for best display of any one variety of Plymouth Rocks; \$50 silver cup for second best display of any one variety in the show. Write for our free mating list.

**Neduseb Poultry Farm, R. R. 2, Box 49, Dept. B, Sharonville, Ohio**

involve no small amount of guaranteed capital, and whether or no the support offered will be sufficient to undertake the heavy risks that would be involved has yet to be found out.

As soon as the scheme is really under way and definitely fixed it is proposed to forward notice to every government in the world likely to be interested and also to all the leading poultry, pigeon and waterfowl associations in existence and see what efforts can be made to make the display one of singular beauty and interest. Poultry will of course have the giant share. The poultry industry of the world will be the premier consideration, every breed being in evidence, all the latest and most approved methods of culture practically demonstrated: Limelight lectures are suggested to show what the fancy has done during the last decade for the feathered stock in the world and no effort will be spared that may help to make the enterprise the great-

est event in the annals of the history of the feathered world.

The international side of the enterprise is to be very prominent, and to those interested in the topic of the international Standard will come the opportunity of getting the breeds of different countries together, those bearing the same name, down side by side and seeing where the real difference lies.

Many a feathered fancier abroad hesitates to come over with his birds to the great International Palace Show held each year in the Crystal Palace, London, for fear that on account of the differences in judging the Standards, he stands no chance of winning any consequent trade. At the proposed Olympic Show he will have none of these disadvantages to face, since it is merely a matter of display, and the awards for displays, if any, will be to the best displays, each judged according to its own Standard and not

competed one against the other, judges from each country being asked to judge the displays from their respective lands.

It may, however, be thought wiser to leave out the competitive element entirely and bring the birds together solely for the interest such an exhibit is bound to create. Details, however, are at present entirely undiscussed, and as soon as the committee is formed ideas will be very welcome from the world over as to how best to inaugurate the event to give the greatest pleasure to all.

If any readers are interested or have suggestions to offer, I shall be only too pleased to get into correspondence on the subject, and guarantees of support, should the exhibition materialize, will be very welcome. Letters may be sent to Miss Carey, Toynton, Spilsby, England, who is acting in the interest of the exhibition until a committee has been appointed.

## KAUP, QUALITY BUFF ORPINGTONS

Won 75 prizes this and last season at Chicago, Indianapolis, Springfield, Birmingham, etc. I have now completed my matings for 1913 and have described them in my new catalog and mating list just out. I did not get my mating list out in December and mate my birds later—I MATED MY BIRDS FIRST AND THEN DESCRIBED THEM. It is the finest published by a Buff Orpington Specialist and is the

### BUFF ORPINGTON GUIDE BOOK

Describes twenty of the finest mated yards of Buff Orpingtons and shows absolutely how a man who is on the square all of the time can satisfy all of his customers all of the time. In addition to satisfaction, I give the greatest value for your money and PREPAY ALL EXPRESS CHARGES ON EGGS, CHICKS and EXHIBITION BIRDS ANYWHERE. Send for your copy of the BUFF ORPINGTON GUIDE NOW and you will say, "I am glad I got KAUP'S CATALOG-MATING LIST before I ordered my eggs, stock and chicks." It gives a complete description of all yards, prices and my up-to-date business methods. Send TODAY. Address

My Champion Buff Cockerel

## CHAMPION LAYING STRAIN BUFF ORPINGTONS

### Record Breakers as Winners and Layers

Read these recent victories made by my birds and you will be convinced of their grand exhibition quality.

They won at Mineola, L. I., N. Y., Sept. 1912, 1st, 4th cock; 1st, 2d, 3d hen; 1st and 4th cockerel; 2d pullet; 3d pen; Mineola Fair, special best display. Special, best cock, hen, cockerel and pullet, 103 Buff Orpingtons competing. They won at Hempstead, L. I., N. Y., 1912, 1st cockerel and color special, one color special for entire class of Buff Orpingtons. This cockerel won Silver Cup, best cockerel; Silver Cup, best Orpington in show; Silver Cup, best Buff Orpington in show, 1st, 3d, 4th and 7th hen;

4th pullet; 1st and 4th pen; Silver Cup by Hempstead Show, best display; Silver Cup by National S. C. Buff Orpington Club, best display; Silver Cup, best hen. Making in all 6 silver cups. Grand prize, Silver Medal, by American Poultry Association, for the best cockerel in the American, Asiatic, Mediterranean, English, Polish, Hamburg, French, Game and Oriental classes. Diploma by American Poultry Association, for the best males under one year in all standard varieties. Poultry Fanciers Association of Long Island, handsome diploma with gold seal and pendant ribbon, for best cockerel, hen and pen. Blue Ribbon for best dozen eggs, brown shelled; and five other specials, winning three times as many points as nearest competitor. The above remarkable winnings make my birds "Champion Prize Winners," and must convince you I have only "Quality Buff Orpingtons." But what good is a hen if she won't lay. You should be equally careful to select a "Laying Strain."

### MY STRAIN UNEQUALLED AS LAYERS

I have had pullets laying at 4 months, 19 days old, and lots of them laying before they are 5 months old. I have records of 8 pullets laying 217 eggs in 30 days. So you see my birds lay as well as win and no doubt that is the kind you want.

### MY GRAND CHAMPION MATINGS

I have 10 Grand Pens containing all the above winners and other carefully selected breeders. I have my blood lines well established and know how they breed, and I assure you stock hatched from any of my matings will please you. I have a range of prices to suit all customers. Eggs from my "Grand Champion" matings only \$15 per 15; other fine pens, \$10 and \$5 per 15. Fertility and satisfaction guaranteed. Send for my 1913 mating list containing illustrations of my prize winners and description of matings.

**I. BROOKS CLARKE : DEPT. C : NEWARK, NEW JERSEY**

A. P. A. Medal won by My Champion Cockerel

## GOOD TO KNOW

By C.W. Zimmer

The O. K. Sales Co. have taken over the exclusive selling right of Whittings Roupine, also the selling right of Puritan Chick Food. This enterprising firm have a good thing in their O. K. Poultry Litter, which is a fine substitute for straw, having wonderful absorbing qualities, much less bulky and moderate in price.

In securing the sale of Whittings Roupine and Puritan Chick Food they realized they would have two equally good products which they could put out with confidence and stand back of them. This firm would not be connected with anything that was not "O. K." which is their name and "trade mark." Their address is 160 Pearl St., Dep. 158, New York City.

The Buff Orpington duck is now becoming all the rage. There is good reasons for this because they excell all other ducks as layers and they are good size and fine eating. The demand is so great for them it exceeds the supply.

Mr. F. B. Crawford, Box 115-A,

Rahway, N. J., has a large flock of Buff Orpington ducks as well as Buff, Black and White Orpington fowls. He has just mated up twenty-six grand pens for the egg trade. His catalogue and mating list are free.

I. Brooks Clarke, Dep. C., Newark, N. J., has just completed his mating list for this year. Mr. Clark has a wonderful laying strain of Buffs and they have distinguished themselves this year by winning sweepstakes and championship prizes and silver cups galore. Anyone interested in Buff Orpingtons will do well to send for his mating list. It is well illustrated and very complete in all details.

One of the enterprising firms that always do things just as they agree to do is Grannis Bros., Route 12, Bryn Mawr Park, Yonkers, N. Y. They have just completed their 1913 mating list which is handsomely illustrated with cuts of their many prize winners and complete in every detail, giving prices

of eggs, baby chicks and stock in all of the varieties which they breed. They make quite a specialty of baby chicks and are well prepared to supply you eggs, chicks or stock in either Buffs or White Orpingtons, S. C. or R. C. Reds, White or Buff Leghorns or Indian Runner ducks, and you can rest assured you will get just what you order.

They have won two hundred and sixty prizes in eight of our largest and most prominent shows. Their stock is all reared on free range, hence strong and vigorous.

You should send for their mating list before placing an order for any of the varieties which they breed.

Grannis Bros. were formerly located at La Grangeville, N. Y., and still retain their farm there but have moved some of their birds and business office to Bryn Mawr Park, Yonkers, N. Y.

## LATEST BOOK

"Profitable Poultry." Finest published, 128 pages practical facts, 180 beautiful pictures. Tells how to breed, hatch, feed and market by latest improved methods. All about world's famous Runner Ducks and 52 other pure-bred varieties. This 50-cent book and lowest price list of cents.

Box 3-J,

Ridgefield, N. J.

## QUALITY WHITE ROCKS WIN THIS IS NOT HOT AIR

BUT THE REAL FACTS are my White Rocks WON MORE at the two great New York Shows on young birds than any other four exhibitors. At Grand Central Palace, Dec. 3 to 7, 1912, 1-5 cock; 3 hen; 1-2-4 cockerel; 1-2 pullet; 1 pen; best display; medal for best pullet in the show, any variety.

At Madison Square Garden, New York City, Dec. 30 to Jan. 4: 2d cock; 2-5-6 cockerel; 1st pullet. SPECIAL FOR BEST COCKEREL AND PULLET. This win on young birds proves my matings were right, as last season's product beat every thing that could be raised or bought, and every one of these winners were MY BREEDING PURE, as were some of the other winners at our very largest eastern shows this season. When in need of quality kind, write.

# Current News of the Poultry World

by J. F. Shureman

Members of the Nebraska State Poultry Association are urging the establishment of a poultry plant in connection with the State Agricultural Farm at Lincoln.

Funds to provide for the conducting of a crusade against the growth of disease in poultry will be asked of the state by the Pennsylvania State Poultry Association. At a meeting of the executive committee of the State Agricultural Federation this phase of the poultry situation was discussed and it was decided to ask for the money to aid in stamping out disease.

Representative Robert M. Washburn is urging legislation to increase the amount of bounty distributed by the Massachusetts State Board of Agriculture as premiums at the poultry shows of the state. The amount appropriated for this purpose at the present time is \$1,000, and Mr. Washburn would have it increased to \$2,000.

Scientific poultry breeding will hereafter be taught at the State Normal School at Harrisonburg, Va. A number of incubators and brooders are being installed and the students expect to develop an industry that will furnish eggs and chickens for the tables at the school. J. W. Kinghorne, of the Department of Agriculture at Washington, has been in Harrisonburg help-

ing to get the venture started right.

The proposal of taking moving pictures of next season's poultry show is being considered by the Minnesota Fanciers' Association, of St. Paul. It is proposed to get films of the show while in progress, picturing the crowds and general aspect of the exhibition. Prize-winning birds will be taken by the "movie" camera individually.

The Oregon State Legislature has been asked to appropriate \$12,000 for the purchase of fifty acres of land for the establishment of a poultry breeding farm to be conducted in connection with the Oregon Agricultural College.

W. O. Crane will remove his "automatic poultry farm" from Tulsa, Okla., to Lake Worth, Fla. He has been located in Tulsa for three years and has built up a big business.

A free poultry clinic has been arranged for at the Iowa State College at Ames. Special research study will be made of poultry diseases and diagnoses will be made of all diseased birds sent to the college, transportation charges to be paid by the owner.

George E. Noeth, of Rochester, N. Y., prominent Democratic politician and famed as a breeder of high-class fowls, has leased the Parkman Farm at Lyons,

N. Y., for a period of ten years. The plant will be known as the Manhattan Poultry Farm and will be managed by William H. Parkman. New buildings will be erected and other extensive improvements made. The plant will have 1,600 birds to start with, including many prize winners purchased from the former owner of the farm.

A bill is to be introduced in the Arkansas State Legislature providing that the State Commissioner of Mines, Manufactures and Agriculture also be made Commissioner of Poultry to promote the industry in that state. The bill further provides that the commissioner be empowered to appoint an expert poultryman as his assistant, who shall furnish free information to poultry breeders by means of bulletins and lectures.

The "Hen Cackle Poultry Co.," of Raleigh, N. C., has been chartered to do a general poultry business, buy, sell and mix poultry foods, to handle poultry medicines, make and sell incubators and raise poultry. The authorized capital is \$25,000.

Poultry raising is a course that is proving attractive at the University of Missouri. The first year the course was offered, three years ago, thirty-three men and six women enrolled. During the last semester there have been 124 students enrolled. Six states and fifty-

## BABY CHICKS—U. R. Fishel's White Plymouth Rocks the Best in the World

### FOXHURST CHAMPION BLACK ORPINGTONS

Win Five Firsts at Madison Square Garden, N. Y., World's Greatest Show

**A CLEAN SWEEP**—Thirty birds entered and twenty-two wore ribbons. This is the first time in the history of Black Orpington classes at the New York show that all the firsts have been won by one breeder. Our complete winnings are:

First and third cocks; first and fifth hens; first, third, fourth and fifth cockerels; first, second, third and fifth pullets; first and fourth pens. \$25.00 for best display.

Every Champion bird in our exhibit was bred and raised on our farm, to which fact we will make affidavit. The competition was the keenest ever seen in the Garden. The Crystal Palace (London, England) winners were in competition, as well as America's and Canada's best. Birds that were personally selected in England and Canada to win this show were defeated by our American bred, Foxhurst Champion Strain Orpingtons who, in addition to our 1913 record win, have been the largest winners at New York for the past five years. This unprecedented win indelibly stamps our birds as the undisputed Champions of the World. For eggs from our Champions write to headquarters for 1913 mating list; eggs, remember, from the same matings that we use ourselves. Exhibition stock at reasonable prices on hand at all times. Breeders with same blood as our Champions at from \$5.00 to \$10.00. Satisfaction and safe delivery guaranteed. Write, mentioning American Poultry Journal.

**Foxhurst Farm :: Lime Rock, Connecticut**

eight Missouri counties were represented.

A poultry census of Minnesota is being taken by the poultry department of the farm extension division at the State Agricultural College. The work will be done by the country boys and girls of the state under the direction of N. E. Chapman, poultry specialist, through the agency of the county superintendents of schools and teachers in the country districts.

John Mattison, of Elgin, has a hen that he claims has laid 183 eggs in 138 days. Her best record during this

time was nine eggs in three days! Mr. Mattison may have the belt.

A movement to bring about legislation in Texas that will make chicken stealing a felony under the law, and punishable as such, was fostered at the recent annual convention of the state branch of the American Poultry Association, held in San Antonio.

Indiana poultry fanciers are tired of showing their birds in the limited quarters in Tomlinson Hall in Indianapolis, and on the last day of the recent show of the Fanciers' Association of Indiana a committee consisting of U. R. Fishel,

newly elected president of the association, and A. B. Carter, first vice-president, went before the State Legislature and asked for an appropriation for the erection of a new and commodious coliseum in Indianapolis. The legislators were urged to visit the show and see for themselves the need of a coliseum.

A new poultry exhibition building is to be erected on the New York State Fair grounds at Syracuse during the coming year to cost \$100,000. It is claimed that this will be the most complete as well as the finest structure of its kind in the world.

MADISON SQUARE GARDEN  
NEW YORK 1913.  
FIRST PRIZE AND CHAMPION MALE  
OWNED AND BRED BY E. B. THOMPSON, AMENIA, N.Y.

"Imperial Ringlet," Barred Rock first prize cockerel and first prize pullet at Madison Square Garden, January, 1913, owned, bred and exhibited by E. B. Thompson, Amenia, N. Y. This is the first time in this breed that both champion male and champion female have ever been won by the same exhibitor at one and the same New York show.

## Origin and History of the Rhode Island Reds

By LOUIS A. STAHMER

THE RHODE ISLAND REDS are a breed made and finished by out-breeding and not inbreeding, as is usually the course in establishing a new variety of fowls. No American breed of poultry has taken a greater hold on the fanciers of this country than this valuable addition to the many different varieties of poultry already in existence.

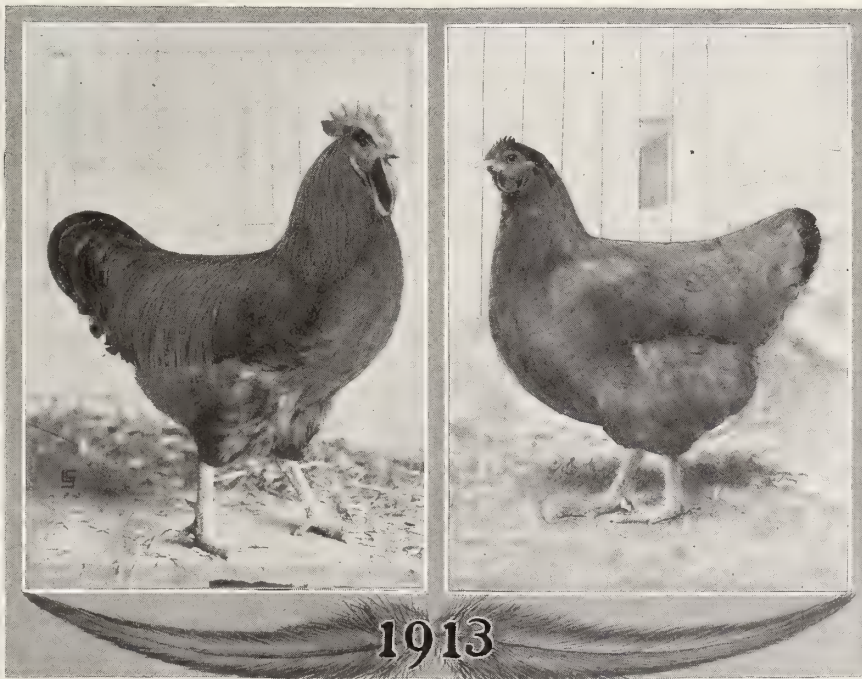

In going up and down the aisle of the show rooms, the observer is struck with the remarkable progress this breed has made in the last few years. Rhode Island Reds have always been popular from the very introduction to the American fanciers and the increased number shown at the large poultry exhibitions is conclusive proof that they have merits of beauty as well as utility.

In looking over an English publication it is amusing to note what the Britisher thinks of our breed. How is this for coming from one of the most distinguished authors in England? Under the heading of the Rhode Island Red, he says the following: "This is another American breed which should not detain us long. It has no merit as an exhibition fowl and looks more like a badly shaped Buff Orpington of too dark a color and with a black tail, and indeed resembles much some of the red brick specimens of this now popular breed when it first appeared. The Buff Cochin is its ancestor and the Brown Leghorn had also a share in its making. It is said to be a good layer, but even its utility qualities have not assisted much in making it popular." What do you think of it, you Red fanciers of America? This is not copied from an old book dated when the breed was in its infancy; it bears the year of 1911, but as there are many other good articles in the publication we dislike to mention the name. Hoping that the perpetrator of this crime against our grand breed will read this, we publish for his benefit the following article by Dr. W. B. Albridge, of Fall River, Mass., contributed by him to Red Hen Tales:

"I am not one of those who is willing to say, 'Never

mind the origin of the "Reds" or any other worthy variety of fowl.' I have been breeding poultry for twenty odd years, and I am always interested in the origin of every breed. Go back into history with me sixty years, and we find that, at that time, 1846-1850, different Asiatic breeds were introduced into this country, especially in neighborhoods that were near the coast. One variety, the Shanghai fowl (yellow and white) was introduced just after the Cochin China, and the two breeds for a time became confused, and many farmers and poulterers declare, spite of feathers or no feathers (on the legs), 'that their fowls are Cochin Chinas or Shanghais, just as they please.' At this time Bennett, in his poultry book, says: 'There are but

few, if any, bona fide Shanghai fowls now for sale.' These Shanghai fowls (Simon pure) were heavily feathered on the legs. Not so with the Cochin China. At this time the Cochin Chinas were bred extensively in southeastern Massachusetts and Rhode Island. Dr. Alfred Baylies, of Taunton, Mass., imported in July, 1846, specimens of the yellow Cochin Chinas. The cockerels were generally red. These were not specimens of what were called the Royal Cochin Chinas, as bred by the Queen of England, but direct importations. The Royal Cochin Chinas were one-third longer. The Shanghais were heavily feathered

Living specimens of Reds that approach very closely to the ideal

in the legs; these imported Cochin Chinas lightly feathered, if at all. The ship Huntress, in May, 1847, direct from Cochin China, brought a pair of this variety of fowl, and Mr. Taylor in speaking of them says: 'The imported cock was a peculiar red and yellow Dominique, and the hen a bay or reddish brown; that the young stock varied only in shade of color.' The Red Cochin China and the Red Malay cocks were selected and crossed with flocks of fowls in Little Compton forty and fifty years ago, the same as today. Later, before the Wyandotte fever, the R. C. Brown Leghorn was introduced into many flocks of fowls in the neighborhood. Even at the time of the introduction of the R. C. Brown Leghorns the red fowls were spoken of as R. C. Reds.

# Red—The Most Consistent Color in Poultry

By LOUIS A. STAHMER

**RED** IS REALLY the king of colors. Red is the color of the blood of man and beast; red is the color of domination, of passion, of love and of beauty. Red is a unique color in this, it seems to exercise a hypnotic influence not only over the mind of human beings, but also the lower form of animals. Show three apples to a baby, one green, one yellow and one a bright red, and the child will invariably select the red one. We all know and some of us perhaps have seen the effect of showing a bright red cloth to a bull in the pasture. Among fowls the turkey is excited by this color more than any other. Red plays an important part in our lives and it may be, as Professor W. Peabody Bartlett says, due to the fact that red is the color of blood, and as blood is life, the sight of it stirs both man and beast to the highest point of excitement.

Red is the strongest and most peculiar color in poultry. It is the most persistent breeding color. No other color can displace it forever from certain parts of the body of fowls and it will always reappear if no attention is paid to the breeding. This has been proven conclusively in experiments made by Darwin and Tegetmeyer. As stated before, red is one of the colors that appears most frequently in the plumage of our fowls, but it never appears alone, it is always accompanied by either black or white. No solid red fowls have ever, or will ever, be bred. The reason for this is that the ancestors of all fowls, the Bankiva Jungle

White Orpington pullet "Lady Finance," 1st and Special prize Kalamazoo. 1st and Special prize Grand Rapids, 1st and Special prize Muskegon, Mich., shows January 1913. Bred and owned by C. A. Keefer, Muskegon, Mich.

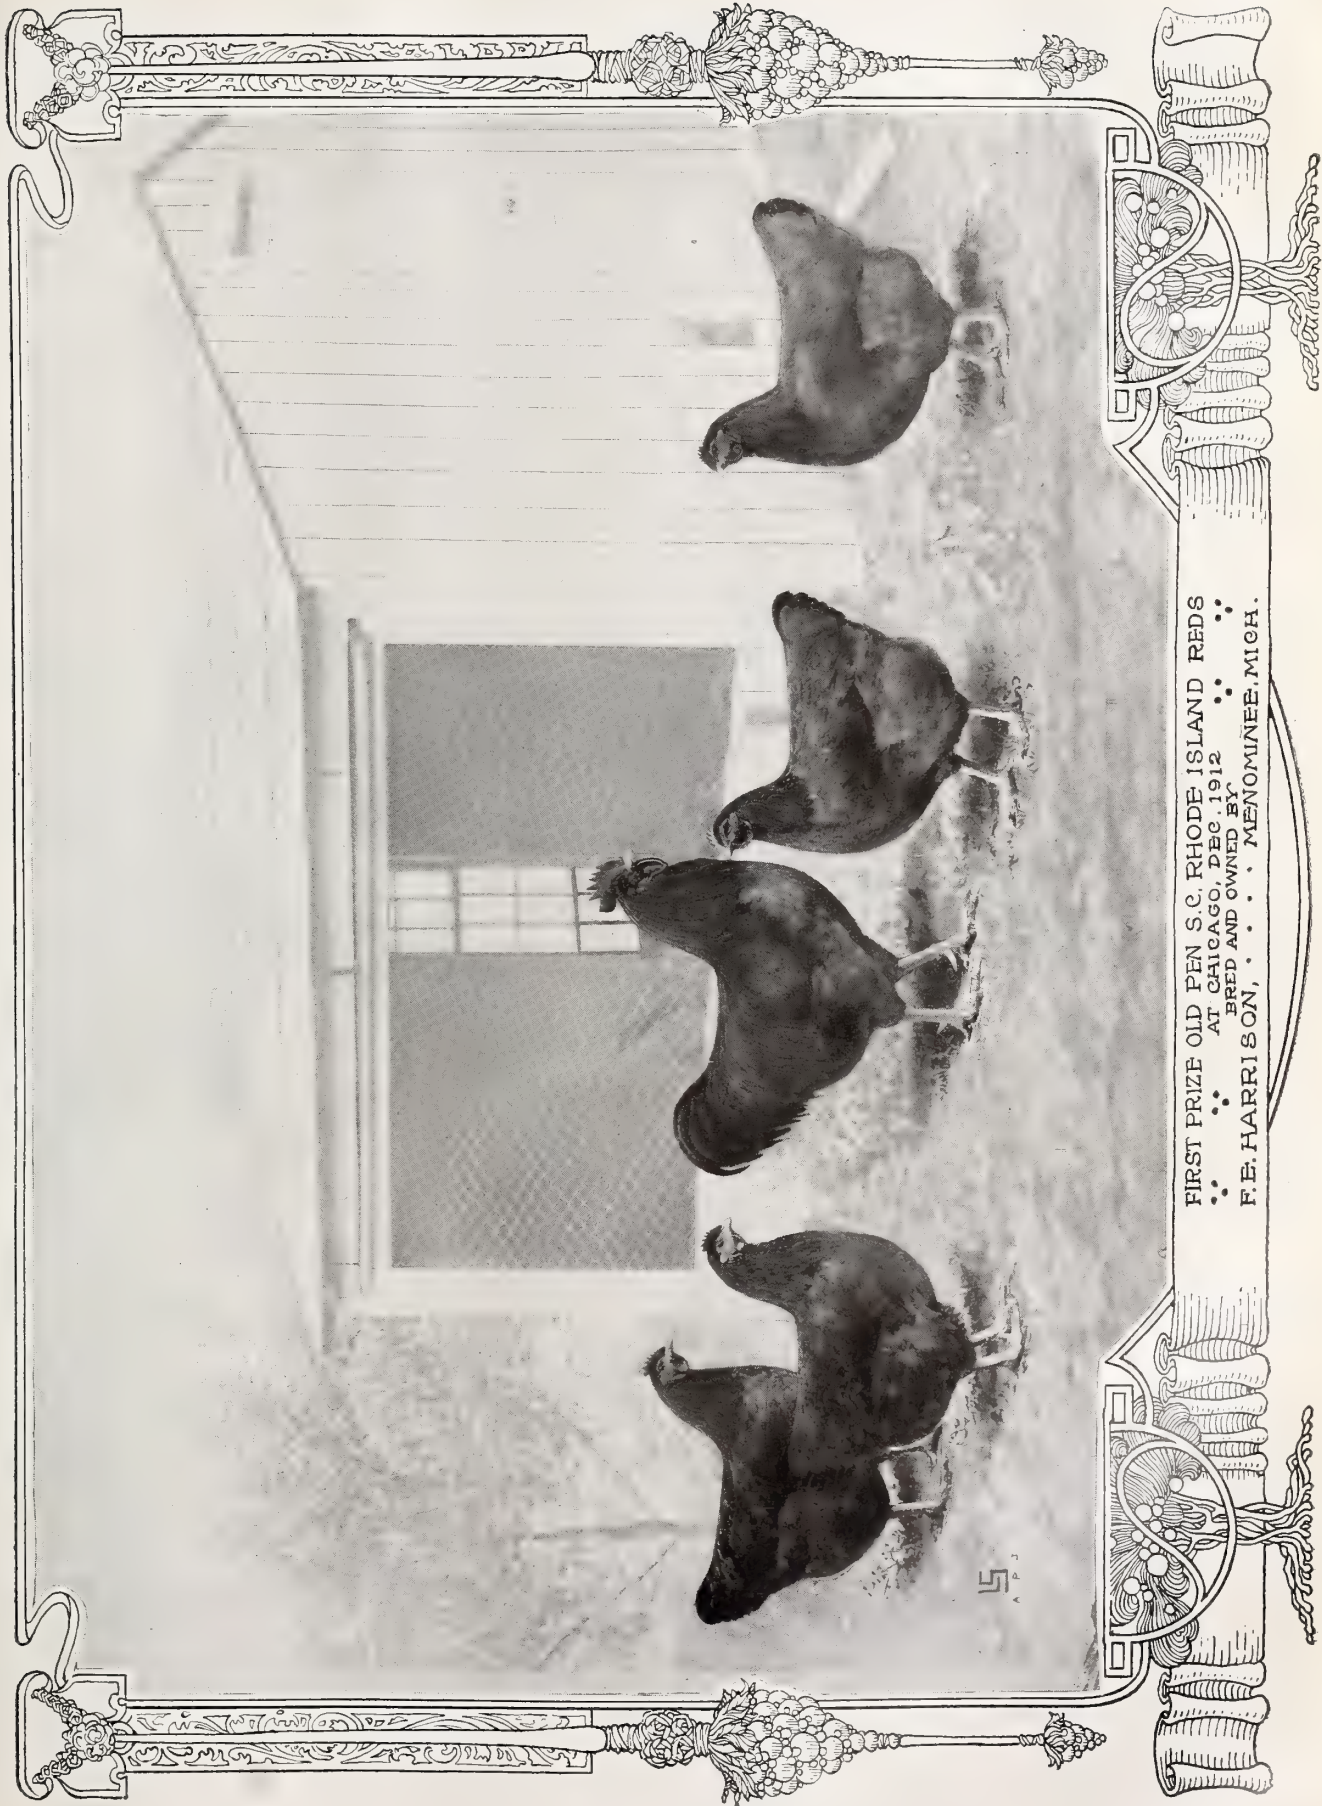

fowl, had this color only on the head, neck, back, saddle and shoulders of the male, and notwithstanding a hundred years of systematic and selective line breeding, it has not been possible to produce this color on any other part of the body than the above. Red is always accompanied or contains either black or white, and if one tries to breed out the black by crossing with white, the red will be practically unaffected. It will blend to a certain extent with the white, but it will always reappear in the original strong color if no other attempt is made to reduce the intensity by selective breeding. Red, as the poultry breeder understands the color, is not the shade of red represented in our American Beauty roses. It is more of the red that borders on deep orange approaching carmine. It can be found in a great variety of shades, from deep chestnut, on account of a certain amount of black pigment being mixed with it, to a light buff shade. Red and black are the primary colors in the poultry world. White represents the absence of color and for that reason cannot be classed. Buff, blue, salmon, yellow, gray and all other shades that appear in our fowls can be produced from the mixture of the two primary colors with white, while no mixture of the other shades or, so to say, secondary colors, can produce either red or black. The nearest approach to the solid red color fowl is the Rhode Island Red. Yet every breeder knows that the red which could really be classed under this title is found in the male alone and then only in

such respective parts of the body as it occurred originally in the jungle fowl. The red color of the hen, as well as the red color on the breast and body of the male, is merely a mixture of red, black and white. In order to make it clear to the poultry breeder that this is the case, we have prepared the accompanying series of colored charts in which we have tried to show a few different shades, which can be produced by the mixture of the two primary colors, red and black and with white. It is impossible to show all the shades which can be made. To show all the different shades possible would take more paper than has been manufactured to date. The half tones from which these colored plates are printed contained 100 lines to the inch, representing 10,000 dots to the square inch. Inasmuch as half tones have been made with the screen showing 160,000 dots to the square inch, it will be realized that it is impossible to show all the different shades which can be made by the mixture of these two colors. A glance at the illustrations will show the breeder which one of the colors is dominant. If it were possible to take the feathers of a breeding pen of fowls and analyze the pigment microscopically and ascertain the correct proportion of the different colors in each flock, it would be perhaps very easy to produce specimens of any desired shade, taking of course the laws of breeding into consideration. Many poultry breeders by years of selective and line breeding have fixed the color to a certain extent in their birds. The beginner is nearly always under the impression that he can take a dark colored bird and mate same with a light colored one and expect a lighter shade of color in the offspring such as a combination of these two colors would produce if mixed on the pallet of an artist. Not being familiar with the laws of heredity as established by Mendel, he goes on for years before obtaining the desired results.

In the charts herewith we have selected a red that borders close on to the orange shade which is generally found in the hackle and saddle feathers of the Brown Leghorn male and in many other fowls similarly colored. The effect of this color printed on the white paper is somewhat different than the same shade of red would give if viewed by transmitted light. Looking through a bottle of red ink the red as viewed by the transmitted light is of an entirely different shade than it appears when the ink is used on white paper. We are under the impression that the color pigments in the feathers of our fowls are suspended in a kind of semi-fluid matter which is absorbed during the moult and leaves the feathers in a dry condition at that time. As the colors of our fowls exhibit their greatest brilliancy during the mating season, we are somewhat inclined to think that the reproductive organs are directly responsible for the appearance of the color pigments. Experiments made by Guthrie, Castle and Davenport in transplanting the ovaries of Black and White Leghorns and also in Guinea pigs seem to bear out this statement to a certain extent. This also proves that the color of our fowls cannot be influenced by feeding, as some of our poultry fanciers believe, for if it could we would have a lot of green colored chickens running around, as grasses and vegetables contain chlorophyll, from which a harmless bright green color is made used for coloring articles of food.

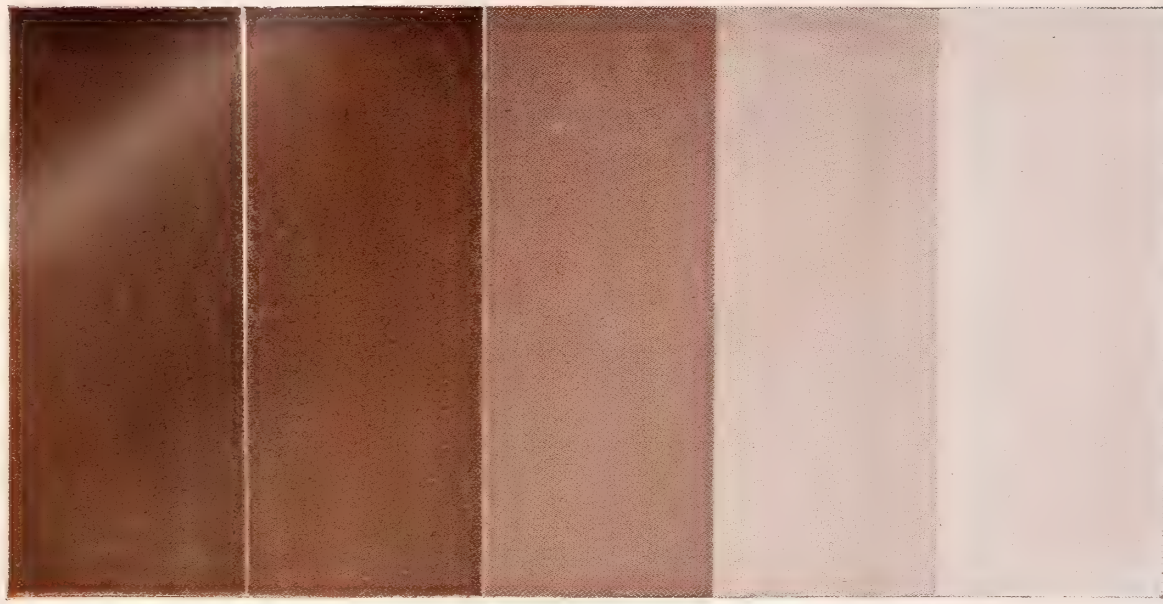

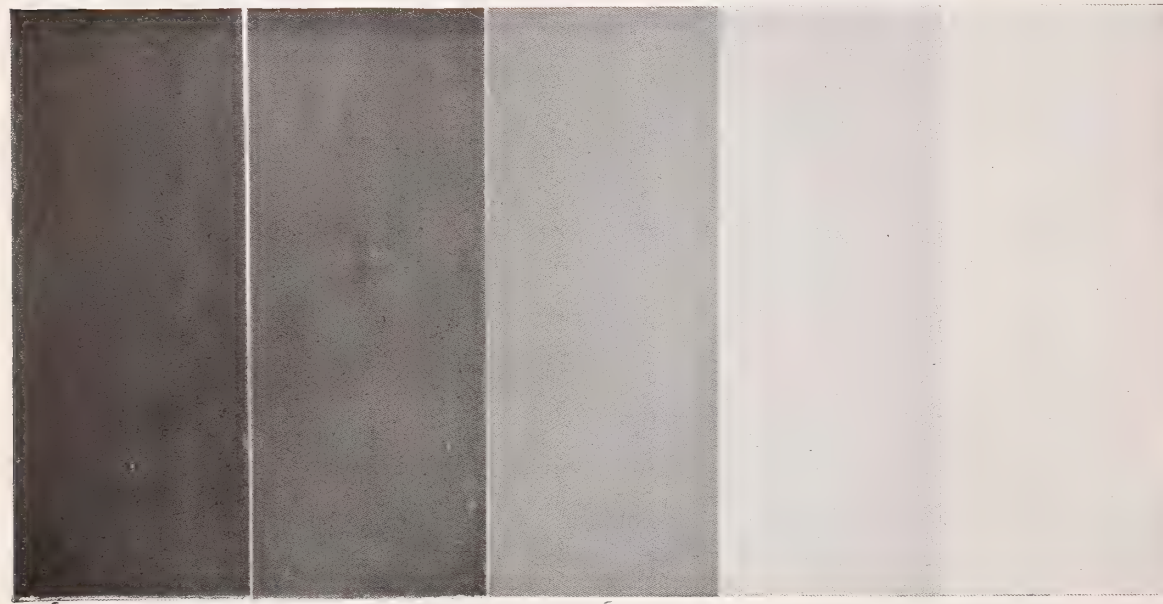

Many breeders of white plumaged birds are under the impression that feeding yellow corn to their birds will affect the color of the plumage, and for this reason feed white corn exclusively. While it is true that yellow corn will affect the color of the ear lobes of some strains of White Leghorns, we have not noticed that it affected the plumage to any extent and believe that it is characteristic of individual specimens only in whom it occurs. There are always exceptions to every rule and we would say here that perhaps such foods which contain chemical properties that act on the reproductive organs might affect the color of the plumage, as for instance wheat or rye affected with ergot. Experiments made with feeding artificially colored foods intended for influencing the color of the plumage have always failed and specimens in which it was believed that the treatment had taken effect have failed to transmit the color to their offspring and resumed the original color after moulting. During the moulting season the feathers are no longer stimulated or, so to say, nourished by the circulation of the blood, and the moisture of the pigment is absorbed and the plumage loses its brilliancy. This is especially noted in the plumage of red and buff colored fowls, which at this time present a very mottled appearance on account of some of the feathers drying up faster than others.

FIRST PRIZE OLD PEN S.C. RHODE-ISLAND REDS  
.. .. AT CHICAGO, DEC. 1912 .. ..  
BRED AND OWNED BY  
F.E. HARRISON, . . . . MENOMINEE, MICH.

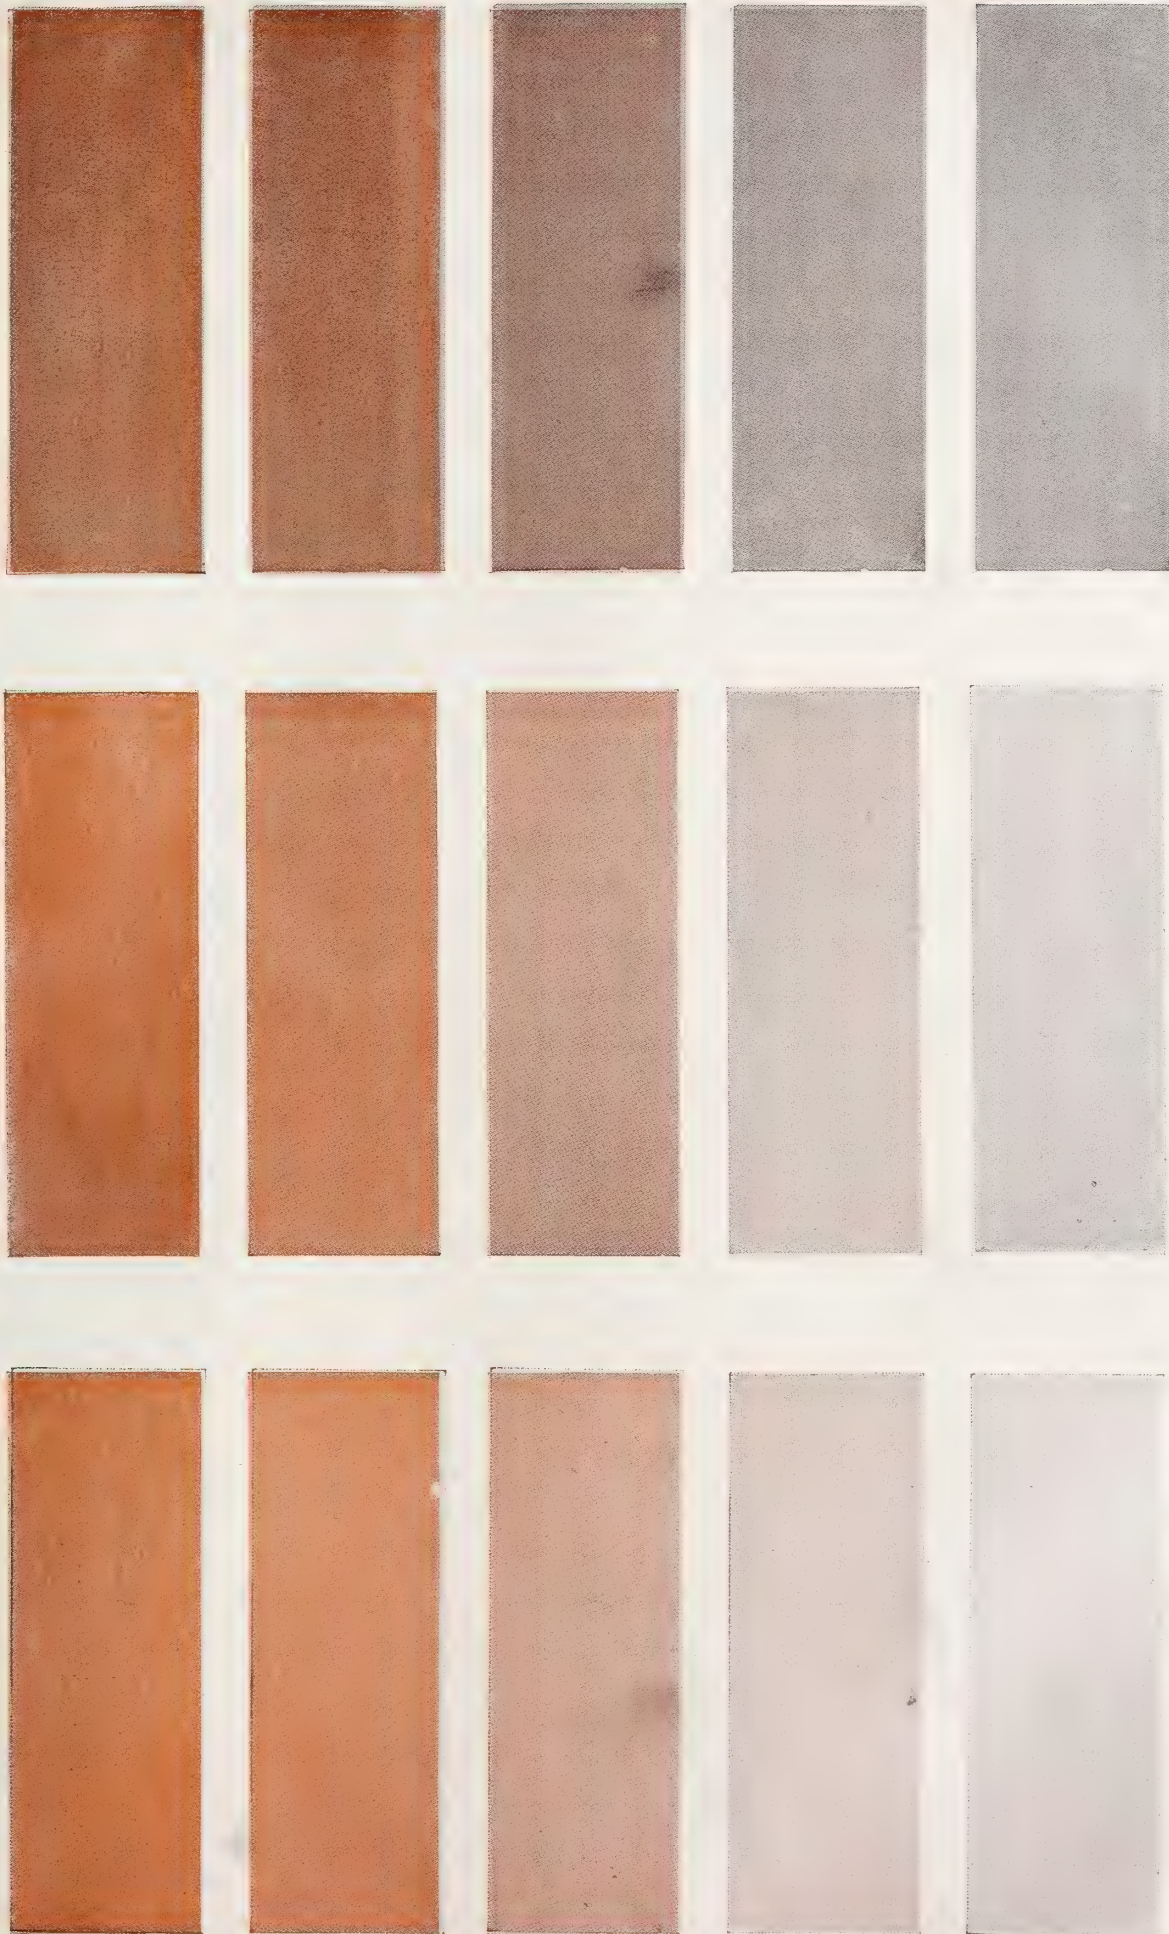

Red and black are the primary colors of our poultry. All other shades of colors appearing in our fowls can be produced from these two with a mixture of white. White represents the absence of all colors. In the plumage of our fowls it is the white semi-fluid matter which holds the pigments in suspension which produces the different shades. We are trying here to represent this fluid by the white paper and in order to obtain an equal distribution of

colors have employed a halftone screen of 100 lines to the inch, giving 10,000 dots to the square inch mixed, with 10,000 dots of white. By showing tints having these dots in different sizes we could produce an almost endless variety of different shades from these two colors and we believe that the poultry fancier will readily recognize many of the different shades found in our poultry.

It is impossible to show all the different shades that can be produced from red and black and we believe that the few tints which we show will at least give somewhat of an idea about what can be done in producing any desired shade of color in our poultry by careful line and selective breeding. In line breeding the inheritance of color and shape must always be taken

into consideration when mating up breeding pens. By this selective breeding method the colors become fixed to a certain extent in the strain, and enables the specialty breeder to produce a greater number of Standard colored birds than the breeder who mates up birds whose ancestry is unknown to him.

Shape makes the breed, color the variety. Shape, especially in White Leghorns, is the greatest asset of a flock. The above male bird, winner of the first prize cock at the late Chicago show, is without any doubt a most beautiful specimen of the breed, otherwise he could not have won in the greatest White Leghorn class that has ever been shown at Chicago. We truly believe that of the many White Leghorn males that we have photographed, this is one of the five best ones we have ever had the pleasure to handle. The pose of the bird shows the beautiful type and station and tail carriage which is so much desired in the Leghorn of today. Mr. Grove is to be congratulated on having such an excellent specimen in his breeding pen. His mating list is now ready and he sends it free. Address E. W. Grove, Jr., Route 1, Clayton, Mo.

## Good Things for Everybody

Helen F. Woods  
Editor

THE FOLLOWING LETTER from a father, a reader of this department, is of vital concern to those interested in the nation-wide public school reform movement. It shows forcibly that the question for educators and parents to consider is not one of hours in school or cramming of information, but of the opportunity for the child to satisfy his natural desire for knowledge, and the recognition of the fact that children should be dealt with individually, in so far as their natural bent in any direction is concerned:

In your department of the Oct. A. P. J. you have said what I long have thought, and what I long to read in reference to the work of the public schools. I note particularly the whole of the second paragraph and in the next paragraph, the last part about creating an AVERSION to work. Bless us all, give me a good boy to start with and from the time he is one to twenty-one, I will not give him the slightest morsel of a task, either in manual labor or study, that he isn't eager for. In fact, in the case of the only boy I ever did bring up, I never set him at any task at all of any kind. It was all elective and he the elector. And in both manual work and study he is the most constant and hardest worker I ever knew, of any age, sex,

We never have a fantasy so subtle and ethereal but that talent merely, with more resolution and faithful persistency, after a thousand failures, might fix and engrave it in distinct and enduring words, and we should see that our dreams are the solidest facts that we know.—Thoreau.

or previous condition of servitude, only there was no such previous condition and that's one reason.

Previous to the age of fifteen he went to school only about two months, as I remember it. Between that and his majority, he attended about eighteen months, I guess, at private, military and business school, and graduated. Later got a degree at the Conservatory of Music and Musical Normal School, combining qualities of quick, easy learning with working just like a veritable fiend, and later, year after year, crowding his teaching business, and continually crowding it, all the evenings and all the Sundays (directing choirs). The evenings, spent as orchestra leader in a theatre, and band instructor other evenings, and all sorts of orchestras, "sacred" and secular, juvenile and adult. Plays a dozen instruments and is a soloist on two; also vocal soloist and instructor, city supervisor of music, with private pupils on a variety of instruments to fill up all the chinks from Sunday morning to Sunday morn-

ing again. Just incessant work, work, one year after another.

He never had schooling enough to make "AVERSION" to work. Now, some people would reply that I had a good boy to start with (thanks to his mother and her race), but with another boy the result might be that he would never know anything and never do anything but just "laze around." Well then he would never amount to anything anyway, under any system of management. The probability is that unless he is feeble minded, or born terribly warped, there is something he can do, and would like to do. The public "Vocationer" must study such a case and find out; but whatever is done, such a boy is the last in the world to be ground up in the AVERSION factory, commonly called a "school." The good boy is hurt, the lad at the other extreme is hurt, and all intermediate shades and grades are hurt.

The old curriculum may have to be used a long time yet, since teachers are not in supply for a change, and the public is not ready for it. But the movement is under way. The magazines are full of it, especially the Ladies Home Journal.

In the third paragraph of your article in Oct. A. P. J., above referred to,

CHAMPION MALE OF THE SHOW, FIRST PEN COCKEREL AT NATIONAL WATER-CK MEET, SPRINGFIELD, ILL., JAN. 6-12, 1913. BRED & OWNED BY H. W. HALBACH, WATERFORD, WIS.

I note with delight your mention of the great learnability of children, only "catch them while they are young," as we used to say when we kept caged squirrels. It has been a source of surprise to me, the great capacity to "learn rapidly and quickly and without great effort."

Once I wondered at the very early attainments of Mill, the younger, while being taught by Mill, senior. Thought it must be almost entirely owing to the former being a precocious prodigy. I was a long time learning the tremendous hunger, and capacity for digestion and assimilation of the young child's mind. A single bright child will use the working hours of the round year of one teacher, if arrangements are made for it. Just one ordinary child, not a genius.

Two things you cannot (ordinarily) develop early. One is the poetical sense and the other the power of reasoning. One that can grow as fast as Jack's beanstalk, is music. Some children can sing before they can talk. Many have a fairly good perception of both time and tune at three or four, while the "ear for music" in some develops decidedly late. There is much irregularity about it. But there are so many youngsters ripe for it early that a good teacher can show off a nice little orchestra, ages five and six, a still more attractive one, ages nine to twelve, and at sixteen an actual wonder that will make the old seasoned musicians' spines stiffen and eyes glow. And this is not

only true of music but of every branch of knowledge. It may take fifty years to clear away the old debris, though much will be done in the next twenty to revolutionize the methods now in use in the schools, but let us hasten the day. The teachers may have to be born and trained. But the foundation is dissatisfaction with the old methods. When that becomes well nigh universal a way will be found to install the new. Hardly anything else can be regarded as bringing more important results than this educational reform, when it is complete.

Heredity and environment make every human action. Not a particle of any other influence has ever been proved. Now, side by side, come eugenics for the first, and school reform for the second. Not only in school itself, but out of school, in diet, exercise, hygiene, and all that sort of thing, including amazing progress in medicine, everything conspiring to better the environment. Let the good work go on. We will have a race of people to be proud of.

Now, let those who are interested in the vital question of reforming the present-day public school system read the article, "How Can the Public School Make Good?" by Ella Frances Lynch, in the February Ladies' Home Journal, which is in line with this father's methods, used so successfully with his son, twenty-five or thirty years ago.

#### Entire Wheat Bread.

Dissolve one-half yeast cake in one-half cup lukewarm water. Melt two table-

spoonfuls shortening in one cup scalded and cooled milk, and to this add one teaspoonful salt, one-fourth cup molasses, the yeast dissolved in the water and about two and one-half cups of entire wheat flour and one and one-half cups white flour. Mix well but not into a stiff dough. Cover and allow to stand in a warm place until light. Knead it down again, and place in pans until light enough to bake, when it should be placed in a quick oven, and the heat gradually reduced after the first ten minutes.

#### Oatmeal Bread.

Pour two cups boiling water over one cup Quaker Oats, and add one-half cup molasses. Allow to cool and add one teaspoon salt, one tablespoon lard or other shortening, and one-half yeast cake dissolved in one-half cup of warm water. Make stiff with white flour and rise over night. In the morning, proceed as with entire wheat bread. This makes one dozen rolls and one loaf of bread.

#### Old-Fashioned Buckwheat Cakes.

Use the best quality buckwheat flour (not prepared buckwheat flour). Dissolve one-half yeast cake in one cup lukewarm water and add to three cups cold water in which a teaspoonful of salt has been dissolved. Sift in about three and three-fourths cups of buckwheat flour, and beat thoroughly, when the mixture will bubble up when the beating stops. Cover and put in a warm place to rise over night. In the morn-

## BABY CHICKS—U. R. Fishel's White Plymouth Rocks the Best in the World BRUCE & ABBOTT'S BUFF ORPINGTONS

Win at CINCINNATI January 23-29, 1913—1st and 2d cock; 2d and 5th hen; 1st, 2d, 4th and 5th cockerel; 1st, 2d, 3d and 4th pullet; 1st and 2d young pen; 1st old pen; silver cup for best display of Orpingtons, Buff, Black and White competing. The best winning ever made in a big show by a Buff Orpington breeder. We won more first prizes at New Orleans, Atlanta, Pittsburgh, Indianapolis and Cincinnati than all others combined. Send for our mating list—it tells the whole story.

MADISON SQUARE GARDEN 1908-'9 & BOSTON 1909  
KAUFMANN & WINDHEIM NUTLEY N.J.

ROSE  
COMB  
R-1-RED

## KAUFMANN & WINDHEIM'S ... "Famous American Beauty Strain" ... Rose Comb Rhode Island Reds

The recognized champions of the United States. Winners of more regular and special prizes at the great shows of America than any other breeder.

#### EGGS FOR HATCHING

Our breeding pens have never been so strong as at the present time. Every pen headed by a male bred down from our famous Bill Taft, the greatest Rhode Island Red ever produced.

WRITE TODAY FOR HANDSOME FREE CATALOGUE which describes our birds and the plant on which they are hatched and reared.

**KAUFMANN & WINDHEIM, ORIGINATORS, NUTLEY, N. J.**  
(The largest exclusive Rose Comb Rhode Island Red breeders and exhibitors in America.)

ing, add one-half teaspoonful soda dissolved in one-half cup boiling water and two tablespoonfuls sugar or molasses. Beat lightly and bake on a hot griddle. Serve immediately.

#### Virginia Rice Batter Cake.

Boil the rice sufficiently to have one cup when boiled. While still warm, add butter the size of an egg, a tablespoonful of sugar and one teaspoonful of salt. When cold, add one well beaten egg, one pint of milk, one cup of Indian meal and a teaspoon of baking powder. Bake in a hot oven and serve immediately.

#### Popovers.

Beat one egg until very light; add to one pint of milk. Sift in one pint of flour, one teaspoonful baking powder and one teaspoonful salt. Have gem pans hot and well greased; fill one-half full, bake in hot oven.

#### Graham Gems.

One cup graham flour, one-half cup white flour, one-fourth cup sugar, one cup sour cream, one even teaspoon soda, one teaspoon salt. Mix in the usual order, dissolving the soda in the sour cream, and bake in a moderately hot oven.

#### English Tea Cake.

By Miss A. B.

One and one-half quarts flour.  
One-quarter pound lard.  
Two teaspoonfuls salt.  
One heaping tablespoonful sugar.  
One pint scalded milk.  
Three-quarters yeast cake.

Mix in the evening, as you would bread, but making it a little stiffer. In the morning, knead thoroughly and cut the dough into three parts. Roll these separately into round shapes to about one inch thickness, and allow to rise. Bake the same as bread. To serve, split and place in the oven until hot throughout; butter and serve immediately.

#### FOR THE PRESIDENT OF THE A. P. A.

The question of who the next president of the American Poultry Association will be has evidently simmered down to two candidates, both of whom are men of quality known to the poultry world; both are capable, and either would grace the high office for which they have been proposed.

Every member of the A. P. A. has one vote to cast and should exercise his privilege, he should make his choice after well balancing and due deliberation of the qualities of both men, as he sees them, then vote as his personal mind dictates for the association's best interests.

In Mr. E. E. Richards, of Iowa, we have a candidate who has labored for years as a journalist for poultry, his friends are many and he well deserves them all. Personally we are but slightly acquainted with Mr. Richards, but from his record made we are assured of his able quality.

In Mr. E. B. Thompson, Amenia, N. Y., the association offers as a candidate for president a man and a breeder of world-wide reputation, a leader among the breeders of this great country and one of the oldest A. P. A. members. A man of exceptional quality and a success, not only as a breeder, but from every view-point.

For over 30 years he has been among the leading and prosperous breeders of

the age, a man strong in organization always willing with advice and purse to aid the cause, and the first man to realize the value of special organization and to organize and freely back the first specialty club known (The American Plymouth Rock Club) also donating his personal time and for several years acting as its secretary.

To our mind and with due respect to all we have in Mr. Thompson an ideal candidate that promises well for the future of the A. P. A. He has the interests of poultry at heart from the breeders' point of view, just the one we want and need at this stage. The

tonic the association sadly needs is that of a sound breeder at this time, for in all our travels we have found the sentiment strongly in favor of a breeder, and against a journalist for president. The Journal men have had their day and it has been a long one, but with credit to them, now let us have a breeder again for they are the real backbone of the fancy and have made possible the present and the past poultry success. Every member can vote for Mr. Thompson with assurance of a duty well done and a prosperous future for poultry.

H. P. SCHWAB.

## American Silver Campine Farm

### PRODUCE THE LEADING SILVER CAMPINES OF THE WORLD

Bred from special matings and raised right. Barred from head to feet. Grand shape and good size. Acknowledged leaders of all layers of large white eggs the year round; non-sitters. All-round money-makers and ideal fanciers' fowl. Get in on the ground floor with American Silver Campine Farm Strain and be a big one.

**AMERICAN SILVER CAMPINE FARM**  
**MT. CLEMENS : : MICHIGAN**

## If I Buy Baby Chicks Will They Mature Into Pullets Like These?

Will they grow into birds that I can feel proud of and that will lay Winter eggs in quantities, or win the blue ribbons for me, or will they be just scrubs that's the question before everyone who buys day-old chicks. It is not the first price that counts, but will they be right at maturity?

### Caldwell's White Plymouth Rock (Fishel Strain) "Baby Chicks of Quality"

#### From Utility Matings

Will mature into long backed, well made birds pure white in color, that will be the secret of "Winter eggs." Every utility breeder is descended from known good layers that have been bred that way.

#### From Exhibition Matings

Will mature into blue ribbon winners. Every exhibition pen is made up of birds with good combs, of good type and chalk white in color, possessing the rich blood lines of generations of Fishel blue ribbon winners. Our birds were among the principal winners at the Indiana Fanciers' Show, Indianapolis 1912.

#### Our Flocks Are Vigorous

All Fall our flocks have roamed meadows and woods accumulating health and vigor. They are now in Winter quarters so full of life and vitality that their chicks will be strong and sturdy.

#### Here Is the Caldwell Selling Plan

We are now booking orders for "Baby Chicks of Quality" for Spring delivery. We never have been in such fine shape to handle orders of any size. Our fine plant is fully stocked with the finest birds we ever owned of both utility and exhibition quality. An early placed order enables us to so arrange our hatchings that we save money. By your faith you are entitled to that saving so we will allow you discounts for early placed orders, the earlier the greater the discount. Safe arrival of chicks is guaranteed.

#### A New Catalog Is Now Ready

One of the finest ever issued by any breeder. It tells just how "Baby Chicks of Quality" are produced and describes every grade of stock that we have to sell with prices. A copy is ready for you.

**R. C. Caldwell : Box 1021 : Lyndon, Ross County, Ohio**

## National Egg Contest for January

THE hens and pullets in the National Egg Laying Contest at Mountain Grove, Mo., more than doubled the record made by the hens in the same month for the previous year. The yield for January one year ago was 3,203 eggs, and the yield for January this year was 7,016 eggs. The total for the first three months last year was 11,403 eggs, and the total for the first two and a half months this year was 12,970 eggs, or 1,567 eggs more in two and a half months this year than in three months of last year. We attribute this to the fact that we have more pullets this year and the winter has not been so severe as last, and our pens most all appear to be of better quality. They are consuming more feed than last year.

A Canadian Black Orpington pullet in pen 59 laid every day in January, laying 31 eggs in the 31 days. The pen of S. C. White Leghorns, No. 2, belonging to Tom Barron, of Catforth, England, leads the contest for this month with 213 eggs, and also leads for the two and a half months with a total of 476 eggs. They won silver cup for both December and January.

The standing of the ten highest pens of ten hens each for the two and a half months is as follows:

	Eggs.
Pen No. 2. S. C. White Leghorns, England	476
Pen No. 23. Silver Wyandottes, Illinois	384
Pen No. 19. Silver Wyandottes, Iowa	340
Pen No. 59. Black Orpingtons, Canada	332
Pen No. 33. Barred Plymouth Rocks, Illinois	314
Pen No. 57. Black Langshans, Missouri	313

Pen No. 20. White Wyandottes, Arkansas	313
Pen No. 43. S. C. Reds, Florida	306
Pen No. 28. White Wyandottes, Arkansas	305
Pen No. 24. White Wyandottes, New Jersey	300

The best pen records for the 31 days in January were as follows:

	Eggs.
Pen No. 2. S. C. White Leghorns, England	213
Pen No. 57. Black Langshans, Missouri	193
Pen No. 19. Silver Wyandottes, Iowa	192
Pen No. 50. Buff Orpingtons, Missouri	174
Pen No. 20. White Wyandottes, Arkansas	172

Pen No. 33. Barred Plymouth Rocks, Illinois	168
Pen No. 23. Silver Wyandottes, Illinois	167
Pen No. 34. R. C. Reds, Missouri	161
Pen No. 27. Silver Wyandottes, Missouri	157
Pen No. 56. White Orpingtons, Kentucky	152

The best individual records for the two and a half months are as follows:

	Eggs.
Hen No. 68. S. C. White Leghorn, England	63
Hen No. 66. S. C. White Leghorn, England	62
Hen No. 709. Buff Plymouth Rock, Missouri	60
Hen No. 2050. Black Orpington, Canada	58
Hen No. 601. Silver Wyandotte, Iowa	56
Hen No. 600. Buff Wyandotte, Missouri	56
Hen No. 656. White Wyandotte, Arkansas	55
Hen No. 860. Buff Wyandotte, Vermont	55
Hen No. 735. Black Langshans, Missouri	55
Hen No. 61. S. C. White Leghorn, England	55
Hen No. 65. S. C. White Leghorn, England	55

### Our Feeding Tests.

Where we are keeping 28 different kinds of feed before the hens at all times, and are allowing them to help themselves, we are getting the best

results. How long this will continue, we cannot say. If hens will lay as many or more eggs where the feed is kept before them, it will save a great deal of labor in feeding. This may work in winter, but we have our doubts about it in the summer. They have eaten exactly the same amount of wheat as they have of corn, 44 pounds of each. They have eaten about three times as much corn and wheat as of any other one kind of feed. Rolled oats, millet and sunflower seed come next. They have eaten but little ground food of any kind. They are drinking about the same amount of buttermilk as water.

### New York Method.—Pen No. 62.

The method of feeding one pen will be announced each month. This pen in the feeding test is being fed as follows:

Grain mixture in winter	Grain mixture in summer
60 lbs. wheat	60 lbs. wheat
60 lbs. corn	60 lbs. corn
30 lbs. oats	30 lbs. oats
30 lbs. buckwheat	

The above grain mixture is fed night and morning in the straw litter.

The following dry mash is fed in the hopper, kept open in the afternoon only:

60 lbs. corn meal
60 lbs. wheat middlings
30 lbs. wheat bran
10 lbs. alfalfa meal
10 lbs. oil meal
50 lbs. beef scraps
1 lb. salt.

The fowls should eat about one half as much mash by weight as whole grain. Regulate the proportion of grain and

# BESUDEN BROS.' CHAMPION BUFF WYANDOTTES

Have proven their superiority over all others by their wonderful and unequalled show record.

At six of America's greatest shows in the fiercest competition they won 30 out of a possible 32 first prizes and nearly every other prize of importance. Showing at the Great Coliseum Show, Chicago, Nashville, Ohio and Indiana State Fairs, Hamilton and Cincinnati Shows.

This record demonstrates certainly beyond doubt that we have

## The Real Champion Buff Wyandottes

For the 1913 egg trade we have 20 of the most beautiful pens ever mated. Each bird at the head of every pen is a noted winner. All mated with the finest lot of Buff females in existence. Over twenty years of scientific breeding and rich blood lines back of this flock.

### The List of Winners Heading 1913 Matings

Cockerel—First, Cincinnati, 1913.

Besuden Bros., C. A. Besuden, Prop., R. W. Sturtevant, Mgr., Box 359-B, Cincinnati, Ohio

ground feed by giving a light feeding of grain in the morning and about all they will consume in the afternoon feed (in time to find grain before dark). In the case of pullets or fowls of heavy laying, restrict both night and morning feeding to induce heavy eating of dry mash, especially in the case of hens. This ration should be supplemented with beets, cabbage, sprouted oats, green clover or other succulent food, unless running in grass covered range. Grit, cracked oyster, shell and charcoal should be accessible at all times. Green food should not be fed in a frozen condition. All feed and litter should be strictly sweet, clean and free from mustiness, mould or decay. Serious losses frequently occur from diseases, due to the fowls taking into their bodies, through their intestinal tract or lungs, the spores of the fungus causing moulds.

#### The Selection of Breeding Stock.

The breeding season is at hand. It might be well to consider a few things which should be remembered in the selection of breeders for this season, and in the rearing of the breeding stock for next year.

The selection and care of the stock intended for breeding purposes lies at the very foundation of your success in the poultry yard. A single error in the coming season may tear down all that you have been a life time in accomplishing, either in the perfection of a strain of high layers, or in the production of a desired color of plumage, or of a certain type of fowl of any variety. This being true, I cannot too strongly urge upon you, both farmer and fancier, the very great importance of being

careful in the selection and care of fowls which you intend to use for breeding purposes. I cannot impress upon you too forcibly that this is the most serious problem which we have to deal with in the poultry business today. It is more important than housing, feeding, incubation or brooding, and other problems with which we have to deal. The care and selection of your breeding stock affects all phases of the industry.

Selection should be emphasized and spelt with capital letters. It should begin with the eggs which are placed in the incubator, or with those entrusted to the hen. The egg should have a firm shell, should be smooth, of uniform color, and of reasonably good size for the variety it represents. You again make a selection at testing time, culling out the infertile eggs, and those containing dead or weak germs. The next selection is made the day the chick is hatched. The weak, runty, crippled chick should never be allowed to live. They may overcome their weakness to a certain extent but the chances are they will be a menace to your flock, a "delusion and a snare" all through life, and later they may feather out, and recover from their weakness to some extent and if you happen to be short on first class birds for your breeding pen, one of these may slip through, and if there is anything in inheritance of weakness or that "like begets like," the character of weakness will more than likely be transmitted to the offspring, so the elimination of any evidence of weakness at hatching time or later if it develops, may save you from many sleepless nights and from financial loss later in your history as a poultry-

man. Spot it, mark it, and eliminate it wherever it occurs. If you don't care to kill the chickens, mark them, and separate them into a separate pen, and fatten them for market as you do chickens culled out for disqualifications or for other reasons. There is another reason why you should eliminate all which you may have left in your flock. People who visit your place will remember longer and make more remarks about two or three worthless birds which you may have left in your flocks than they will of the hundreds of strong, husky individuals which they may see there. Then when the pullets and cockerels are assembled to go into winter quarters, you should again make another selection. Cull out those which have been slow to feather, slow to mature, and those which are small boned, lacking in vitality, and very much undersized.

I consider the question of vitality of the breeding stock to be the first and most important factor to be taken into consideration in selecting your stock for breeding purposes. Without vitality, a hen cannot be a good egg producer. Without vitality, a satisfactory amount of meat cannot be grown upon a carcass. Without vitality, the fowl cannot make an economical use of the food which you give it. Without vitality your per cent of mortality is certain to be very high. Unless you and I are one of the kind "who knows it all," we are certain to make more or less mistakes in our methods of feeding, housing, yarding and other operations in the poultry yard. Even to do the very best which most of us know how to do, we are still defying nature more

## BESUDEN BROS. PURITAN PARTRIDGE PLY. ROCKS

Their wonderful winnings at four of the leading shows demonstrates the quality of stock we have in our yards. At Chicago, Louisville, Indianapolis and Cincinnati Shows, in hot competition, we won every first we competed for except two.

Our Grand Champion Cock, Pride of Ohio, winner of championship cup at Cincinnati, and First at Indianapolis, will head one of our matings. Breeders and judges pronounced this bird as the most typical Partridge Rock they ever saw. For the 1913 eggs trade we have 10 Very Select Matings.

Every pen headed by a male of the richest blood lines. We know that we can furnish our customers with as good Partridge Rocks as any breeder in the world—and at very reasonable prices.

#### LIST OF MALES HEADING 1913 MATINGS

Cock—First, Cincinnati, 1913; First, Indianapolis, 1913.

Cockerel—First, Cincinnati, 1913.

Cockerel—First, Louisville, 1912.

Cock—Heading First Pen, Cincinnati, 1913.

Cock—Second at Cincinnati, 1913.

Cockerel—At Head of First Pen, Louisville, 1912.

Cockerel—Third, Indianapolis, 1913.

Cockerel—Heading Second Pen, Chicago, 1912.

Cockerel—Sired by First Madison Square Garden Male.

Cockerel—Full Brother to First Chicago Cockerel.

These males are mated to female winners at Chicago, Louisville, Indianapolis and Cincinnati.

We also have in our yards the wonderful pullet, Chicago Queen, winner of First at Chicago, Dec., 1912, and hen from First Madison Square Pen. Also that great breeding hen, Rose of Oaklyn, the greatest breeding hen in this country. We will sell a limited number of eggs from every pen. Orders for eggs should be booked early. Send for our free beautifully illustrated mating list.

Besuden Bros., C. A. Besuden, Prop., R. W. Sturtevant, Mgr., Box 359-B, Cincinnati, Ohio

or less at all times, and the hen cannot withstand mistreatment and wrong methods and be a good producer and keep it up unless she has vitality coursing through every vein of her body. More is required of the modern hen in proportion to her weight than any other class of farm animals. The destiny of the chick is largely determined before the egg is laid. Most of the lack of fertility and low hatching power of the egg and the weakness and high mortality among the chickens is due to lack of vigor in the parent stock. This very fact has brought about the failure of many poultry enterprises. You can

never produce a high laying strain, you can never get that rich, brilliant luster which you so much desire on the plumage of your show birds if those birds are out of condition or lacking in vitality.

In building up a laying strain, endeavor to get your males from a known strain of high producers. More depends upon the breeding of the male than upon the female. One of the main things to look for in your females is their vitality. A hen can never stand the strain of laying a large number of eggs unless she is strong and vigorous.

## Inter-Ocean Egg-Laying Contest

*By John G. Poorman*

**B**ELOW will be found the complete record in The Inter Ocean-Midlothian farms egg-laying contest from Jan. 1 to Jan. 31, inclusive. The prize for the month of January for the greatest number of eggs laid has to be divided, as there are two pens with an identical record of 82 eggs apiece. One of these pens is that of the Blue Bell farm of Glenview, Ill., No. 7 in the list, and the other is that of Jesse H. Powers of Chicago, No. 26. To each of these contestants is awarded a beautiful bronze medal, in addition to the magnificent drinking fountains. Closely pressing the winners, however, should be mentioned pen 13, with a total of 80 eggs, and pen 21, with a total of 79 eggs. Without a doubt

these and other pens will dispute the prize for superiority with the winners during the month of February. Rose Comb Red pullet No. 156, of pen No. 3, is the champion individual layer for the month of January, with 21 eggs to her credit. This bird belongs to Fred Siemsen of Tinley Park, Ill.

The first month of the contest has been completed, with pen No. 7, White Leghorns, and pen No. 26, White Wyandottes, tied for the number of eggs produced during this period. Each pen laid eighty-two eggs, and duplicate prizes will be awarded to the owners.

The total of forty pens entered in the contest, coming from all parts of the country, have made as a whole a creditable showing for the first month. The change in conditions, feeding and new quarters are bound to retard egg

**DO YOU WANT BABY CHICKS? :::: SEE AD ON PAGE 541**

## CAMPINES

IMPROVED GOLDENS AND SILVERS—Yards headed by our great Crystal Palace Cock together with our big winnings at Cleveland under Drevenstedt in one of the strongest classes of the year, places our stud one of the foremost in America. Our first Silver Cockerel was pronounced by experts to be one of the greatest birds shown in this country, the first Golden pen was the sensation of the show. Ten ribbons on twelve entries. Get our egg prices, it may pay you to do so.

## BARRY FARM WHITE LEGHORNS

WE ARE NOW BOOKING ORDERS FOR

## DAY-OLD CHICKS AND HATCHING EGGS

You can be sure of positive success with baby chicks from Barry Farm. We breed only from matured yearling and two-year-old hens. Our boxing methods insure safe delivery. Barry Farm White Leghorns are bred for heavy laying as well as for exhibition points. They are persistent layers, hence money-makers the year round. Write for circular.

**BARRY FARM : H. R. BARRY, Owner : Box 117, FAR HILLS, N. J.**

production. Taking this into consideration, some of the pens have made a remarkable showing, and during the past ten days great improvements have been made in others.

Of the 240 birds in contest about 50 per cent are laying, and 10 per cent of this number have started within the last ten days. There are some pullets not fully matured, and nearly all these show indications of laying in the next two weeks.

The health of the birds, with the exception of one pen, has been perfect. This pen developed chickenpox upon the sixth day after their arrival. Five have been replaced in the pen and the remaining bird is rapidly on the way to recovery and will complete the pen within the next week. If fowls retain their present good health, and there is no reason to anticipate otherwise, the number of eggs laid during February will come near showing a 50 per cent increase.

#### The Various Pens.

The following is a short description of each pen:

Pen No. 1—Single Comb White Leghorns. Went through a slight molt, and no eggs were forthcoming until Jan. 25, when three commenced laying. On Jan. 27 another started. These four birds laid seventeen eggs in seven days.

Pen No. 2—Single Comb Buff Orpingtons. Laid their first egg the second day, and have shown a gradual improvement throughout the month, laying sixteen eggs the last week.

Pen No. 3—Rose Comb Rhode Island Reds. Started laying on the first day. Only four birds are laying, and of the fifty-two eggs to their credit for the month seventeen were laid during the past week.

Pen No. 4—Buff Plymouth Rocks. Are not matured and have not laid an egg. From present indications two, probably three, will be laying within the next ten days.

Pen No. 5—White Orpingtons. Are not fully developed, and, like pen No. 4, show promise of laying soon.

Pen No. 6—Started laying the first day, and by Jan. 21 there were four laying. The other two are still to be heard from.

Pen No. 7—White Leghorns. Started well and continued throughout the month. This pen is tied with pen No. 26 for the largest number of eggs laid for the month.

Pen No. 8—Houdans. For some reason they are not laying as well as they should. The birds seem to be fully matured and will, no doubt, get down to business soon. One bird laid seven of the nine eggs credited to this pen and started laying them on Jan. 12. Four more still are to be heard from.

#### White Wyandottes Improve.

Pen No. 9—White Wyandottes. Started well, had a little slump, but have shown great improvement within the last ten days.

Pen No. 10—White Leghorns. With four laying, are doing favorably and show indications of becoming more consistent.

Pen No. 11—Silver Penciled Wyandottes. One bird started laying Jan. 10 and has laid thirteen eggs. Another started on Jan. 20. So far no others have followed suit. Another two weeks will be greatly beneficial to this pen.

Pen No. 12—Single Comb Rhode Island Reds. There are five birds laying in this pen; the fifth one started to lay

## How a Feed Mixer Will Pay for Itself

**A Feed Mixer is a REAL Economy on Any Poultry Plant, No Matter How Small. It Saves Time, Labor and Feed.**

Suppose you feed only ten quarts of mash a day. Do you know that's nearly 2 tons a year? Yes sir, 2 tons! Now you wouldn't mix 2 tons of feed by hand, if you had to do it in a day. Why, then, should you if you do it in 365 days? Your time is worth as much one day at another.

Let's say you spend an hour a day mixing feed. A mixer will do it better in half an hour. In a year, it will save you at least 200 hours. That's 20 working days. About \$40 worth of time, isn't it?

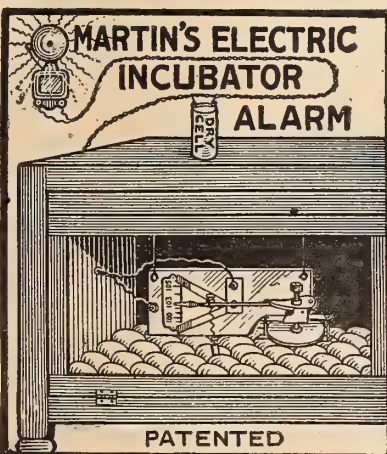

**NOW YOU SEE HOW A FEED MIXER IS A REAL ECONOMY**

### "AFTON FARM" FEED MIXERS

**FOR MIXING DRY FEED, WET MASH, SEEDS, FERTILIZER**

There are other advantages to a feed mixer. Your feeds are fresher and more palatable. They are smoothly and perfectly blended. They are more easily digested. This means that you need less feed, and that your stock is healthier. You can make up balanced rations and special feeds quickly and cheaply. You can mix seeds for sowing. You can make up your own fertilizers. The "Afton Farm" Mixer is used on hundreds of farms. It is always satisfactory. Simple, safe, thorough. Made in 15, 75 and 150-qt. sizes. Hand or power drive. Larger sizes made on order. Write for our free book, "The Secret of Master Feeders."

**Yardley Mfg. Co., Box D51, Yardley, Pennsylvania**

ment may be instantly set to ring the usually at about 100 for "cold" and 105 for "high" as

#### Four Years of Proof in an "Egg-Shell."

—1910—  
Iowa State College, Ames, Iowa. Prof. Wm. A. Lippencott, Poultryman.

"We have used your Alarm on a machine of standard make that for some reason had spoiled hatches for us three times in succession, and by using the Alarm we were able to bring to conclusion a very successful hatch. It informed us twice during the hatch that the temperature was too high."

—March 26, 1910. —1911—

C. E. Jaeger, Columbus, Ohio.  
"The four Alarms which I purchased from you were the means of saving my incubator and brooder house from being destroyed by fire, and I consider them the best investment I ever made in the poultry business."

—May 4, 1911. —1912—  
J. W. Parks, Altoona, Pa., Barred Rock Specialist and Proprietor Keystone Hatchery.

"I consider your Alarm a wonderful invention and have them guarding over 23,000 eggs for me at one time."—February 5, 1912. —1913—  
Mound Hill Poultry Farm, Seville, Ohio, S. D. Hall, Proprietor.

"The Electric Alarm purchased last season works perfectly. It saved 100 times its cost last season."—January 18, 1913.

We are helping others, why not you?

We make special Alarm Systems for Poultrymen having their incubators located outside of their residence, and also for Mammoth Incubators and Brooding Systems. Write for circulars, stating what you desire to equip.

**DON'T RISK** another hatch when it only costs \$2.25 to enable that incubator to call when it needs attention. Here is what Martin has been working for and you have been waiting for, so act today and make hatching a pleasure.

## MARTIN'S MODEL "D" AUTOMATIC ALARM

Was designed to meet the demand for a simple complete and inexpensive Incubator Danger Signal for those operating their machines in their residence and is perfectly adapted to these conditions. It may be instantly attached to any incubator and will last a lifetime. The little Alarm Attachment at any variation of temperature desired—shown above. The bell rings very strong and may be "cut off" upon reaching the incubator by a Special Automatic Plug, which also prevents it from ringing when the eggs are turned or cooled. Any dry battery operates it at least one season.

#### LIVES ARE AT STAKE.

Not only the lives of your chicks but the life of your business depends on the incubator. The success of every poultryman is measured by the number of chicks he can hatch and raise. It is absolutely impossible to secure large hatches of strong livable chicks when the temperature is allowed to run to abnormal extremes. You can insure the lives of your chicks and yourself against loss and worry by equipping your incubator with this safety device.

#### PRICES AND TRIAL OFFER

The price of an Alarm Outfit complete with an Alarm Attachment, electric bell, 12ft. insulated wire and instructions is only \$2.25. Alarm Attachment without bell and wire, \$1.75. Mail us your order at once and we will send your Alarm by return mail postpaid. Use it through 2 hatches and if not satisfied return and we'll refund your money. Address

A Sure Guide  
To  
Poultry Success

## Uncle Sam Poultry Book and SURE HATCH INCUBATOR

will start you out just right in the chicken business. Lots of people would go into the business if they knew how to handle it. Government operators have investigated all departments of poultry culture and sent out the results. We have combined and condensed these reports into the best book ever published on the subject and are selling it at 20 cents, and by our plan you can get 50 cents back. Send us two dimes or ten two-cent stamps. This book tells you all about how to handle the business successfully and gives you inside information that you can't get elsewhere. It also tells you that you should use an incubator for hatching and how a good one should be made. The

### SURE HATCH INCUBATOR

is made just as Uncle Sam says a good one ought to be made and that should be of interest to you when buying a machine. The chicks hatched from eggs other machines spoil will soon pay for your machine. With our sixteen years' experience in building and improving the Sure Hatch, and right up to date with the latest and best in the incubator construction you cannot possibly go wrong in getting a Sure Hatch. No thin iron, paste board or knotty lumber used in the Sure Hatch. No. 1 clear California redwood goes into all our machines. Best lumber in the world for incubators. The pure lake copper

### HOT WATER HEATING SYSTEM

s the best that can be devised. Expert heating engineers tell us that hot water heat is superior to any other. Then we have a first class regulator on the side of the machine—not on the top where it is in the way and liable to get damaged. Regulator has perfect control of the heat. Large egg chamber, roomy nursery with tray for removing chicks. Box has three walls and double air space. Extra heavy insulation in top. Double doors, one of them glass. Can't tell everything here but you can learn all about this machine by sending for our big free book. Send today and get your machine to going as soon as possible and get your products into the early high priced markets. Freight paid and a five-year guarantee.

## SURE HATCH INCUBATOR CO.

BOX 5    :-    FREMONT, NEBRASKA

on Jan. 28. They have made a good record for this month and have greatly improved during the last week.

Pen No. 13—Single Comb White Leghorns. Lacked two eggs of being tied with the winners, laying eighty eggs.

Pen No. 14—Barred Plymouth Rocks. Have slowed up considerably during the past week. As the birds are very active, it is not considered this slump will be of long duration.

Pen No. 15—White Wyandottes. Have shown improvement for the last week and should continue to improve right along.

Pen No. 16—Black Minorcas. Have also shown great improvement in the last week.

Pen No. 17—Barred Plymouth Rocks. Has only one pullet laying with a total of eleven eggs. The others should all be laying within the next month.

Pen No. 18—Speckled Sussex. Has two laying; one laying fourteen eggs and the other beginning Jan. 25 and laying four eggs. There is every reason to believe the balance of this pen will be heard from during February.

### White Leghorns Regain.

Pen No. 19—Single Comb White Leghorns. Started well; had a slump during the middle of the month and have regained greatly within the last week.

Pen No. 20—Houdans. Have not laid an egg. There is reason to believe that they have reached the laying age.

Pen No. 21—White Leghorns. Well up with the winners, with a total of seventy-nine eggs. All six birds are laying.

Pen No. 22—Houdans. This pen of Houdans seems to be in about the same condition as pen No. 20.

Pen No. 23—Blue Andalusians. With four birds laying, the fourth one starting on Jan. 28, this pen has done tolerably well.

Pen No. 24—White Leghorns. There are five birds laying in this pen, but, with the exception of one, are not performing consistently.

Pen No. 25—Single Comb Rhode Island Reds. Up to Jan. 26 had not laid an egg. Jan. 27 the first one started. Jan. 29 the second one followed. This pen has to its credit four eggs. Like the other pens that have laid a few eggs, the pullets are a little immature.

Pen No. 26—White Wyandottes. Is tied with pen No. 7, Single Comb White Leghorns, for leading honors for the first month of contest.

Pen No. 27—White Orpingtons. Only three birds laying. The first started on Jan. 9, one on the 11th and one on the 12th. Two are laying consistently, while the other is laying at four and five day intervals.

### Orpingtons Show Improvement.

Pen No. 28—White Orpingtons. Has two laying, with ten eggs to their credit for the last week; that shows great improvement.

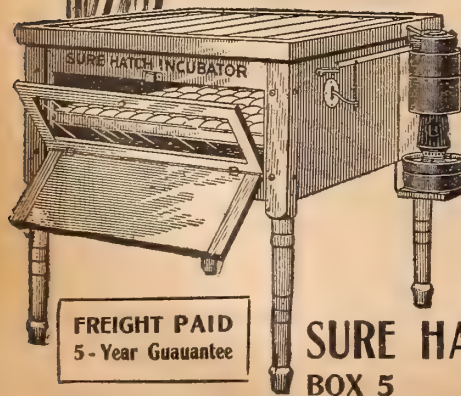

Pen No. 29—R. C. Rhode Island Reds. This pen started out quite promising; has had a slump the latter part of the month.

Pen No. 30.—Mottled Anconas. Are coming along nicely. Have made quite an improvement within the last week.

Pen No. 31—Buff Orpingtons. Are generally increasing right along.

Pen No. 32—Rose Comb Rhode Island Reds. Have started fairly well and have shown gradual improvement. Within the last week they have laid nineteen eggs.

Pen No. 33—White Plymouth Rocks.

FREIGHT PAID  
5-Year Guarantee

Are doing fairly well, with a record of fifty-two eggs.

Pen No. 34—Laid the six eggs to their credit in the first six days and then developed chicken-pox. These birds were removed from the contest quarters and, as reported, five have fully recovered and the sixth one is well on the way.

Pen No. 35—Have not been laying consistently for this month, and for the past week the egg yield has fallen off considerably. They will probably be laying well very shortly.

Pen No. 36—White Leghorns. Have laid consistently throughout the month.

Pen No. 37—Single Comb White Leghorns. Have also performed quite well.

Pen No. 38—White Orpingtons. Have been slow in starting and up to the present time but three have laid. Their total is thirty-six eggs.

Pen No. 39—White Leghorns. Were very slow starting, having laid but four eggs to Jan. 10. They have shown a great improvement within the last ten days.

Pen No. 40—White Orpingtons. Are laying consistently throughout.

Based upon indications of the last ten days, fully 75 per cent of the pens are showing improvement. While the records of January will bear upon the final results, it is entirely too early to form any opinions of the merits of any of the contesting pens.

lie patronage is equal to others in order that you may realize "value received" for your product. With these preliminary remarks I desire to present the claims of the Sicilian Buttercups.

The fact that in no other possible manner can so quick and large profits be made in poultry culture as by taking up some promising new breed which is just coming into popularity, and getting a start with some of the best stock a little in advance of the public demand which is sure to follow, leads many an alert fancier to study carefully the new candidates which are continually coming up for public approval. And therefore I think that no excuse is needed for presenting the claims of the modest little Buttercup.

Although in one sense Buttercups are not a new variety, having been bred in this country for some fifty years, they are new to most poultrymen, little having been said about them in the poultry press, except vague rumors about their wonderful egg-laying qualities. But it is safe to say that when they were finally brought to public notice, no other breed ever introduced in this country gave such universal and unconditional satisfaction and gained friends with every one who made their acquaintance to the extent that the Buttercups have done and are still doing.

I will now briefly state the reasons for the faith that is in me for believing that they will for a long time continue to gain and hold popular favor:

1. They have an individuality of their own. They are unique, distinctive and beautiful, as well as novel and useful. The formation of the Buttercup comb being entirely different from any other breed or variety, places them in a class by themselves.

2. In type and purpose they are distinctively an egg-laying breed, it being the universal and unanimous testimony of all who are acquainted with them that they will produce more large white eggs in exchange for a less quantity of food than any other known breed or variety.

3. No other egg-laying breed are so gentle and domestic in their disposi-

## The Sicilian Buttercup Fowl

*By Isaac P. Tillinghast, Factoryville, Pa.*

THE selection of a breed is perhaps as important a problem as can be given to the novice who has decided to join the ranks of the already great army of poultry fanciers, and for the benefit of the many who may just now be considering this question, I beg to present the claims of one of the newer candidates for popular favor, the Sicilian Buttercup.

Most people who embark in the "chicken business" at all, have two general purposes in view, viz., pleasure and profit, and my observation is that he who does not find pleasure in it will seldom see any profit; and I am just as certain that he who does not succeed in deriving a satisfactory profit, will not find a very lasting pleasure; so in most instances it requires this double incentive to hold one very long in the ranks. But I think that far more are lured into the game through the hope of pecuniary reward than go into it for their health or pleasure.

Granted that the real legitimate aim in keeping poultry usually is, or at least should be, the production of eggs for market as a staple article of food, and that most breeds are judged, or at least should be, by their ability to make good

on this count, does it necessarily follow that this is the most pleasurable and profitable line to pursue? I think not, for I can point to breeders by the score who are taking in dollars through the production of eggs for hatching and stock for breeding purposes against dimes, should they only receive market prices for the same products.

So the question comes up: "How can I get in position to command and receive fancy prices?" On the old and well known breeds certainly not "everybody's doing it," but only the few old veterans who have gained a national reputation on their specialty, through long years of extensive and costly advertising and showing. You may now get and breed just as good stock of Plymouth Rocks, Wyandottes or R. I. Reds as can be found, and gain your share of the blue ribbons at your poultry show, but when your neighbors want some new blood you must sell your best cockerels for a dollar each or kill them, for if they decide to pay anything extra they are sure to send their money away to some old timer in that line.

This explains why it is best, in fact imperatively necessary to take up something new in which your claim for pub-

**CHEVIOT FARMS :: ROUTE 2 :: CINCINNATI, OHIO**

tion, being entirely free from the nervous, wild nature, characteristic of the Leghorn class.

As above stated, the Buttercups are not a new variety of mongrel origin, made up by simply crossing other old breeds, but have been bred in this country for many years and held their own solely on account of actual utility merit; but not being in the hands of fanciers and having no standard, different breeders have followed their own individual fanciers in regard to coloring, so there is quite a variation in the different stocks, but in March last, the American Buttercup Club was formed, and a Club Standard formulated by a committee of the oldest and

best posted breeders, so that we now have an ideal to work to, and this is now leading fanciers to take them up so extensively that the Buttercup Club already has about 200 active members, in fact a more enthusiastic and optimistic set never before got together in the interests of any new breed.

By the accepted standard, the plumage of the stock of the cock bird will be dark red with black tail feathers and wing flights; shanks dark willow green, and with comb cup-shaped with numerous points, which stand in a circle surrounding the crown, like the petals of a flower from which characteristic its name was given.

The female is described as having

neck hackle of golden buff; back lighter buff, mottled with black, distinct spangles being preferred to clouded shading, lacing, or mixed colors; breast lighter shade of buff, plain color, although some of the handsomest stock in this country has black spangles running well into the breast. Ear lobes should be mixed red and white in color.

Good Buttercup stock is still extremely scarce and no doubt all who breed them will have lively sales for years to come. In fact just now the words "Buttercup," and "Opportunity," seem to be quite synonymous.

HARVEY'S *Smokeless*  
FIRELESS BROODER

## FIRELESS BROODING OF CHICKS

Have you read our new book "The Fireless Brooding of Little Chicks?" If not send for a copy at once, or better yet, order your fireless brooders now and a copy will be sent you. Throw away your old expensive, troublesome, chick killing lamp brooders, that menace your property with fire, and buy fireless brooders from a man who makes a business of raising chicks, hundreds of them every year. No Smoke—No Smell—No Fire—No Danger—No Trouble—No Expense, guaranteed to raise the chicks. Freight paid east of Rockies. One for \$5.00, 4 for \$18.00.

HARVEY BROS.

NOTE—If you are looking for quality in White Leghorns, Single Comb, at reasonable prices, good as the best, send us \$1.50 for 15 eggs, all charges paid.

JOHNSTOWN, PA

# 20th Century Dual Purpose Fowl

MONMOUTH S. C. BUFF AND WHITE LEGHORNS. We have perfected in our strain the long sought for result, exhibition and utility combined. Champions of the South, practically sweeping the decks in both varieties at Atlanta, Ga., December, 1912, also winning 1st pen Madison Square, New York, 1912-13, for the 5th year in succession in Buff Leghorns our only entry, places the MONMOUTH STRAIN in a class by itself. Our Buffs and Whites are producing wonderful results on many egg farms the country over, and reports from Argentine Republic and other foreign countries, who breed the MONMOUTH STRAIN, are most flattering, which substantiates our claim that we have perfected in our strain the DUAL FOWL. Why hesitate and experiment when a tried and true article is within your reach? Join the ranks of Monmouth Customers and tread the path of success. Years of experience are back of our matings this season. They are not problematical but assured facts. Our past records speak emphatically for our ability in this line. Send for our beautiful 1913 Catalog and Mating List which gives full description and prices of our matings and stock. Always address,

MONMOUTH FARMS J. C. Punderford, Owner FRENEAU, MON. CO., N. J.

# Poultrymen Have Confidence In The Globe Incubator---

because all the value---all the invested money is put into the machine itself. We put all the money in the machine. We have never made a statement that was unsound or shaky. Everything we say about the "Globe" is truth---positive fact backed up by seventeen years of a wonderful success. Don't be misled by those low priced machines. You know it takes a great deal of yelling to sell anything that's below standard. We have never had to advertise in that way in our life. The Globe's reputation sells it. It is a standard machine---one that you can depend on.

Thousands and thousands of both men and women have been "stung" by purchasing a machine that looks nice in the picture because the man selling it shows a nice big photograph of himself. It is interesting to note that every user of the "Globe" (and then there are thousands and thousands) is today making money just as fast and practical as it is possible to do in the poultry business. And the best proof that our Incubator principles are scientifically correct is the fact that we make Infant Incubators for physicians. Read our large 1913 Poultry and Incubator Catalogue and see what we have to say about our Infant Incubators. This big book has hundreds of testimonials. This is a mass of evidence---solid facts that are the best guide you can obtain. We want you to read them over. See how enthusiastic these people are about the Globe Incubators. Let them tell you in their own words how successful their poultry business has been since they used the Globe Incubator and Brooders. See below for further information about this catalog. Here's a few further words about these wonderful machines and what they are made of.

Send your order at once. Don't miss this remarkable opportunity. And remember when you buy the Globe Machine you are getting real value.

## Poultry and Incubator Book

Send us 15 cents for our big complete book on Poultry, Incubators, Brooders, Poultry supplies. We will save you many dollars. It has more real information than a whole library of Poultry books. It shows everything that is required to make a poultry farm a success.

C. C. Shoemaker, Box 605, Freeport, Illinois

## The Standard 200-Egg Globe, \$18.00

This is without doubt the most carefully built incubator made. It is made of specially selected lumber---each piece picked. Has a most superior hot water heating system and this system is exclusive in the Globe. The pipes that carry the hot water through the egg chamber are made of regular gas steel tubing so that they are absolutely airtight and water-tight. Insulation is the most thorough ever found in any machine. Regulation system is controlled by what is known as the Compound Double Hydro Wafer. Tanks, trays, lamps, etc., are of the finest model and best material obtainable. Can be run with kerosene, any kind of gas or electricity. And all this most perfect construction makes it possible for you to get those high percentage hatches for which the Globe is famous all over the country. This is the incubator that will make you money. This is the incubator that has the real value behind it and not a pretty photograph of somebody.

**200-Chick Globe Brooders \$11.75** After you have your little chicks all peeping about looking like good money, don't chance them to some brass band brooder. Get them in the Globe and you're pretty sure of cashing in at a profit every single time.

This 200-Chick Globe Brooder has all the basic principles that has made the Globe famous. Has the over-head system of hot water pipes, contains two compartments---one for feeding---one for nursery. Ample light and ventilation. The most efficient lamp on the market. Will never rust. The whole brooder is made to stand the racket.

**For 30 Days Only Combination Price \$23.50** If you buy within the next 30 days you can get one of these perfect 200-egg size incubators and one 200-chick brooder, only \$23.50

## A DAY WITH PARTRIDGE ROCKS.

It was a bright, crisp winter morning when the Big Four passenger from Indianapolis pulled into North Manchester, and I alighted on the station platform. My thoughts filled with keen anticipation of the day I was to spend with Mr. S. A. Noltzger, the originator of Partridge Plymouth Rock fowl, looking over his forty grand matings and five hundred head of surplus birds.

Mr. Noltzger was not expecting me, for I wanted to drop in upon him unannounced to see his birds, matings, houses, etc., just as they are in every day life, when visitors are not expected.

Walking up the beautiful Main street of that pretty little city, I quickly arrived at the Hardware building of Noltzger & Co., in the rear of which Mr. Noltzger has his poultry farm office. Here I found Mr. Noltzger, together with his associate, Mr. Russell F. Palmer, hard at work, while the force of stenographers were playing tattoo upon the keys of their typewriters. I could not help viewing the scene for a full minute

paper advertising and journalistic work I had heard much of Mr. Noltzger and his Partridge Plymouth Rocks. I had met the man personally, had often looked over his birds in the show room and naturally had come to the conclusion that he was the genuine fountain head of the quality Partridge Rocks in this country. If that was my feeling before my visit to North Manchester, and it was, I am unable to find the correct words to express my opinion of Mr. Noltzger, his Partridge Plymouth Rocks and all those connected with his business since my visit there.

I supposed, of course, that the twenty to twenty-five birds, shown by Mr. Noltzger at the last Chicago show, embodied the greater portion of his strictly high class exhibition birds. In this I find I was mistaken, for upon his farm, among his sales stock, throughout his mated pens, I found bird after bird the quality of his Chicago winners, and many that I feel sure are superior to those winners. This was explained to me by Mr. Noltzger, who stated that he seldom ever, if ever, exhibited the same bird twice. I found there, in addition

F. S. Smith, Hamilton, Ohio, the big Single Comb Buff Leghorn breeder.

before making known my presence. A regular busy beehive.

As I stood there I could not help but allow my mind to drift off into one of those hazy, dreamy dreams. It seemed almost impossible that this man Noltzger could have originated a new variety of the grand old Plymouth Rock breed, which had gained the confidence of the general public so rapidly that it today took this finely equipped office and this machine-like office force to handle the correspondence and business, built up in so short a time by this one man. The much used Sherlock Holmes wonderful does not begin to express it.

Of course, Mr. Noltzger and his associates, which of course includes his son Clay, were glad to see me; that is, they said they were, and as I noticed a little card hanging on the office wall which stated "We are busy, but never too busy to talk with a man who is as busy as we are," I had to believe what they said, especially by the way they took hold of the situation and made me feel at home right from the start.

The day passed all too quickly and it certainly was an interesting and instructive day to me. Long before I took up poultry

to his Chicago winners, his 1st prize winning pen at the Madison Square Garden, New York City Show last winter, besides his winning cocks, hens and pullets at the same show. In addition there was a grand bunch of 1st, 2nd and 3rd prize winners at such shows as Chicago, Kansas City, Topeka and Indianapolis, during the years of 1909, 1910 and 1911. None of these great winners were used by Mr. Noltzger in his wonderful exhibit at Chicago this winter.

Then there was hundreds of high class cockerels and pullets, scores of which closely approached, if not excelled, his winning cockerels and pullets at Chicago.

The 1st prize cockerel at Chicago this winter, of course, is in a class by himself. Mr. Noltzger, with great pride, picked up the bird as though he was a pet kitten and handed him to me to look over, and as he did so he said: "There, Mr. Coburn, is the greatest Partridge Plymouth Rock, male or female, ever produced on this earth." He is so much better than I ever expected to see at this time that it is almost unbelievable. After handling the bird I could not help but agree with Mr. Noltzger. He truly has all the qualities that goes to make up an extra

fancy specimen. He is one of those kind of birds that is good in every way. He has a great finish and style about him that makes him unusually attractive. He is almost a model in shape in every section, including station and head points, while his style, color and striping can scarcely be criticized.

This season Mr. Nofztger is breeding from six full brothers of this great cockerel, which he has named "Champion." These brothers are from two to four weeks younger than Champion, but their combs, shape, style and finish is such that any novice could readily tell that they were all full brothers.

Mr. Nofztger's claim that his poorest matings among his forty breeding yards are equal and in most cases superior to most breeders' best pens is justified by a close inspection of the forty yards. I found Mr. Nofztger a great believer in plenty of dry scratch litter, placed in each building often, and when a real cold day comes, whether litter was needed or not, a few bundles of unthreshed wheat was always placed before the birds. This kept them busy, placed their blood in circulation and prevented the freezing of combs.

A portion of Mr. Nofztger's farm, which lies at the very edge of the city limits, is covered with a thick mat of blue grass sod and shaded with over twelve hundred cherry and plum trees. Scattered through these is a number of colony breeding houses, a photograph of which is shown elsewhere in this issue. These houses are all open front and each contains a healthy, hardy mating, without a frozen comb in the bunch, which are shelling out eggs like regular egg machines every day this winter.

We looked over the photographs of the three different sets of Partridge Rock females, furnished by Mr. Nofztger to the National Poultry Association for their egg laying contests of 1910, 1911 and 1912. The 1910 contest was won by Mr. Nofztger's birds with an average for the six females of

221 eggs each for the year. The 1911 contest was won by his birds with an average of 232 eggs each for the year. The 1912 contest winners has not yet been announced, but a few weeks ago Mr. Nofztger's pen was only six eggs behind the leading pen for the year, which certainly goes to show the utility values of Nofztger's World's Best Partridge Plymouth Rocks.

Mr. Nofztger has issued a special bargain sales list, quoting special prices on cocks, hens, cockerels, pullets, trios and breeding pens, which he will gladly send to those interested. His catalog, fully describing his forty breeding yards, was being completed by the printers on the day of my visit. This, too, he will gladly send free to those requesting same.—H. H. Coburn.

### THE DUNROBIN FARM.

At Red Bank, N. J., and in the midst of America's greatest poultry center, Mr. A. B. Dalby has built his plant known as the Dunrobin Farm, one of the largest, best and most complete that we have seen. The country in this section is very beautiful. The climate temperate and early, the soil soft and general conditions all that could be desired for high class poultry breeding and raising.

Mr. Dalby is an enthusiastic fancier and breeder who has made his way and placed his line a prominent winner at many of our best shows for some years, and particularly 1907 to the present day. His office displays the trophies won, and the walls are literally covered with prize ribbons handsomely framed. The silver cups, medals, etc., are displayed in specially made cases. Line records are strictly kept, and it is with pardonable pride Mr. Dalby points to his line records as shown.

From the office a good and general view of the plant is had. The great breeding houses reach to the right and left, with the incubator cellar and large brooding house in the rear. The breeding houses are of the open front type and are covered with asbestos, sides and roof, making them positively tight to the north and sides and fireproof. The incubator cellar is built of hollow tile, as is also the brooder house, with an exhibition and stock room above. A large incubator is used, with 10,400 egg capacity. The brooder house is 30x105 feet, equipped on one side with International Hovers for the chicks when first hatched. The other side has the overhead pipe system where the chicks are kept until they are moved to the colony houses out on free range. This great house has a capacity of 7,000 chicks, has high ceilings, is well lighted and perfectly ventilated.

The breeding houses are built in approved style, with pens large, well lighted and kept clean. Each pen has large runways, well shaded. The general arrangement on this plant appealed strongly to us. Cleanliness is the rule at Dunrobin.

Here are bred in their highest state of perfection S. C. Buff and White Orpingtons, S. C. Buff and White Leghorns, Buff Orpington Ducks and White China Geese. Their original stock in Orpingtons was imported by Mr. Dalby and their Leghorns from the best lines in this country.

Here we seen handled and inspected the entire flock of birds. In Buff Orpingtons, also in Whites, we were delighted. We seen several pens mated of superior quality. The Buff color was very sound and the White very clean. Type was a feature in all these Orpingtons, closely followed by extra fine size and most excellent condition. This line well deserves the handsome records they have made for their

# Bean's Columbian Rocks

Sensational Winners at the Club's Annual Exhibit, Phila., Dec., 1912

Winning in a large and strong class every first prize offered, and a majority of all. They also won the special for best display in the American class. Their winnings last year formed the best record ever made on any variety, and they promise to surpass everything, for they are better than ever. Their practical worth as layers has again been demonstrated to our satisfaction. They are result producers. Special: I am offering special mated pens of five (5) birds, bred from my best matings, at \$23.50. Larger lots at same reduced prices. Start now with Beans Columbian Rocks and be satisfied. Circulars free.

### We Tell You Fully How

We have mated to produce that dark, rich, up-to-the-minute color you must have to win, also how we breed our great layers in our special utility yards. Crowther's Reds again win in America's great shows, five firsts, two seconds, one third, two fourths, five fifths, both color and shape on male and female at Chicago—S. C. Reds.

Ira M. Crowther Box "A" Willoughby, Ohio

## BLACK LANGSHANS & INDIAN RUNNER DUCKS

Brookfield Farm birds are Maryland's beauty and quality strain. They have been winning regularly at Baltimore, Allentown, Hanover, Hagerstown, etc., and have proven their worth as well for practical purposes.

**Black Langshans**—Have won first cockerel at Hagerstown two years. My 1912 champion was pronounced one of the best ever shown. Shape, size and sound color are features. For all purposes there is no better bird bred. They are hardy and great layers. Eggs from my best pens \$5 per 15—Utility \$2 per 15.

**Indian Runner Ducks**—Have made a sweeping record with these in the best of classes. My drake "Edward" has an unbeaten record at six great shows. Let me know your wants in either of above for exhibition or choice breeding quality. Pairs, trios and pens properly mated. Eggs from my best pens \$5 per 11. Utility \$2. Selected breeding cockerels a specialty. Satisfaction assured. Prices right. Mention American Poultry Journal when writing. Address

Mrs. F. Littlefield, Box A, Middleburg, Maryland

## DAY-OLD CHICKS

FIFTEEN VARIETIES  
FOR SPRING 1913...

Incubator Capacity, Half Million Eggs Per Season

3,000 S. C. White Leghorn and 2,000 Barred Rock chicks per week, also Brown and Buff Leghorns, R. C. White Leghorns, S. C. Black Minorcas, White, Black and Buff Orpingtons, White and Columbian Wyandottes, S. C. and R. C. Rhode Island Reds and White Rocks. Utility and fancy stock from 9 cents to 50 cents each. Broiler chicks, \$80.00 per thousand. Outsiders of the largest experience have pronounced our plant the best and most scientifically equipped of any in the country. Our chicks are stronger than hen hatched, withstand shipment and live. 5,000 pure bred hens kept under ideal conditions, lay eggs for this immense plant. If you are looking for quality and vigor, send for our free catalogue and price list.

THE CO-OPERATIVE BREEDING & HATCHING CO. : BOX A, TIRO, OHIO

quality is evident and most substantial.

In both Buff and White Leghorns we were well surprised with the fine class of birds seen on this farm. The Buffs were of extra size and particularly clean in sound Buff color. The males of splendid size, well carried and full tails, nice long and clean backs and extra good heads. The females came right up to the male standard and all birds in very fine condition.

The White Leghorns were wonders in color, positively white, long clean bodies and long well-spread tails. Going from pen to pen it was the same condition in all. Here the same as in the Orpingtons many famous winning birds were seen and pointed out to us. Birds with records with their own line, which they are carefully bringing to a very high state of perfection. Mr. Dalby is a man of detail, nothing escapes him, and it is his persistency that makes his success.

Buff Orpington Ducks are one of Mr. Dalby's favorites, he being one of the first to breed them, and we can well say without fear of contradiction that he has the "World's Best," and has won more prizes than any other breeder has. There is much to admire in the Buff Orpington Ducks, their size, with most excellent laying qualities. They are very hardy, mature early and grow very fast, making them most desirable for any purpose, with attractive color and shape.

Mr. Dalby has made it a point to exhibit his birds yearly at the largest and best shows. His show records have been made at M. S. Garden, N. Y., Philadelphia, Palace, N. Y., Baltimore, Allentown, Easton, Morristown, Red Bank, etc., etc. His late winnings as we have them are: At Grand Central Palace, N. Y., Dec., 1912. Buff Orpingtons, third, cock; first, pullet; third, pullet, and fifth, pen. First cockerel won cup for best Orpington shown. White: Third and fourth, cocks; first and fourth, hens; first, cockerel; first, second and third, pullets. Buff Orpington Ducks, all four first prizes in old and young. At Baltimore, Md., 1913: White Orpingtons: First, cockerel; fourth and sixth, pullet; sixth, cock; fifth, hen, and second pen. Buffs: Third, cockerel; second pullet; third, hen; fifth, cock; third, pen. One of the largest classes ever seen. On three entries in S. C. White Leghorns in a class of 276 birds, 14 pens, he won second and fourth, hens; third, pen. On three entries in S. C. Buff Leghorns, second, hen; second, pullet; first, pen. On Buff Orpington Ducks, the largest class ever shown in this country: First, second and third, old drake; first, second and third, young drake; first, second and third, young duck; first and second, pen. Special for best display of ducks in the show, which had the annual meeting of the American Water Fowl Club. At Red Bank, N. J., show, he won eight cups, A. P. A. Medal and Enquire Medal for best cockerel in the show on First Buff Orpington cockerel, and best pen in show on First White Orpington pen. Specials for best display in show. Best display white and best display Buff Orpingtons. Best display of Buff Leghorns and best display of Buff Orpington ducks.

These winnings tell the whole story of Dunrobin quality far better than words of mine can. They are a credit to this line and are of surprising value. Mr. Dalby gives his entire attention to his plant and birds and we would advise all who can to visit this plant and see its stock. It will interest you. Mr. Dalby sends his catalogue free for the asking if you mention the A. P. J.—H. P. Schwab.

A. R. EARLY, ROSLYN P. O., MD.

It is a matter of personal pleasure and pride to chronicle the success and winnings of our friends for it carries with it special sentiment with duty. For all the years we have known Mr. Early we have admired him and his quality as a breeder. He has been consistent and has brought his line along and up to the highest standard as his show record this season amply proves.

At Hagerstown, Md., he won on his White Plymouth Rocks all five first prizes and all specials. At Charlottesville, Va., all first prizes and all specials, with four silver cups included. At Baltimore's great show, 1st cock, 1st, 3rd and 5th pullet, 3rd cockerel, 5th hen, 2nd pen, special for best female, etc. At Richmond, Va., 1st hen, 1st, 2nd and 4th pullet, 5th cockerel, 2nd pen, special for best female in show; 500 birds competing.

Mr. Early has been a consistent winner in this line for many years. We have often handled this line and know its qual-

ity. Its feature is its wonderful sound and pure white color along with shape and size. His exhibit at Hagerstown was a marvel in quality and condition. He breeds them white, with rich red eyes and strong yellow legs. It is a good and proper line to tie to, and we are assured all will receive absolute value and satisfaction from this line. Write Mr. Early for his list and for wants.—H. P. Schwab.

### MOUNT PLEASANT FARM.

Your correspondent recently had the pleasure of a visit at the Mount Pleasant Farm, Mount Pocono, Penn., where every courtesy was extended by the proprietors, affording opportunity to see their plant in detail. We found here a poultry farm unique in its aim and methods—health, strength and vitality is the keynote of all their work. Not a bird was seen on the place but showed perfect health and condition. Though Mount Pleasant Farm claims "Utility Stock Only," birds bred to lay, we had no trouble to distinguish both in the pullet, breeding and cockerel houses dozens of "show specimens." All the birds were very evidently pure bred S. C. W. Leghorns, large, broad deep hens, a type selected and bred by Mount Pleasant Farm methods to lay eggs, large white eggs, and that they were securing these in great numbers we could readily see by a look at the daily records—that these records were strictly true is evidenced by the following quotation from a recent letter from a customer, "From your baby chicks I raised 31 pullets, the finest I ever saw; they were the talk of the town; the first laying season they averaged 215 eggs each." One of the interesting features of the work on the Mount Pleasant Farm is the way they maintain the "old farm idea" that a hen must be, first of all, strong, healthy and vigorous, and the care taken in every detail to achieve this result. Here we see this flock of pure bred S. C. W. Leghorns, fed the best of grain, meat, green food and the necessary accessories of a perfect ration, handled with all the most modern helps to labor (they cut the hay and grind the green bone), yet from dawn to dark at all times is ever apparent the Mount Pleasant Farm demand, that the health and vigor of the birds be maintained. The houses are of the very best construction, stone foundations, timber sufficiently heavy to last for years; glass for ample light and curtains to ventilate thoroughly.

The floors are of a double course of tongue and grooved boards, and partitions every 24 feet, remove all danger of draft. The houses face south and are as dry as a stubble field in August. The cleanliness is remarkable, all manure is carefully removed daily, and fresh litter was abundant on the floors. As Mount Pocono reaches an elevation of 2,200 feet and Mount Pleasant Farm is at the greatest height, severe winters are the rule, drop curtains were over the roosts to insure warmth on nights when the temperature drops "way below zero."

Mount Pleasant Farm is housing 1,500 hens, selected breeders, many of them are two-year-old birds and the proprietors tell us that the fertility of these eggs and the livability of the baby chicks are remarkable, judging from their guarantee to replace "all infertile eggs" this is true; they surely show every confidence in a high percentage of fertility. They have also 1,000 pullets, laying large white eggs for market, and besides ample males for use in the breeding houses, several hundred mature cockerels for sale at a price which will "clean them up quick." Mount Pleasant Farm has an incubator capacity of 24,000 eggs at each setting, two Hall mammoth machines of which they are very enthusiastic, saying, "at a minimum of labor and expense they hatch beautiful big chicks with stamina and vigor, which accounts for a rapid development. About 50,000 day old chicks and 100,000 eggs for hatching will be shipped this season.

The proprietors told of a Mount Pleasant Farm business method, too, that is different. Orders are not booked for shipment in rotation as received, but to be shipped at the date set by the purchaser; this is accomplished by estimating the weekly output and accepting orders for only as many eggs or chicks as they can produce each week. All money and orders are returned at once when impossible to fill them as the buyer requests.

### WEBSTER FARM, GIRARD, PA.

White Plymouth Rocks have had a phenomenal season and the Webster Farm line in particular has proven its worth and has won new records at Philadelphia, Williamsport and at Cleveland, O. At these great shows they have won this season 10 firsts, 4 seconds, 4 thirds, 1 fourth and 3 fifth prizes, a total of 22 of a possible 28 competed for. Their winnings in specials for best males and females in show at Williams-

port and Philadelphia give further proof of the high quality of this line.

Two years ago at M. S. Garden, New York, this line won three first and two second prizes, winning their title as the New York champion line. They have also won at Boston and other great shows.

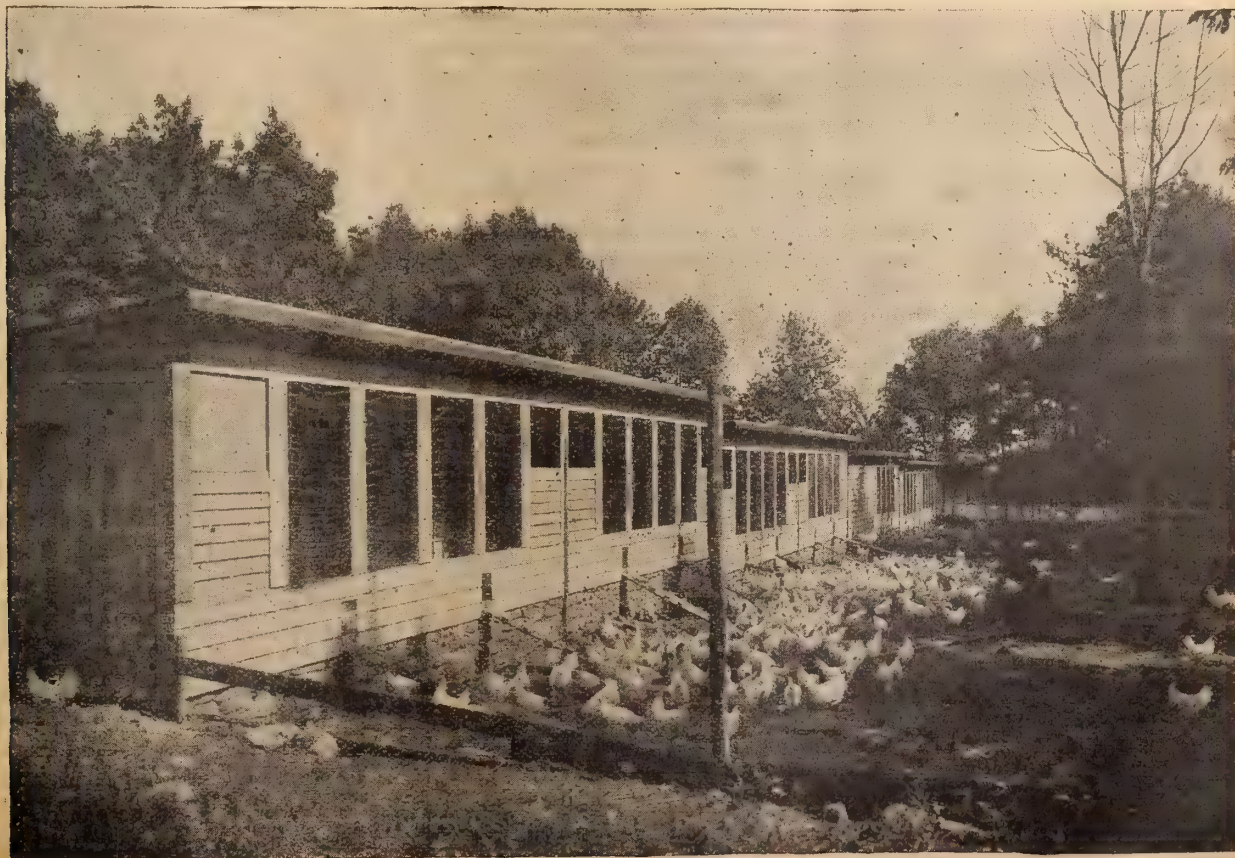

This year this line is better than ever. The matings are made and include all of Mr. Webster's winning birds, including his three highest winning cocks and cockerels at Cleveland's greatest show. We know of no breeder with a similar record in winning males. Mr. Webster increased his plant last season with new houses and with large pens and now has as complete a plant as we know of. He takes special pride in his birds, is an interesting fancier and a most reliable man. Write him for mating list and in regard to choice breeding stocks. He has them and will assure satisfaction to all. Address Webster Farm, Box A, Girard, Pa.—H. P. Schwab.

### OTIS & MOE.

Our progression as a nation is in no way better shown than a comparison between the old fashioned and primitive poultry yards of our fathers and the present up-to-date and well-equipped poultry farm of today.

In the old days the chickens were pretty much left to shift for themselves. They ate any thing they could find, drank from polluted puddles and roosted in the trees. A large proportion of the flock were devoured by skunks, weasels and rats and many others died from disease caused by careless neglect.

Take the modern poultry farm of today, with its carefully attended flock of thousands of birds. Its modern poultry house equipped with sanitary metal nests, feed hoppers and drinking fountains and other modern and up-to-date sanitary equipment, the inventors and manufacturers of which deserve the gratitude of the poultry raiser, for they put money in his pocket by insuring the health of his flock, increasing their productive value and saving him labor. Take Mr. A. B. Moe of the Otis & Moe firm, Chicago, for instance, who invented the Moe's top-fill sanitary drinking fountain for his own needs, which is the only practical fountain on the market that fills from the top, and with this salient feature adds a dead air space between cover and reservoir that keeps the water cool in summer and from freezing in the winter. Not content with this, and because the rats were causing him trouble, he invented a device for safely poisoning them without

Long Laying House, Capacity 1,500 Layers, Mount Pleasant Farm, Mt. Pocono, Pa.

endangering the lives of his birds, both of which inventions proved so useful and successful that for the past two years he has made the successful raising of poultry a study and has become a partner of the firm of Otis & Moe, who manufacture a few of the most popular and useful poultry accessories that can be had.

If the old haphazard chicken raiser could see some of these modern useful devices he would just take a look "and then drop dead again."

### A NEW BOOK ON BROODING.

We have received a copy of the book entitled "Successful Brooding," from the pen of Mr. N. P. Husted, and published by the Simplex Brooder Stove Company of Grand Rapids, Mich. This book covers the subject of raising chicks very thoroughly. It does not only deal with the chicks after they are hatched, but starts at the beginning and tells how to feed hens so they will lay eggs from which chicks that have a chance to live can be hatched.

The system which Mr. Husted has worked

out is entirely different from anything we have thus far had the pleasure of studying. It is different from the many other systems in that it does not require an expensive equipment. It is so simple that any man, woman or child can begin operations with his poultry the day he receives and reads the book. No special coops are required and no special knowledge along the lines of poultry raising. Just ordinary common sense combined with the instructions Mr. Husted gives you in this book will make a success of any poultry yard which has been on the ragged edge of failure for years.

The price of this book is 50c, postpaid. If you have had brooding troubles we strongly advise you to write to the Simplex Brooder Stove Company at Grand Rapids, Mich., asking them to send you their catalog which tells about the Brooder Stove and the entirely new ideas they have brought out for raising chicks. Better still, send them 50c and they will send you their catalog and a copy of this book, which will enable you to increase your profits wonderfully this coming year.

Remember it does not take any additional

money to put this new system in operation. Write the Simplex Brooder Stove Company, 91 Fourth street, N. W., Grand Rapids, Mich., today, now, while you think about it, and get their catalog and a copy of this book.

### MAKES 64 DIFFERENT SIZES AND STYLES INCUBATORS AND BROODERS.

Any one who still retains the idea that the poultry business is one of simple needs and few wants has only to examine the new catalog of The Reliable Incubator and Brooder Company, of Quincy, Illinois, to see how far wrong such an impression really is. This old reliable concern is now offering poultrymen of this country and abroad sixty-four different sizes and styles of incubators and brooders.

Anyone familiar with manufacturing problems knows that a modern manufacturer is not making any more variations than is necessary to meet the actual needs of his trade; and the fact that a conservative house has found it necessary to produce this vast number of different sizes and styles of machines is evidence of how insistent poultrymen are upon securing precisely the machine best fitted to their wants.

They manufacture two general models, "The Standard Reliable Incubator" and the "Reliable Bantling Incubator." These models are made both with and without brooders attached, and also with both hot air and hot water heating plants.

It is hardly necessary to state at this late day that the Reliable Incubator and Brooder Company is an immense institution. They have been making incubators and brooders, supplying the poultrymen of the world, for the past thirty-one years. It is unnecessary to say, either, that all their machines are built with the most scrupulous care, and they back every one with their guarantee—As good as old wheat in the mill.

A trip through the Reliable factory would be a revelation to many of our readers. Their plant occupies a perfectly equipped and designed building 370 x 160 feet. It is two stories high, giving them an actual floor space of over 118,000 feet. The heavy machinery and electric motors are located on the first floor. In addition to the factory space, their warehouses occupy 40,000 square feet, all occupied for the manufacture of Reliable Incubators and brooders, Poultry Supplies and Fireless Cookers. Their buildings are lighted throughout by electricity. Electric power is used for running all machinery and their elevators. It is worthy of note, too, that no contract work whatever is done in this factory, nor do they have any article in connection with their incubators and brooders made for them elsewhere by contract. They have reason to be proud of their machine, their plant and their record, and in these days of trusts and cheap workmen it is a pleasure to find a firm of which it can be said that 90 per cent of all their employees have been with them for a term of years. They do not pay by piece work, but by the week, and it is their policy when once they have a good man to keep him.

A new 1913 catalog of the Reliable Incubator and Brooders is ready for distribution, and will be sent free to any of our readers who will write the Reliable Incubator & Brooder Co., Quincy, Ill.

### RAISING CHICKS AND GETTING EGGS.

If the poultrymen can raise to maturity a high percentage of the chicks he hatches, he has solved the first and greatest of his problems. Chicks that die while brooding represent just so much loss.

Next in importance to the raising of chicks is the getting of eggs in off seasons, when the price is high. The man whose hens lay well in winter has a big edge on the fellow whose layers take a vacation at the very time when their activity would be most profitable.

Users of the International Sanitary Hoyer claim that it has solved both the big problems of the poultryman. The catalog of the International Poultry Sales Company contains dozens of testimonials in which the writers state in effect that the Sanitary Hoyer will raise practically all the healthy chicks committed to its care. Among the hundreds of testimonials printed in the catalog are those of Kellerstrass, Owen Farms, Wm. Cook & Sons, and Rufus Delafield.

To get eggs in winter it is necessary to feed green food, preferably sprouted oats. As a grower of green food, the Sanitary Hoyer is a model of efficiency. In eight days it will transform 12 quarts of oats into enough green food to feed 500 laying hens 3 days. This makes the hoyer a brood-

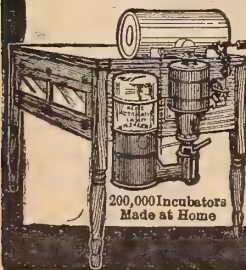

## Build Your Incubator and Save Money —Double Your Incubator Value

**N**OW is the time—right now—to build your own Peerless incubator. **SAVE MONEY** and get the best incubator on earth. Three hours simple work with a hammer and saw, my Fixtures and my Free Plans and I will guarantee you the kind of incubator that gave 92% hatches to A. Groschell and thousands of others.

### 200,000 Poultrymen Have Built Their Own Great PEERLESS INCUBATORS

Anybody can do the work. I guarantee results. Every poultryman knows Sheer's Automatic Acme Fixtures. For over twenty years the most successful men in the poultry business have used Acme Fixtures. The very latest and best that my skill and experience can produce is all yours in a Peerless incubator. Put it together yourself—simple as A-B-C.

The Peerless Automatic Vapor Heating System. The Peerless Automatic Moisture System. The Peerless Automatic Vapor Heating System. Automatic Moisture System and Automatic Ventilating System are the biggest incubator improvements of the age.

The Peerless Automatic Vapor Heating System. The Peerless Automatic Moisture System. The Peerless Automatic Vapor Heating System. Automatic Moisture System and Automatic Ventilating System are the biggest incubator improvements of the age.

These are the exclusive patented fixtures that make the Peerless Incubators the greatest and surest hatches. There are no other fixtures like them. My Automatic Lamp with trip burner will make a gallon of oil go twice as far as any other lamp on earth. My Tandem

Double Compound Damper and Flame Regulator wipes out large operating expense and all trouble. My Automatic Vapor Heating System, Automatic Moisture System and Automatic Ventilating System are the biggest incubator improvements of the age.

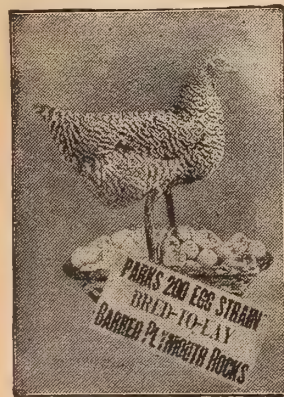

### Make Your Old Machine New

My famous Acme fixtures, lamps, tanks, regulators, etc., can be placed on any incubator. Fix up your old machines with my fixtures and make them modern hatches. Don't repair an old machine of any make until you talk to me.

**Custom Hatching** with my new 500-egg unit machine is a new and wonderful way to make poultry profits. No boilers necessary. Let me send you special information about this and also my big **FREE BOOK** telling everything, gives plans for building at home, shows you the fixtures, shows you how to get higher percentage hatches. Send for it—tonight.

**H. M. Sheer, Dept. 13, Quincy, Ill.**

## PARKS' Bred-to-lay BARRED PLYMOUTH ROCKS

Is the strain you will evidently eventually breed—the strain that laid their way into universal popularity and are holding it by making good in hundreds of customers' hands.

They represent over 20 years of careful selection and trap-nesting for eggs, as well as being kept close to the standard requirements, as my 1913 winnings show:

Chicago, Washington Heights, Jan. 27-30, 1st and 5th pullet, 2d and 4th cockerel, 2d and 5th cock. Pittsburgh, Jan. 13-17, 4th pen. Altoona, Jan. 20-25, 1st, 2d, 3d and 4th hen, 1st, 2d and 5th cock, 1st and 4th cockerel, 2d

pullet, 1st cockerel and pullet pen, 110 Barred Rocks in class.

No more stock until May 15th, then at half price.

EGGS—Selected: 15, \$5; 30, \$8; 50, \$11; 100, \$20. Incubator, 15, \$2; 50, \$6; 100, \$10. Eggs by Parcel Post if wanted.

Parcel Post leaflet, "The Mail Route to Poultrydom," sent free. Large 36-page catalog or chick circular upon request.

**J. W. PARKS, Box J, ALTOONA, PA.**

ing device that can be used at a profit throughout practically the entire year.

At the Rancocas Poultry Farm, at Brown's Mills, in the Pines, N. J., where the Sanitary Hoyer was invented and perfected, it quickly supplanted a costly hot water heated brooder house. At the Rancocas Farm all chicks are now brooded under Sanitary Hoyers, the Hoyers being used in the laying houses. Perhaps the chief distinguishing feature of the hoyer is that it is warmest at the curtain than near the center, which prevents crowding, tramping, and smothering of chicks. Other important features are: It can be used anywhere that there is shelter from rain and wind; it can be set up in a moment without cutting of holes or building of platforms; it is fireproof; the lamp can be lifted out by a person standing up, which makes it unnecessary for the operator to go down on his knees in dust and mud.

### CHAS. A. CYPHERS MARKS A NEW ERA IN ARTIFICIAL INCUBATION.

Mr. Cyphers Has the Following to Say of His New Big 4 Buffalo:

The primary conception of the Big 4 dates back to a time during my experimental work,—the summer of 1890 to be exact. I was then known in my home in Boston as an "incubator crank." One morning I was called to witness a spectacle novel even for that center of early artificial culture.

Refrigerator cars were not so plentiful as now, and a common car of Western eggs had been sidetracked en route during a hot spell. It arrived in Boston alive with chickens,—sun-hatched, aided by the natural animal heat generated by the developing birds. Something over 3,000 lively chicks were taken from that car.

I had been working on the diffusive principle of incubation, which eventually led to the making of the original Cyphers Incubator, and then conceived the idea of bunching eggs and conserving the natural animal heat to aid incubation. Many attempts were made with only partial success. In 1895, at Stroudsburg, Pa., I constructed the first "Mammoth," a 20,000 egg hatcher, for hatching duck eggs.

This was a building 20 feet square, with a small ell used as a receiving room, in the basement of which was placed a standard hot water heater. The heating coils extended around the sides of the hatching room, below the walk, so arranged that the temperature on any one level did not vary one-fourth degree. The regulation was so perfect that it automatically took care of an outside change of temperature of 35 degrees in six hours without varying one-half degree within, something the present hot water heated Mammoth Incubators cannot approach. One small lot of hen eggs turned off a 100 per cent hatch, and other lots hatched up in the nineties. On duck eggs, for which it was built, it was not a success.

No provision had been made for cooling. It was forced home to me then that duck eggs must be cooled during incubation, which fact I have repeatedly demonstrated since. Also that cooling gives a stronger chick from hen eggs, although not vitally essential. Lack of funds prevented my prosecuting the Original Mammoth Incubator to a finish.

Many times during my years of incubator manufacturing experience have I returned to the "bunched" proposition. In 1907 I was fairly at work on it when the panic of that year caught me too deep in big things to withstand the financial gale. But the final workable idea did not materialize until two years ago; and perhaps it might be still slumbering had not a new material given me possibilities of heat deflection within narrow spaces that made the Buffalo Big 4 possible.

When I put the New Buffalo on the market in 1909, I perfected a waterproofing process for fiber board, which I wanted to use as a lining to an airtight case, preventing leakage. In experimenting with this material I discovered that it had unlooked for heat deflecting properties. It impressed me forcibly that this was just the material that I needed to perfect my "concentrated hatcher." By dint of much experimenting I have perfected a most simple interior arrangement that gives an effect that I have wanted to produce for more than twenty years.

The Buffalo Big 4 is substantially made. The weight is approximately 400 lbs., crated. The neat measurement is 28" x 44½" x 58", exclusive of the heaters and legs. The side walls are three and one-half inches thick, and the top four inches, well packed with good insulating material. It has double doors,—the inner double glass

and the outer paneled. The amount of oil used to heat it is but a trifle more than required by a 360 egg standard incubator.

The heaters and lamp are placed in front, extending in the aisle rather than take up incubating room at the side. The lamp has three burners, which engage the three heaters. This lamp needs filling only once each week. Using a low seat instead of stooping, the attendant can quickly trim the wicks without removing the lamp. The chimneys push up into the heaters, and fit on the burner with a guide ring. The three burners can be attended to quicker and easier than one regular lamp can be filled and trimmed daily.

The three heaters engage three compartments, which are heated and regulated en-

days apart, each lot is transferred from No. 1 to No. 2, and from No. 2 to No. 3 section, and finally to the standard hatcher for the exclusion. Here we have three days to hatch the chicks, thirty to forty hours to harden up; and then a day to clean up and adjust for the next hatch.

Each section holds 60 extra eggs to give opportunity to test out the unfertile eggs, and have nearly a full hatcher at the last. The total capacity of the Buffalo Big 4 and auxiliary No. 3 is 1,620 eggs that can be incubating and hatching at one time.

The Big 4 is a wonderful machine, and as simple as it is perfect. It shall meet with the success it deserves, and I will work personally with each operator until his success is assured.

Champion Futurity Cockerel, Allentown, 1912.

tirely independent of each other. Each compartment holds two double trays, nesting 420 eggs in a space 8" x 12½" x 35".

The Big 4 heats perfectly, regulates perfectly, and is a perfect incubator but has no room for the exclusion. After the eighteenth day the eggs must be transferred to a standard incubator, which can be placed on top of the Big 4. We supply short legs for the Buffalo No. 3 for this purpose, although any standard 360 egg machines may be used. Each of the three sections of the Big 4 holds 420 eggs—7 eggs wide, 15 eggs long, 4 eggs high—all turned by turning over two trays. The sections are set six

I wanted to sell the Big 4 at \$60.00, but after running a lot through the factory I find the price must be \$70.00. Simple as it is in design, there is a lot of it, and I personally adjust, heat up and test for temperature each machine shipped.

Mr. C. E. Fisher, McConnellsville, Ohio, breeder of Single Comb Buff Orpingtons, was one of the judges at the Ohio State Show, held at Columbus, Ohio, Jan. 12-18, 1913. He judged many varieties, including a very large class of Reds, which was a hard class, placing awards to the entire satisfaction of all exhibitors.

## THE POULTRY SHOW.

"The Dictograph hen" is the latest aristocrat added to the chicken family. She will make her appearance along with her husband at the opening of the poultry show Monday.

"Mr. and Mrs. Dictograph Hen" will be entered in the show by Arthur E. Cowley, bailiff to Judge M. G. Evans, of the county courts, who recently sentenced State Senator George K. Ceton to the state penitentiary for three years for bribery.

In the poultry catalog, the chickens will appear as "Silver Campines," although they derive their given names from K. M. Turner, discoverer of the Dictograph, who also discovered the "campine chickens" while in England several years ago on business relating to the delicate instrument which has proved the nemesis of grafters of Ohio and other states.

Mr. Turner told Mr. Cowley about the chickens when he was in Columbus in connection with bribery cases, and Mr. Cowley purchased a setting. Two of the chickens hatched from this setting are to be exhibited at the coming poultry show. The chickens are said to be worth between \$50 and \$100 each.

## J. S. FRAZIER, ADVANCE, IND.

Located two miles out of Advance, Ind., is the beautiful 120-acre farm of J. S. Frazier and the home of some of the finest Single Comb Buff Orpingtons in the world. Mr. Frazier recognized the great possibilities of the majestic Single Comb Buff Orpington some seven or eight years ago and saw in them what they have proven themselves to be from every angle of the fancy and utility poultry game. Mr. Frazier started out to build his strain sufficiently low of shanks and long in back! In fact, type was not second to color with him. He raises some of the finest soft, golden buff birds we ever saw, entirely free from black, white, bronze or any foreign color. He raises them by the hundreds and uses both the incubator and the hen to hatch them. His buildings are very modern and convenient. Two fine breeding houses 15x60 feet, cockerel house 12x40 feet, eight double colony

houses, feed and conditioning building and incubator capacity for two thousand eggs. Breeding yards contain 40,000 square feet and afford exercise enough for the birds to insure strong fertility of eggs, and the young chicks start growing as soon as they break the shell. At the Indiana State Fair, 1912, his Buffs won first cockerel, first and second pullet and second pen on four entries. And with an entirely different string of birds he won at the Illinois State Fair, Springfield: second and third cockerel, second pullet, third hen and second pen. At the great quality show—Indianapolis—February 3 to 7, 1913, in a very strong class, he won first cock, first pen, second and fourth cockerel, third hen, champion cock, Buff Orpington silver cup for best display, silver set for largest display of all Orpingtons. Mr. Frazier always mates up great quality in his breeding pens, but this year's matings surpass all previous records. Look up his ad and write for mating list—H. H. Coburn.

## MOUNTAIN ORCHARD POULTRY FARM.

The Mountain Orchard Poultry Farm, Narvon, Pa., is one of the greatest and most original farms under the heavens that we told about a few months ago in these columns. Here 100 acres are devoted to poultry, assuring size and vigor with beauty. Their large flocks of Anconas and Houdans were a revelation to us. They have the quality and the quantity in both. Buff Orpingtons are also a specialty and with Lakenvelders comprise the varieties kept here.

They have stock for sale in all varieties and make a specialty of baby chicks and eggs for hatching. This is a feature of their business, and we know of no other breeder offering chicks from Houdans, Anconas or Lakenvelders.

Vigor with quality are the features we noted on our visit to these farms, and this is of special interest to poultrymen. The farms are in charge of a most capable man, one who has made chicken raising his life's study, assuring to all the kind of strong and robust stock desired.

The capacity of this farm is almost un-

limited. The incubator cellar with three giant machines, the mammoth brooding houses, and the several large breeding houses are almost beyond comprehension. They must be seen to be appreciated. This plant has been built on solid basis, run on business principles and is reliable and worthy of every support. Note their ad in this issue, and in writing mention the American Poultry Journal.—H. P. Schwab.

## PROGRESS IN SPRAYING.

Despite the wonderful advance in spraying means and methods, and the even more wonderful gains obtained in this important department of agricultural endeavor, there are many who will not—or cannot—see the immense possibilities that lie in this direction. It is strange to note how many sound, practical farmers and truckers there are who cannot be made to understand that spraying is a universal remedy—an operation that can be applied to every department of the farm work with equal resultant advantages as in fruit growing. Entirely too many are there who think of spraying only as something to do with better fruit, a sort of specialized operation valuable only in the orchard.

Yet the work of enlightenment is advancing slowly. Potato growers are discovering that they may increase their yields from 50 to 100 bushels to the acre by the judicious use of sprays during the growing season. Truckers are getting bigger crops, better crops and larger prices for their stuff by spraying their tomatoes, cucumbers, lettuce, asparagus and such produce, not only to keep off bugs, rot, mildew, spot and other unattractive things, but to make really larger yields. Cucumbers have been kept bearing six to eight weeks longer through proper spraying. Berries thrive better. In fact, there is no crop grown, in field, orchard or garden, that is not the better for the proper spray.

Just as important, however, as the right spray, is the right means of applying it. It is today a far cry to that remote period when the gardener dusted on his spray or his powder with the family whiskbroom; or when he used a hand pump to force arsenate of lead to the top of a fifteen-year-

## EGG PRODUCERS—If you want eggs buy Fishel's White Ply. Rocks

## S. C. Rhode Island Reds

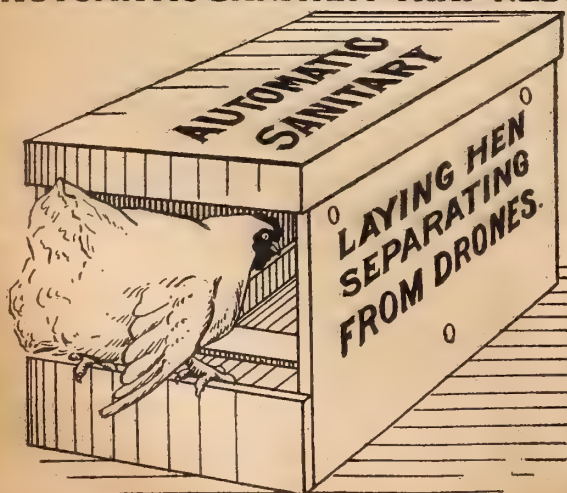

THE VERDICT IS IN, AND VICTORY UNPRECEDENT IS OURS

At the great Philadelphia Show, Dec., 1912, my line of S. C. Reds won the leading and classy prizes of the entire show, in competition with all birds shown. They won 1st cockerel, 1st hen, 2d and 3d pullets and 1st pen in a class of 122 birds. My 1st prize cockerel was awarded the cup for best cockerel in the entire show, with every one of the 4000 birds competing. He also won color and shape specials with other specials for my entire entry. At Cleveland, Ohio, January, 1912, my 1st prize pen was the sensation of the show, judges and breeders saying they never saw one like it for quality and evenness. Write me your wants. If you want quality birds or eggs for hatching, I can supply you. Absolute satisfaction assured to all. Mention American Poultry Journal when writing.

Schenley Heights Poultry Yards, C. F. Rankin, Prop.

: 316 Fourth Avenue, Pittsburgh, Pa.

## AUTOMATIC SANITARY TRAP NEST

1913

1913

## The Best is the Cheapest

THIS NEST requires none of your time or attention, no waiting for hen to lay or resetting of nest. Operated as well and better by the hens during your absence than if present to disturb them. It saves time, labor and feed by selecting the good layers from the culls and drones. The good layers produce the hatchable eggs and strong, healthy chicks. All leading breeders are using the trap nest. We are sending them everywhere. Made of galvanized sheet metal, are sanitary, vermin-proof and will last a life time. Write for free booklet or agency or both. Address

Automatic Sanitary Trap Nest Co., Duluth, Minn.

old pear tree. The spray people have advanced, but not faster, nor even so rapidly, perhaps, as the folk who make the apparatus for applying sprays. There is now a pump and a nozzle, an engine or a hand spray, for every solution, for every crop. These things mean just what every other advance in the way of the right thing, done in the right manner, means to anyone. They are bringing about better crops, bigger profits—inevitably.

Nothing is so indicative of progress along this line as the sprayer booklet recently issued by the Bateman Mfg. Co., of Grenloch, N. J., makers of garden tools, planters, cultivators and spraying apparatus. In the book are embodied the latest and most efficient types of pump, barrel, hand power, knapsack and bucket sprayers—nozzles, extension, tanks, handles and a hundred and one other extremely important pieces of machinery for the thorough spraying of every crop. No fruit grower or gardener or for that matter, any man who raises any crop—should be without this book. It will save money on spraying; it will tell how to spray for profit; it gives an idea of the mechanism and working of the chief types of sprayers. A copy will be sent free, on request, to any address. Every farm owner should send for one. Address Bateman Mfg. Co., Box 119-S, Grenloch, N. J.

### MAKING MILLER FRESH AIR HEN HOUSES.

A first-class carpenter is the result of experience and doing the same thing over and over. Let a carpenter build ten houses and the last one will be better built than the first and at less cost.

The carpenters who make Miller Fresh Air Hen Houses have this experience multiplied by tens and hundreds. Again, they work inside on what is known as templets, a heavy frame platform at easy working height, in which every section of the Miller Fresh Air Hen House fits exactly.

Then, you understand why these are better built than any carpenter would build his first or second or tenth house. Built on templets, every part is brought down to an exact size and the different sections are built in this templet, making them exactly alike. Even the vermin-proof paint is applied by experts, some of the parts being dipped in the paint.

The Miller Fresh Air Hen House is built by the most approved scientific plans. Sixteen feet deep and 10 feet open front, perfect fresh air circulation without drafts is secured. The three windows in the monitor roof brings the sunshine into the rear or laying section of the house. Light and air are the best of all disinfectants; and until you have tried one of these scientific hen houses you will not be able to appreciate the great advantages. Earlier eggs, more eggs, more fertile eggs and a better hatch with stronger chicks is assured when poultry is properly housed and fed.

### THE OWEN FARMS.

We met Mr. Owen at the Boston Show and believe him to be the busiest man in the world today. Business agrees with him, and he is looking better than ever before. He is a man of action, one who does things every day, and for all the years he has been in the poultry business it has been the same. A wonderful man.

Year by year the Owen Farms have been breeding, selling and exhibiting, and when they made their phenomenal win at Madison Square Garden, New York, last year, we believed the climax had been reached and that they would rest on their honors for a few years. With that record indelibly stamped on memory and with the absolute knowledge that at the time they were making that unapproached record at America's greatest show, that birds they sold were winning at a dozen large shows the country over, adding renewed fame to this wondrous line, we believed they could rest and reap the results sure to follow.

Every year the breeders seek to improve their stock. Every year chance birds appear, and make most uncertain the competition and chance to win, and in consideration of all this it did look as if they could keep aloof from the strife and let the others fight it out for place. But—

Well, Mr. Owen thought different. He had the stock to his liking, and believed the breeders of the country should see it and know more of Owen quality. The result is that he has exhibited more this season than ever before, making all the great shows and sending his birds thousands of miles to compete in the best classes the country offered.

At the late Madison Square Garden,

New York, Show, also at Boston, their silver cups, trophies and ribbons won were exhibited in a large display case, which attracted unusual attention, and made a display the like of which was never seen before. Those silent trophies spoke volumes of Nashville and Memphis, of Augusta and Shreveport, and of Atlanta and Pensacola. The blood of the South was represented there and its fairest honors won by this great farm.

To properly review the winnings made would take pages, so let us view the totals and try to comprehend their exact meaning and value.

The Tennessee State Fair, Nashville, Sept. 16-21, 1912, with all varieties shown, they won a total of 72 prizes competing with 659 birds. Of these 28 won firsts, 16 seconds, etc. They also won several specials of which we haven't the list.

At Memphis, the Tri-State Fair, with

describing as it does their 1913 matings, it is mailed free for the asking.

They have an unusually large and fine stock this season, and can supply all wants promptly. You will eventually be interested in them. Why not now? Write them describing your wants. Mr. Owen will be glad to answer you and to help you. His success is an assurance of yours.—H. P. Schwab.

H. E. Buker, Zanesville, Ohio, one of Ohio's leading attorneys, has, as a diversion from business cares, some of the most classy Black, Buff and White Orpingtons in the country. A man of Mr. Bunker's caliber always has the best, otherwise the pleasure would be lacking. His Black Orpingtons have type to burn and are as green as beetles. The pens mated in this variety are extra fine and the young stock will be something to look

over 900 birds competing, in their varieties they won a total of 62 prizes, including 24 firsts, 17 seconds. Here also several cups and specials were won.

At Augusta, Ga., Nov. 4-9, 1912, the Primrose Show of the South, they won a total of 86 prizes, including 24 firsts, 21 seconds, etc. Cups and many other specials were won here including the Gold Special for best and largest collection.

At Atlanta, Shreveport, La., State Fair and Pensacola, Fla., Inter-State Fair records on a par with above were made.

These records show them competing against thousands of birds, and they also show them great winners in each class and at each show. They show the Owen line to be an assurance of success in any competition and under any conditions.

The Owen Farms' mating list is just at hand, and is a most interesting book,

out for in the show room next season. His Buffs are equally as fine as his Blacks and they are golden buff—grand in type and head points. Just one pen of these beauties. And just one pen of the whitest White Orpingtons that grow. A limited number of eggs to spare from these matings. If you want something choice, address H. E. Buker, attorney-at-law, Zanesville, Ohio.—H. H. Coburn.

The readers of our paper, who are needing Farm Fence, Poultry Fence or Barbed Wire, will find it to their advantage to secure the catalog of the Coiled Spring Fence Company, of Winchester, Ind. Write them your request on a postal card and they will mail the catalog to you free. This company sells direct to the farmer at money saving prices. Their ad appears elsewhere in this issue.

# S. C. Brown Leghorns

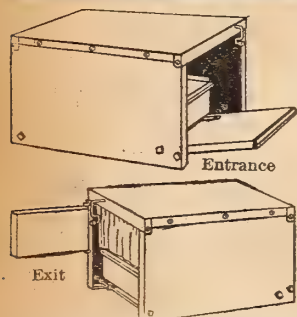

First prize winners at Madison Square, New York, Chicago, Pittsburg, Cleveland, Buffalo and Philadelphia. My prices are reasonable. Write for circular.

**Frank Schellang, R. 8, Erie, Pennsylvania**

## White Indian Runner Ducks

That breed true to type, color and station. In taking up a new breed one naturally wants to buy their stock and eggs from "headquarters" and from stock that you know is mated and bred right. Our White Runners have won at New York, Hagerstown, Indianapolis and Great Appalachian Exposition. We have sold the winners for nearly every show of note the past season. Our yards this season contain the best White Indian Runners in the world. Eggs, \$8 per 12, \$15 per 24.

**Mrs. U. R. Fishel, Box R, Hope, Indiana**

### THE 20th CENTURY Automatic Trap-Nest

Do not spend your time with the old style trap-nest when you can get one that will do the work as good or better. Let the automatic trap-nest do the work for you. They are just what you want. Write for printed matter. Invented and manufactured by

We are discontinuing the manufacture of these two styles and have less than two dozen of each to close out at

**33 1/3% Discount**

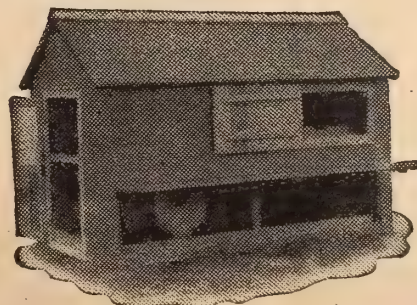

A \$20.00 house complete for  
**\$13.35**

8 feet long, 4 feet wide, 4 feet high.

These houses are well made of dressed and matched pine, painted two coats of oil paint, have solid roofs covered with 2-ply mineral coated felt. Ends and sides are lined with felt, and can be erected in 30 minutes.

Complete with removable nests, roosts, dropping board, fountain and hopper, and securely crated. FREE with every house ordered before March 15th, three oat-sprouting trays and full directions for feeding to produce eggs for 7 cents per dozen.

This two-story \$30.00 house complete for  
**\$20.00**

8 feet long, 4 feet wide, 5 1/2 feet high.

**OWEN CO. ALLEGAN, MICHIGAN**

### JIM ROHAN'S INCUBATORS.

When an incubator wins world's championships, time and again, it's a pretty good indication that incubator will more than satisfy any poultryman, no matter how high a mark of perfection may be desired.

That's the record which has been made by the Belle City incubator, made by Jim Rohan, of Racine, Wis. And there are hundreds of thousands of enthusiastic, profit-making Belle City users who have proved it.

When asked as to how this exceptional record had been made, Mr. Rohan expressed it in one short phrase: "Common-sense building and a common-sense price."

Going further into detail of what his aims are and have been for the thirteen years he has been manufacturing Belle City machines, Mr. Rohan said:

"The common-sense view of an incubator is simply this: Hatch the most eggs, and do it in the simplest way possible. There are some people who think it is necessary to put a lot of theory, and a dozen and one complicated parts into an incubator, in order to get the best results. But that looks like foolishness to me.

"When I started in making Belle City incubators I took for my model a hen. I knew she hatched eggs by the everyday laws of nature. I have studied these laws and the result is the Belle City—an incubator which comes as near to being a mother hen as it is possible to make a manufactured article approach nature.

"And I had a further aim in view. An expert poultryman, by hard work, can get pretty good results from any incubator. But how about the man or woman starting out in the poultry business? Naturally, they don't know a whole lot about hatching, or about chickens in general. Give them a complicated machine, which requires the attention of an expert, and the results are bound to discourage them.

"The result has been this: I have, with expert assistance and advice from the leading poultrymen of the country, brought the Belle City to its present state of perfection. This perfection means simplicity and efficiency. It means that anyone can hatch the biggest proportion of their eggs with a Belle City. The expert likes it because it doesn't require his constant attention. The beginner, or inexperienced man, is delighted with it, because he doesn't have to depend on long experience to show him how to make money from chickens.

It is our suggestion that you write to Mr. Rohan at once, addressing him personally, as follows: Jim Rohan, Pres., Box 27, Racine, Wis. Simply say, "Send World's Championship Hatching Facts," and all the facts and figures will come by return mail. For the most prompt attention we suggest that you mention this publication when you write.

There is no other information in the world like "Hatching Facts" that Mr. Rohan is sending out. From cover to cover you will find every page interesting and instructive. You will learn many facts not to be found elsewhere. You will see hundreds of letters from owners of Belle City incubators, telling how they are making big success with it and their opinions of the Belle City. You will find letters from the world's champions telling what they think of the prize winners. Whatever other catalogs you may send for, whatever you may now know about incubators and poultry raising, we believe it will be to your profit and interest to write at once to Mr. Rohan for the facts that he is so willing to send to all who write him. Just a postal card will do. Send it today without fail.

### LICENE KILLS THE LICE.

When other lice-killers fail, try Licene; it does the work every time. Send to the Licene Co., Pontiac Bldg., Chicago, Ill., for free trial sample.

Lancaster, Mass., February 19, 1913.  
The Licene Company, Pontiac Bldg., Chicago, Ill.

Gentlemen: I have given Licene a good trial. It has killed every louse on the birds I applied it on. I shall need several pounds of Licene after the weather gets warmer and lice will be plentiful. What is your price by the pound? Very truly yours.—A. C. Hawkins.

Mr. E. B. Thompson, Amenia, N. Y., of Ringlet Barred Rock fame, informs us that his 1913 Imperial Ringlet egg booklet is now ready for distribution. Better send for one today.

## WINTER CARE OF LIVE STOCK.

The winter season is the time to set the things to rights on the farms, to take such measures as will bring men, stock and implements to the highest degree of efficiency for the ensuing summer campaign and there is perhaps no better way of distinguishing the successful from the unsuccessful farmer than by the manner in which they care for their stock and implements during the slack season. Go over the horses carefully and see what they need in the way of fixing up. Are their teeth sharp? File them down. Do they need a tonic? Get it. Is the barn tight and warm? Remember that you can't afford to warm all out of doors with feed at its present price. Are you prepared for emergencies that may arise in the treatment of milk fever and garget? Do you suspect tubercle in your herd? Now is the time to test your cattle.

Do you realize the money there is in capons? Get a set of caponizing instruments now and operate on two or three chickens weekly until you become expert, so that when the season arrives you can take advantage of it.

The house of Geo. P. Pilling & Son, 23rd and Arch streets, Philadelphia, Pa., make a specialty of supplying instruments and remedies direct to the farmer, delivering free to your home, you can get anything, tooth instruments, milk tubes, garget and milk fever outfits, tuberculin and hypodermic syringes, caponizing instruments, blisters, tonics, healing ointments, cattle powders, liniments, at prices that will please you—all of these goods are easy to use and are sent with such full instructions as to be absolutely satisfactory.

The Geo. P. Pilling & Son Co. also keep a staff of veterinarians to give free information on request to their customers. Write today, it costs nothing.

## SAFE INSTEAD OF SORRY.

The motto "It is better to be safe than sorry" can be applied with excellent judgment in selecting the Queen incubator, built in Lincoln, Nebraska.

The Queen is manufactured by a man whose cardinal principle is to build honestly. Other manufacturers may make and sell more incubators than P. M. Wickstrum does. But this can be depended upon: Every Queen that goes out of the Wickstrum factory is built according to the Wickstrum idea.

Buyers of Queen incubators are not disappointed. Queen incubators are honestly built throughout. What is more, they have the "hatching spirit," or, as Mr. Wickstrum puts it they have "hatchability." The Queen everywhere has a record that is not surpassed by any other machine for making high per cent hatches of strong, livable chicks.

In connection with the Queen several facts might be mentioned. These are significant:

1st—Queen sales are larger each succeeding year. It has made its way to all parts of the country.

2nd—The Queen is neither a "cheap" nor a high-priced machine. It's a common saying that "the Queen price is a fair price."

3d—The Queen in many successful poultry plants is at work side by side with the highest priced incubators made. It has never taken a back seat for any of them.

To the reader who is about to purchase an incubator, let us say again you can buy the excellent Queen at a fair price and make sure of being safe instead of sorry. Address Mr. Wickstrum at Lincoln, Neb., and he will be glad to send you catalog with 28 reasons for the Queen's superiority.

The H. W. Johns-Manville Co. announce the removal of their Newark office to 239 Halsey street. Their new office and salesroom is located on the ground floor of a modern building, right in the heart of the city's business center. With a floor area of 4,000 square feet, ample space is afforded for the display of a varied line of J-M asbestos roofings, packings and pipe coverings, brake lining and auto accessories, "Noark" fuses and protective devices, Frink lighting fixtures, etc.

Carl E. Rogers, Painesville, Ohio, the Orpington specialist, has just issued his 1913 mating list, which contains a complete description of all his pens of Buff Orpingtons. His special mating No. 1 is headed by the cock bird that won first at the great Northern Ohio Fair and is mated to pullets that will no doubt produce birds of high quality. He has four other pens of exceptional merit. He pays the express and guarantees satisfaction. Write him for a copy of mating list and mention American Poultry Journal.

## We Guarantee our Eggs and Chicks

Because we KNOW how strong and vital they are; how carefully we cull and select and test on our great plant. We make no extravagant claims—we simply say "Buy Tywacana Stock; its sold on a Make Good Guarantee that PROTECTS!"

## Carter's American Dominiques

The Great Sensation of Boston, 1913, Show. For five consecutive years they have cleaned up this great show. Boston, 1913, winnings: Cocks, 1-2-3; hens, 1-2-3; cockerels, 2-3-4-5; pullets, 1-2-3; pens, 1st. No show record equal to mine. No birds better bred for both utility and fancy. Two hundred years or more of breeding has fixed the great egg and meat producing qualities in this warranted breed. I have for sale the best lot of birds I ever owned. Eggs for hatching.

A. O. CARTER      ::      Box 1526      ::      FREEPORT, MAINE

## WHY INCUBATOR CHICKS DIE

The book entitled, The History of White Diarrhoea, or why incubator chicks die, will be sent absolutely free by return mail to anyone sending us the names of 7 to 10 of their friends that use incubators. This book can save you \$100 this summer. It describes white diarrhoea or bowel trouble, the cause and tells of a cure. Book absolutely free for the names.

RAISALL REMEDY CO.,      ::      BLACKWELL, OKLAHOMA

## ROUEN DUCKS

Breeding stock of this highly useful and attractive variety for sale at reasonable prices. Eggs for hatching from carefully selected matings. My birds have again taken the highest awards at the winter shows and are unexcelled in this country.

Louis B. Schram,      60 Hamilton Avenue,      Brooklyn, N. Y.

## PRUDHOMME'S CAMPINES

Are everlasting layers of large, white eggs. My Campines or their eggs were prize winners at Frederick, Hagerstown, York, Allentown, Washington, Baltimore, Philadelphia and New York. Why I breed Campines, why you or your boys or girls should breed Campines. My booklet tells you; it is free, send for it.

DR. J. H. PRUDHOMME      DESK P      THURMONT, MD.

## URBAN FARM CHAMPIONS

We will spare a limited number of settings from our prize winning Black Langshans, White Rocks, S. C. Mottled Anconas, Silver and Golden Campines, Black Tailed Japanese Bantams at Boston Show, 1913. Three varieties shown, our entries won eight firsts, four seconds, two thirds, one fourth, two fifths. Of 34 birds shown, 29 were under the ribbons. Mating list for 1913 on application. Correspondents please write their name and address plainly.

URBAN FARMS,      PINE RIDGE,      BUFFALO, N. Y.

## White Indian Runner Ducks

Fishel strain direct—The great snow white egg producers, and as to their fancy qualities, they won at Chicago, Dec. 12, 1912, as follows: 1st duck; 3d and 4th drake; 1st pen. At Milwaukee, Jan. 1, 1913, won 1st, 2d and 3d duck; 1st and 2d drake; 1st trio. At Minneapolis, Jan. 7, 1913, won 1st pen. At Indianapolis, Jan. 11, 1913, won 2d and 3d duck; 1st pen. I have five breeding pens mated by Judge Hackett who pronounced them of superb quality. Pen No. 1, my special mating, contains unsurpassed quality, every bird in this mating having been a blue ribbon winner at one of the above named shows. Eggs from this pen, \$10.00 per setting of 11 eggs. Pens 2, 3, 4 and 5 contain selected breeders, among which are my second, third and fourth prize winners. Eggs from these four pens, \$3.00 per 11, \$5.00 per 25. Write for special prices on lots of 100 eggs or more.

EDW. M. LONGMORE, SOMERS, WIS.

"Cozy, practical, perfect."

## We Have a Big Proposition for You

If you want a portable house for keeping a few chickens on your back lot, or if you want a number of colony houses, do not fail to write for circulars and prices on the most practical Portable House made. Many Styles and Sizes. Shipments made from coast to coast and every customer a pleased one. We get many letters telling us how well our houses please, and others re-order right along. Prices range from \$9.00 to \$50.00. Also breeders of Silver Spangled Hamburgs and Black Orpingtons. Write for prices and mention A. P. J.

The Lytle Lumber Co.  
Deshler, Ohio

### HOW A WISE FARMER GOT THE BEST OF THE RAIN.

"Don't this rain break the record," remarked Seth Morgan, pulling up his team by the gate, where his new neighbor, Joe French, was sitting. "I'm afraid your roofs aren't standing it very well. I knew before you bought this place it was too damp to live in during the rainy season. I noticed you did something to your roof when you first came, but my wife says that if it still leaks like it used to you'd better move over to our house for a few days, till your house dries out."

"Well, now, that's mighty thoughtful of you," said Joe, "but the fact is, not a drop of water has found its way into the house or the barns, either."

"I knew the roof was like a sieve when I bought the house, but I also knew the value of Genasco Ready Roofing, and I wasn't going to let the roof stand in the way of the house I wanted when I realized that it could be put in better shape than it had ever been, and at a nominal cost. I got some Genasco down at Jim

Wetherill's store and laid it myself. It was surprising how easily I did the work. Each roll of roofing held a package of patent fasteners, called Kant-Leak Kleets, which made the job still easier to do and took away the danger of nail-hole leaks and spreading seams. I made such a ship-shape job that my wife told me I had missed my calling—I should have been a roofer."

"Well, sir, my house and barns have been dry as a bone, and my family and stock are healthy in consequence. From what I've seen of this roofing on other places I know it will last for years without costing me a cent."

"I'd advise you to write for a copy of the instructive little booklet the Barber Asphalt Paving Company, Philadelphia, gets out, called 'The Good Roof Guide Book.' It's got a lot of valuable pointers in it about roofing in general, and it may save you considerable money and worry when your own roofs begin to go back on you, just as it has done for me."

Mr. F. A. Kaup, the Buff Orpington Specialty breeder of Chicago, Ill., advises that

his 1913 issue of his catalog-mating list has been delayed until February 20th on account of the fact that he waited until he had his entire twenty yards all mated up so he could describe them more accurately. He has been winning consistently at the largest shows in the country and in the past two years alone he has won 75 prizes at Chicago, Indianapolis, Springfield and Birmingham, besides furnishing many first prize winners to customers, his latest feat being winning first and sweepstakes cup for best pen at Springfield, 1913, in a class of fourteen pens. His new catalog, which is now out and which he calls the "Buff Orpington Guide Book for 1913," gives a detailed description of his yards with prices for eggs, chicks and stock. In 1913 Mr. Kaup will prepay all express charges on eggs, chicks and exhibition birds anywhere. Mr. Kaup has gone to considerable expense to produce his "Buff Orpington Guide Book for 1913," as it contains many fine illustrations of his birds by Artist Stahmer, but if you will mention the American Poultry Journal he will mail a copy to you free. Address him F. A. Kaup, Buff Orpington Specialist, Desk One, Chicago, Ill.

### GUARDING AGAINST "MISHAPS" IN HATCHING CHICKS.

It is a regrettable fact that the larger part of the failure in hatching chicks might be avoided. The "accidents" and "bad luck" arise from wrong conditions. Not only heat, fresh air and moisture are required, but there is a certain definite relation between them that must be observed. Failure to observe this relation inevitably results in failure or partial failure of the hatch.

The great difficulty is that poultry raisers do not have the knowledge and the skill in themselves to determine and apply these conditions correctly. It is right here that one incubator, the Mandy Lee, comes in and fills a long-felt want. The Mandy Lee is the one incubator which measures moisture as it measures heat. Heat, moisture and fresh air are regulated and adapted to each other. And the beauty of it is, all this is done automatically.

The Mandy Lee Incubator is manufactured by the Geo. H. Lee Company of Omaha, Neb. It is justly one of the most popular of all the incubators, because op-

erators do not need to depend upon their own judgment. They depend upon the incubator. The Mandy Lee is known as "the incubator that hatches by rule." If you prefer to hatch chicks by following plain rules rather than by trusting to your own judgment of "conditions," write to the Geo. H. Lee Co. of Omaha for the 1913 Mandy Lee catalog.

### SCHENLEY HEIGHTS POULTRY YARDS.

Mr. C. F. Rankin, owner of the Schenley Heights Poultry Yards, and whose address is 315 Fourth avenue, Pittsburg, Pa., has brought together a line of S. C. Reds that have won him glory and fame the past few years. We first met this line at the Cleveland, Ohio, Show, January, 1912, where his pen won first prize and specials. It was a wonderful pen in the best of condition and as seen there was, to our mind, capable of winning highest honors at any show.

This year at Philadelphia, December, 1912, they again loomed up strong with improved quality, winning in a class of

123 birds and one of the best ever brought together: Hen, 1st; cockerel, 1st, pullet, 2d and 3d; pen, 1st. His winning cockerel was awarded a medal for best cockerel in the American class and cup for best cockerel at the show—the show sweepstakes special with all cockerels competing.

At Cleveland, Ohio, January, 1913, with a beauty collection, he made a phenomenal record of winning: Cock, 1st; hen, 1st and 3d; cockerel, 1st; pullet, 1st and 2d; pen, 1st, and all specials. Here again his winning cockerel won the sweepstakes special for best bird in the show.

Mr. Rankin has made a few very select matings, from which he will sell eggs for hatching. Write him your wants and for his mating list, for if you want quality Reds it will interest you. Note his ad in this issue and mention the American Poultry Journal.—H. P. Schwab.

J. T. Adair, Millersburg, Ky., won at Cincinnati on his Single Comb Black Orpingtons: Cock, 3; cockerel, 2-4; hen, 2-5; pullet, 1-3-5; pen, 1-3; silver cup for best display. Mr. Adair has won at the best shows this season.

## M.F. & H. FEATHER BROODER M.F. & H.

TWO-COMPARTMENT 150-CHICK CAPACITY

## Fellow Poultrymen

Your Success, Like Ours, Depends Entirely  
Upon the Stock We Raise

Regarding our Feather Brooders, will state that they are entirely responsible for the great success of our farms. We have used the leading makes of oil brooders, also hot water brooder systems, and have found in them only partial success. They meet requirements for a certain part of the year, but are not adapted to all conditions that prevail throughout the brooding season.

In the Fall of 1911 we disposed of all these different makes and systems, and since then have raised all chicks under feathers, and have raised all our chicks at all the times of the year successfully. Since using feathers, we would not use anything else as a gift.

Your success, like ours, depends upon raising stock, and if chicks have a poor start, they never will develop into strong, healthy birds as chicks raised under ideal conditions. We find in our brooders perfect ventilation and all conditions similar to the hen raised chicks.

In my twelve years' experience on some of the largest farms throughout the country, I have never in all this time seen raised a greater percentage of chicks than I have seen during the season of 1912 on Midlothian Farms; have never seen healthier chicks, nor had pullets laying earlier than the chicks we raised under the feathers.

We do not claim this brooder an outdoor brooder before June 1st. It must be operated in a room where there is a floor temperature of 60 degrees during the day time. The temperature can fall to 40 degrees during the night and the chicks will be perfectly comfortable. Of the 10,000 chicks we raised last year, not one case of White Diarrhoea developed.

We are perfectly willing to send you a brooder and all that we ask is that you follow instructions. These instructions are more simple than any that accompanies other makes of brooders. If you do not find a decided increase in the growth of chicks and other conditions as herein represented, you are at liberty to return the brooder and we will refund the purchase price.

Prices—Double Compartment Brooder, 150-Chick Size, \$15; Single Compartment Brooder, 75-Chick Size, \$9

Write for M. & F. H. Feather Brooder Circular

NOTE—It is our desire to establish agencies throughout the country, and we would appreciate the name of your local poultry supply dealer.

Designed and used by M. F. & H. Manufactured by Perfection Feather Brooder Co.

Grand matings, every pen headed by a prize winner and mated to the best type females  
that ever grew. All fine in head points and grand in their respective color. Limited num-  
ber of settings at \$5 per 15 eggs. Two Black Orpington Cockerels winners of first and second  
and first and third prize at two fine shows. Price reasonable.

H. E. BUKER (Attorney at Law) :: :: ZANESVILLE, OHIO

## VASS ORPINGTONS AND SILVER CAMPINES

I can give you bargains in Buff, Black and White Orpingtons in single, pairs and pens. I  
have the best this season I ever owned and will assure you better value than ever before,  
and fair treatment in all cases. They have show records: Silver Campines, best English  
and American bred. We have birds in your yards from Capt. Max Debathe of England;  
also Kennedy and other leading strains. Birds are large, well marked and great laying  
strain of large, white eggs. You can not make any mistake in taking up this beautiful  
fowl. They are the rich man's hobby and poor man's friend. Am booking egg orders now.  
Write for prices; booklet free.

## The Gillette Poultry Feeder

The machine that will make the feeding of your poultry simple and easy. It will feed any kind of grain—whole, cracked or mixed, better than the expert. The poultryman who neglects to get a Gillette Poultry Feeder deprives himself of the only really efficient method of feeding poultry. It saves a large portion of your grain and time, increases the vitality and productiveness of your stock. The only ball bearing machine on the market. Absolutely the only machine in the world that feeds BABY CHICKS as well as grown birds. You really get two machines for the price of one when you buy the Gillette. ORDER TODAY. One size, one-half bushel capacity, price \$2.50. Your name and address will bring our circular. Manufactured and for sale by

**Fred W. Morse Co. -:- Providence, Rhode Island**

Yours very truly, T. K. Collins.  
Eggs for hatching, from the best matings that I have ever had, \$5 per 15; \$15 per 50;  
\$25 per 100. Eggs from other choice matings, \$2 per 15; \$5 per 45; \$10 per 100; \$18 per  
200; \$40 per 500; \$75 per 1,000. My egg catalog is free. May I mail you a copy?  
J. T. Thompson, Hope, Ind.

For twelve years Thompson's White Plymouth Rocks have won  
high honors at many of our largest shows, and they are also  
splendid layers. I have hundreds of choice birds for sale, at  
very reasonable prices, that were raised on free range, as our  
poultry farm contains eighty acres. What better proof can I  
give as to the high quality of my White Rocks than testimonials  
like those printed below?

Mr. J. T. Thompson.

Storrs, Conn., Feb. 3, 1913.

Dear Sir: The White Plymouth Rock eggs which I bought  
of you last October were satisfactory in every respect. Eighty-  
one out of the 100 were fertile and out of these I got 52 of  
the strongest and best chicks that I have ever seen, and it gives  
me pleasure to tell you so. Sincerely, Albert Horton, Poultry  
Dept., Connecticut Agricultural College.

Lower Hutt, Wellington, New Zealand, May 20, 1912.

Mr. J. T. Thompson.

Dear Sir: I must thank you very much for the splendid  
White Rocks that you shipped me. Never before have I  
received, or seen better value sent out from a breeder's yard.  
Such a mating will surely throw some wonderful stock. The  
cockerel, I must say, is an exceptionally good one; he is a  
perfect stud bird, possessing all of those valuable breeding points,  
and was as strong and vigorous after his three months' trip  
as the day he left. Again thanking you for a straight deal,

## THE CHICK BOX THAT IS A FIRE- LESS BROODER.

When baby chicks are received more or  
less time elapses until they can be cared for.  
To add to the many tribulations of the  
poultryman, ordinarily when the so-called  
"chick box" is opened, the recipient begins  
to count the live chicks—and the dead  
chicks. The chances are that each of the  
four corners contains a dead chick that has  
been crowded in the corner and trampled  
on by their neighbors that have remained  
more vigorous because they haven't been in  
contact with the two cold sides of the box.

Both of these live chick problems are  
solved by a package known as the Star-Chic-  
Box, which is manufactured by the Star  
Egg Carrier & Tray Mfg. Co., in Rochester,  
N. Y. The box is unique in its construction.  
All the ventilation openings are broken.  
This means that while a constant change  
of air is admitted, there is no draft and  
the chicks can't get their heads through the  
ventilation holes. The air is warmed upon  
entering, and as the heat from the chicks  
forms a vacuum the air rises and goes out  
through the inner cover. The inside is  
cylindrical-shaped to circumvent the danger  
of the round corners.

Star-Chic-Box constitutes a perfect tem-  
porary fireless brooder in which to keep the  
chicks upon their arrival until they're taken  
care of in the ordinary brooder. The box  
is constructed so durably that it will make  
an innumerable number of trips. Every  
poultryman who ships live chicks will do  
well to write the manufacturers of this box.

## REMARKABLE WINNING.

At the National Meet of the Single-Comb  
White Leghorn Club, held at St. Louis last  
December, Eugene C. Smith, of 317 Galena  
Boulevard, Aurora, Illinois, won first pen,  
second pullet and fourth hen, showing only  
ten birds. He also won Club Special for  
best female head points and Gold Special for  
best display from Illinois.

At the recent Illinois State Meet of the  
National Single-Comb White Leghorn Club,  
held at Aurora during the week of January  
19 to 25, Mr. Smith won third and fourth  
cock; first, second and third hen; first, third  
and fifth cockerel; first, second and fourth  
pullet; and first and second pen—almost a  
clean sweep. He also won the National  
Club Cup for best display and Club Specials  
for best pen, best male, best pullet, best  
hen, best shaped male, best shaped female,  
best head male, best head female, and best  
color female—eleven out of a possible thir-  
teen—and silver cups for best quality dis-  
play in the show and best display in the  
Mediterranean class.

Mr. Smith's booklet for 1913 will be sent  
to those who are interested, by addressing  
him as above.

## OUR LAST CLEAN-UP OF THE SEASON.

At the great Indianapolis show, Febru-  
ary 3 to 7, the greatest show ever held  
in Indiana, we won: Rose Comb—Cock  
1, 2, 3, 4, hen 1, 2, 3, 4, 5; cockerel 1, 2,  
3, 4; pullet 1, 3, 5; pens 1, 2; old 1, 2;  
young first mixed. \$100 Silver Cup for  
best display any variety in the show.  
Single Comb: Cock 2, 4, 5; hen 1, 2, 3;  
cockerel 1, 2, 3; pullet 1, 2; first old pen,  
first mixed pen, and second young pen.  
Silver Cup for best display, also all shape  
and color specials, offered by the Red  
Breeders Club of the World for Rose and  
Single Comb Reds. Send for free mating  
list. We only had five entries that were  
not placed. BUSCHMANN-PIERCE RED  
FARMS, Box 39, Carmel, Ind.

Chas. G. Pape, Ft. Wayne, Ind., the  
well-known Single Comb Black Minorca  
breeder, has just issued his 1913 cata-  
logue. It contains a list of winnings, de-  
scription of matings and attractive prices  
on stock and eggs. Send for a copy today.  
Address Chas. G. Pape, Box 74, Ft.  
Wayne, Ind.

W. R. Shepard, Wellington, O., breeder  
of White Wyandottes, reports that he has  
four special pens mated to produce more  
of those prize winners. All his stock is  
raised on free range and are therefore  
very healthy and vigorous. If you want  
something that will put new life into your  
flock, get into communication with Mr.  
Shepard.

Mr. L. D. Hall, of Seville, Ohio, won  
with his Silver Campines at Columbus,  
Ohio, second pen. Mr. Hall is one who is  
fortunate enough to have enough Campines  
to do a big egg business. His stock is fine.  
He has a few Golden Campines, too. Write  
for mating list.

**WILLARD'S POULTRY FARM.**

Michigan's best Single Comb Buff Orpingtons have been bred and raised on the Willard Poultry Farm at Linden, Mich., for the past seven years. This farm has one of Michigan's largest specialty farms, and when one considers that the first Buff Orpingtons shown at New York was in 1901, it places it among the first to adopt this grand breed. This variety have always held its own, but now is one of the most popular breeds in existence. The Willard Single Comb Buff Orpingtons have a long and honorable show record, winning at Chicago, Detroit, Lansing, Jackson and state fairs repeatedly. Their Old International Champion is a winner of five firsts and was never defeated, winning as a cockerel at Madison Square Garden, Guelph, Toronto, Hamilton and Ottawa. As a cock, he weighs 11½ pounds. He is perfect in size and type, is light golden exhibition buff and is the sire, grand sire and great grand sire to scores of winners. This bird and such birds as first Boston cockerel, second and third cock at Madison Square Garden, together with winning females at Madison Square Garden and Chicago, formed their foundation stock. They also have imported from England many high class specimens. It has been the custom of the Wil-

lard's are pure white and the best type of the true White Orpington. The males that head these pens are all ribbon winners and very white. They are booking orders for eggs to be shipped at once. If you are in the market for some choice birds, you had better write them for full description of their pens. They are also booking orders for baby chicks for spring delivery. They are in position to handle large orders and guarantee safe delivery of them.

**AGAIN VICTORIOUS.**

It will be remembered that Robert Mawer's Rose Comb Reds made a grand winning at Cleveland last year when they sent Mr. Mawer home loaded with ribbons and specials and silver cups enough to stock a jewelry store. At the time of this glorious victory, Mr. Mawer was living on a farm near Deshler, Ohio, but he sold his farm some time last season and moved to Perrysburg, Ohio. He is getting fixed up there most beautifully and has a fine residence, and when he gets through will have a very fine poultry farm. For years he has furnished show birds for our best shows, and if any one in the Rhode Island Red business knows how to mate Reds to produce rich red and grand type, it is Mr. Mawer. Breeders from all over the Middle West

in the fancy business. Among our successful advertisers was G. W. Leasure, winning all the firsts with his R. C. White Minorcas and fifth on R. C. Red pullet. Sheffield Farms, Buckeye Poultry Farm, R. I. Armstrong won first S. C. Red cockerel. G. W. Leasure, Zanesville, won third S. C. White Orpington pullet. Add Columbus to your list of shows next year.—H. H. Coburn.

Mr. Geo. H. Herrick of Durand, Mich., always a winner at the great Chicago and Detroit shows, as well as at other good shows, and the class of Black Orpingtons shown at Chicago was the warmest class ever exhibited. Mr. Herrick neglected getting his birds ready soon enough and his cockerels showed a decided lack of maturity, but he won 2 cock and 4, and 5, cockerel. The writer saw some cockerels, and the other two he exhibited at Detroit, and the intervening time between the shows, made a most remarkable change. They won 1, 2, 3, 4, hands down, cock first, pullet first, pen first. These remarkable winnings were made January 7-14, 1913.

**IMPROVED CAMPINES**

Best Silvers of English and American strains. Eggs, \$4 per 15; \$7 per 30. Circulars. Robt. D. Clemans, Mechanicsburg, Ohio.

**CHICKS**

Hill Hatchery. "Healthy Hatched Chicks." S. C. White Leghorns, 12½c; S. C. Black Minorcas, 15c; Barred Plymouth Rocks, 15c; Rhode Island Reds, 20c; White Wyandottes, 20c; White Orpingtons, 50c. Hatching eggs. Thirteen years' experience. Correspondence solicited. L. V. Hill, 296 N. 10th St., Newark, N. J.

**Baby Chicks and Ducklings**

We ship chicks and ducklings, and guarantee safe arrival to your express office. Barred or White Rocks, Brown or White Leghorns, R. I. Reds, Buff Orpingtons, Pekin and Indian Runner Ducklings.

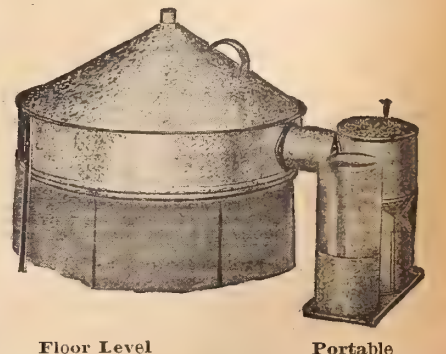

Price, 10 to 18 cents each.

Send a 2 cent stamp for illustrated catalog. Sunnyside Poultry Farm, Box A.P., Cromwell, Ind.

**MORE EGGS  
MORE MONEY**

By feeding **CRYS-CO**, a petrified shell and grit combined, containing 92% PURE CARBONATE OF LIME, 1% HARD SHARP SILICATE GRIT. Better than oyster shells, goes one-half again as far, saves buying separate grit. Indorsed by leading breeders in the United States and thousands of poultry raisers. Ask your dealer. Look for trade-mark. Valuable booklet, free. **W. A. NEUSITZ & CO., St. Louis, Mo.**

**Raise Your Chicks  
With An (Elgin Hover) and  
Get Prize Winners**

Blanket on backs, Perfectly Ventilated, Fire-Proof, Removable Curtain, Sanitary, Low Priced, Gas Lamp Bowl, Cool Lamp, Fill lamp bowl without removing or blowing out lamp, Oil outside of lamp box. Send stamp for particulars.

**The Elgin Poultry Supply Co., Elgin, Ill.**

**SINGLE-COMB WHITE LEGHORN PULLET, WINNER AT NATIONAL SINGLE-COMB WHITE LEGHORN CLUB SHOW AT ST. LOUIS, 1912. ALSO CHICAGO, 1912. BRED AND EXHIBITED BY EUGENE C. SMITH, 317 GALENA BOULEVARD, AURORA, ILLINOIS**

Mr. Smith's booklet for 1913, one of the finest ever issued, giving list of matings, etc., will be sent on request.

lards to have Judge Stanfield score their flock from year to year. In 1908 there were 28 cockerels and 68 pullets scoring 90 to 96 points. In 1910, 85 birds scored from 92 to 92¾, 67 from 93 to 93¾, and 32 from 94 to 95½. In 1911, they ran even better, and now they have them still on the gain. They are in a position to give the buying public more for their money than ever before. They are mating 20 very choice pens for the coming egg trade headed by winning males and containing many exhibition females. The price asked for stock and eggs is indeed most reasonable, considering the quality. The Willard Poultry Farm sales, which occur two or three times a year, are very popular and they sell birds that produce winners for all parts of the United States. Write for circular which shows cuts of some noted winners and gives testimonials from satisfied customers. Visitors are always welcome at Willard's Poultry Farm. Write for mating list.—H. H. Coburn.

C. L. Cunningham & Son, Caruthersville, Mo., have been exerting all their efforts this year to have as good stock as any breeder in their pens. They have mated up nine pens for their season's trade and the birds in these pens are as good as can be found anywhere. They

visit his yards and buy winners from him. Don't be misled into thinking he sells all of his good ones, for he keeps the birds that produce the good ones and plenty of their young stock himself. At the Cleveland Show, Jan. 20-25, 1913, he won—1 cock, 4 cockerel, 2, 5 hen; 4 pullet and 2 pen. Club ribbons and best display. Mr. Mawer is decidedly on the square and will give you good value every time you order. Write for mating list.—H. H. Coburn.

**THE COLUMBUS, OHIO POULTRY SHOW.**

The Ohio State Poultry Show held its fourth annual exhibition Jan. 13-18, 1913, and it was in every way a great show and a grand success. The quality of the birds, of which there were 1,200 in competition, was very fine. In fact, these Columbus shows round up more quality than those held in much larger cities. There were 150 birds in the Buff Orpington class. The premiums were promptly paid and many beautiful cups and specials were given. The association is after an up-to-date show building on the State Fair grounds for their next show, which date is fixed for the second full week in January, 1914. The association consists of some of the finest fellows

# FOR SALE

Stock and eggs from winners at Mansfield State Show of Ohio, Columbus and Zanesville, Ohio. I won the \$50.00 Sweepstake Cup and many other specials. I breed on separate farms. White Orpingtons, R. C. White Minorcas, R. C. Reds that are red, Buff Rocks and I. R. Ducks. Write for mating list.

**G. W. LEASURE - ZANESVILLE, OHIO**

## ROSE COMB REDS

Boston and New York Winners—At Boston 1913 won, 1st cockerel; 4th cock and 4th pen, with specials. Last year also won both shape and color specials and special for best R. C. Red female. Fourth Cock at Palace New York Show last month. In type and color as well as in head points, my line is unequalled and have been line bred for years. Write me your wants. I will please you with price and quality. Eggs for hatching: Mating list now ready.

**GEO. W. LITTLE -- 29 Mt. Vernon St. -- BRAINTREE, MASS.**

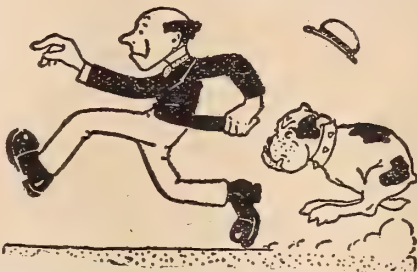

## ARE YOU GETTING AHEAD?

There is no reason why you should go to the dogs in the poultry business, if you start with the right breed and the right strain. The S. C. White Orpington is conceded the best breed in the world, and there is no better strain than the ALTAMONT strain.

We win at all the leading shows, and have never failed in an egg laying contest.

We are getting orders for Stocken eggs from all parts of the country and Canada. Write for catalogue, with show record. Prices cut one-third. We breed White Orpingtons exclusively.

**ALTAMONT POULTRY FARM  
R. R. 5, COLFAX, IOWA**

## EGGS for HATCHING and BABY CHICKS From FOGG'S SINGLE COMB WHITE LEGHORNS

will produce you fine exhibition birds and heavy layers. The breeders this season are the finest lot we have ever mated. Our baby chicks are the kind that LIVE, and eggs for hatching will produce that kind. We guarantee safe arrival of eggs and chicks. Send for mating list now.

**N. V. FOGG -- Box R -- MT. STERLING, KY.**

## "O. K." Poultry Litter

TRADE MARK

## WRITE TO-DAY FOR FREE SAMPLE

"O. K." POULTRY LITTER is the most wonderful litter for BABY CHICKS and POULTRY of all kinds. It's cheaper to use and ever so much better than Straw, Clover, Alfalfa, Sawdust, Shavings, or anything else anyone has ever thought of for litter. Everyone who tries it will use nothing else.

## POSITIVELY NOTHING SO GOOD FOR THE BROODER

In the BROODER one lot of "O. K." Litter lasts until the chicks have outgrown the brooder without one single cleaning out, and always keeps the brooder clean, dry and sweet. In COOPS, LAYING HOUSES and SCRATCHING PENS, "O. K." Litter dries up the droppings so that the house is always dry, clean, sweet-smelling and sanitary, and needs cleaning out only once every three or four months. "O. K." Litter is a tremendous saver of time and money.

"O. K." Litter will not burn. Lice will not come where it is used. TELL US HOW MANY HENS AND CHICKS YOU KEEP—WE WILL TELL YOU HOW MUCH "O. K." LITTER YOU NEED.

Write for free sample and printed matter today. You need it.

**THE O. K. CO.**

Dept. 173, 160 Pearl Street  
NEW YORK CITY

## EVERGOLD BUFF WYANDOTTES.

Rocky Run Farm, Northfield, Ohio, owned by W. G. Marshall, and having Gerald Williams as manager of the poultry interests, specializes in Buff Wyandottes, and the strain is known as the "Evergold" strain. This variety of fowls are enjoying another great boom which they rightly deserve, being among the most profitable and handsome varieties of Wyandottes. We have always favored the Wyandotte comb, both for its looks and for its adaptability for cold climates, and this, combined with correct Wyandotte type, topped off with the Evergold golden buff, the result is most satisfactory. Few pictures could name the breed of chicken served to them, but when one knows he is eating Wyandotte meat, he knows it is the best, and testing it with the meat of other breeds, one can actually distinguish it by its fine grain, and thickness of juicy meat on the back and breast. As layers, Wyandottes are everything desirable when properly cared for, and the Evergold strain of Buffs have established some heavy records, so they shine as trap nest performers as well as in the show room. Some of the latest winnings were at Toledo and Cleveland, Toledo holding the record to the largest class to date, where there were 267 birds competing. The Evergold Buffs won State Championship Cup, 1, 3 hen and 1 cockerel. Special prize for best colored female, and had 19 other birds placed in the largest and best class ever shown. At Cleveland, Jan. 20-25, 1913, they won 2, 4 cock; 1, 5 hen; 3, 4, 5 cockerel; 2, 3 pullet; 1, 2, 3, 5 pen. Color special; shape special; special for best female; best display. Judge Drevenstedt said there was more quality in this class than in New York and Boston combined. The East certainly cannot put anything over on the Evergold Buff Wyandottes. If Rocky Run had exhibited in New York, what would the Evergolts have done to them? Write for circular and look up ad.—H. H. Coburn.

## SILVER AND GOLDEN CAMPINES.

Gensemer Brothers, of Creston, Ohio, were among the wise ones to take up the great Campine craze. They quietly went at it, and imported the best birds that money could buy, paying fabulous sums for individuals and succeeded in raising enough to do business with in the critical moment, and now they are, without question, the largest breeders of Silver and Golden Campines in the United States. They find that the Campine fully meets their expectations both as a fancy breed and as an ideal utility fowl. Campines bid fair to give Her Majesty the Leghorn a run for the money, and that is some proposition, considering they are raised by the thousand where other breeds are raised by the hundred. All they need is men of practical business ability and financial standing, like the Gensemer Brothers to push them, but in reality they can push themselves. Dollars and cents does it in America. Gensemer Brothers are well fixed financially and would necessarily have to be to get hold of a Crystal Palace winner. They imported this bird and fifteen females, descendants of Silver King. These birds are mated in Pen number one this year. Their Golden Campines were bred from an imported pen and are among the best produced. The Golden Campine is more scarce than the Silver variety, but are equally as pretty and are the choice of some people. Gensemer Brothers are mating up 150 birds for the egg trade, and are booked way into July. Of course there are some open dates. One grand thing about the Campines is that July, August and September hatched chicks get there in time for Winter and early Spring laying. They won at Cleveland, January 20-25, 1913 on Golden Campines, 1 pen, 2, 3 cockerel, 2, 4, 5 pullet. On Silvers, 1 cockerel, 3 pullet, 2 pen. The male heading this pen is a Crystal Palace winner. Visitors are always welcome on this farm which is a beautiful place, on the edge of Creston, Ohio. They have many fine buildings and are building more. Write for mating list and mention American Poultry Journal.—H. H. Coburn.

J. B. Greenan, Deckerville, Michigan, won on his White Wyandottes at Port Huron, 1913, 1, 2, cock, 1, hen, 1, 3, cockerel, 2, 4, pullet, 1 pen. Best display and special for best bird in show. His first cock winning the prize. Judge Wise said the Port Huron show was the best in Michigan and the White Wyandotte class was the best he had ever seen. Mr. Greenan's White Wyandottes are second to none. His pens contain the best quality he ever had and that is the best. Write for mating list.

**FRAZIER'S SINGLE COME BUFF ORPINGTONS.**

One of the most up-to-date and finest specialty farms in the Middle West is that of J. S. Frazier, Advance, Ind., breeder of high-class Single Comb Buff Orpingtons. This farm contains 120 acres of gently rolling land-soil perfectly adapted for poultry raising and perfectly drained. Many beautiful shade and fruit trees afford ample shade which does its part toward producing that beautiful, soft, golden buff that characterizes Mr. Frazier's Single Comb Buff Orpingtons. It is needless to state that he raises all of his birds on range and uses both artificial means and good mother hens. The yards running from the breeding pens are very large and always green, thus furnishing plenty of exercise and green food for breeders and insuring strong fertility of eggs. Mr. Frazier has about 900 birds on hand at the present time, and they are very fine, running extremely even in color and buff to the skin, the flock as a whole being practically free from black, bronze, white or any foreign color, and showing grand Orpington type and size. He has mated up ten very choice pens for the egg trade and heading them with prize winners. The pens will also contain many prize winning females that have proven themselves producers of prize winners. Send to Mr. Frazier for a complete list of his winnings and mention American Poultry Journal.—H. H. Coburn.

**BESUDEN'S PARTRIDGE ROCKS.**

Chauncey A. Besuden is the proprietor and owner of a specialty poultry farm that is a real poultry farm, being one of the largest and finest devoted to the fancy poultry business, exclusively, in Ohio. This great Specialty Partridge Plymouth Rock Farm is located a few miles out of Cincinnati. The buildings are exceptionally fine and built after the most advanced plans and are equipped with every modern appliance in the way of feeders, fountains and sanitary nests. Mr. Besuden uses a great many colony houses of both the single and double type. There are also ten cockerel houses on this farm. The original stock was purchased from the originator of Partridge Plymouth Rocks, Mr. S. A. Nottzger. His strain is known as the "Puritan" strain, and, like our Puritan ancestors, they possess the same vigorous and sterling qualities. He has mated up many grand pens for the large egg trade this season, and is in a position to supply the wants of every one who is desirous of starting a flock of Partridge Plymouth Rocks. Send for a catalogue which gives the prices and list of prizes won.—H. H. Coburn.

Mr. G. W. Leasure of Zanesville, Ohio, successfully handles three varieties of fancy poultry, Single Comb White Orpingtons, Rose Comb White Minorcas, and Rose Comb Rhode Island Reds. He raises them mostly on separate farms and culls closely in Fall, bringing only the best to his place at Zanesville. In White Orpingtons he has some

of the best in the country and has furnished winners for such shows as Indianapolis. He is all sold out of stock and has had to return many dollars to prospective buyers. He is one of the foremost breeders of Rose Comb White Minorcas which breed possesses all the good points that the other varieties of Minorcas have, and as layers can go them one better. A fancier living in Ohio and not breeding Reds, would be unpopular, so last but not least, Mr. Leasure has some Rose Comb Reds that are Red and the females have some phenomenal egg records as well as honorable show records. Write for his mating list and mention American Poultry Journal.

**THE INDIANAPOLIS SHOW.**

The Fanciers' Association of Indiana held its thirteenth annual show Feb. 3-7, 1913, and, as ever, was a grand success both in quality and the number of birds exhibited, and also financially. There was a large exhibit of dogs and pigeons also. There were many fine cups given and the ribbons were up promptly. The president of the association is U. R. Fisel, Hope, Ind.; vice-presidents, C. L. Buschmann, Indianapolis, Ind.; H. Bradshaw, Lebanon, Ind.; M. J. Niblack, Vincennes, Ind.; G. Ropp, Columbus, Ind.; W. D. Hoover, Taylorville, Ill.; Frank P. Johnson, treasurer; C. R. Millers, secretary; Alec Chambers, assistant secretary. Superintendent of poultry, E. B. Murphy, Carmel, Ind. The poultry judges were: W. C. Pierce, Percy Cook,

A. F. Kummer, Chas. McClave. Dogs—John Bradshaw. Pigeons—Geo. Ewald. Fisel's noted dog, Frank, was one of the attractions, people coming for miles to see him the one day he was on exhibition. This is one of America's greatest quality shows and the competition is interestingly keen.—H. H. Coburn.

**TO WHOM IT MAY CONCERN.**

One of the most important transfers of noted winners was the sale of the Rocky River Poultry Co., of Deerfield, Ill., to the Lily White Poultry Yards, of Lincoln, Ill.

This sale includes all of the prize winning Rose Comb White Leghorns, as well as the good will of the Rocky River Poultry Co. Headquarters for the "Famous Phillips Strain" will hereafter be at Lincoln, Ill.

Hoping you will give my successor the same patronage you gave us, I am,

Yours truly,

FRED J. PHILLIPS.

Deerfield, Ill., Feb. 7th, 1913.

**TO WHOM IT MAY CONCERN:**

This is to Certify that we have this day sold to the Lily White Poultry Yards, of Lincoln, Illinois, our stock of Rose Comb White Leghorns, which includes all of our Prize Winners from our famous yards, together with the goodwill of the Rocky River Poultry Company.

ROCKY RIVER POULTRY COMPANY.

DO YOU WANT DAY-OLD CHICKS? SEE AD O PAGE 541

**WHITE ORPINGTONS**

Grand young and old stock fit for any breeding pens and at prices you can afford to pay. They are bred direct from my Chicago winners of the last three years. My pens are now mated and I have two that will interest any breeder in the country. Be sure to get my mating list before you book your hatching eggs. My winning of the big Silver Cup for the best display at Chicago, December, 1911, besides 1st pullet, 2d cockerel, 3d hen and 5th cock the year before, is ample proof of the quality of my stock.

Dr. Guy Blencoe, Vice-President Am. Alma Center, Wisconsin

**Norwich Automatic Exercisers and Feeders**

Installed in all of your breeding pens this Winter, will keep your breeders hustling from morning till night, and will compel them to lay more eggs, and stronger eggs, eggs that will hatch more livable chicks than ever before. They will cut your feed bills at least 25 per cent, and reduce your labor bills to merely filling the hoppers once a week. "The chickens will do the rest." They are all sold on thirty days' free trial, by responsible dealers everywhere, or shipped direct from Toledo, Ohio. Write today for free booklet describing them, and the name of your nearest dealer. Notice to Poultry Supply Dealers—We still have some choice territory open, and would like to hear from wide-awake dealers. Exclusive sale given to the right parties. Address

River Home Poultry Yards : 820 Monroe Street : Toledo, Ohio  
BREEDERS OF EXHIBITION QUALITY "LIGHT BRAHMAS" EXCLUSIVELY

**S. C. WHITE ORPINGTONS**

Canada's Best. Second to none in the World. Winners at the leading Canadian shows, also Madison Square, N. Y., 1913. Matings the best I ever yarded. Stock for sale. Prices reasonable. Send for illustrated catalogue. Wm. Moore, Munroe St., Hamilton, Ont., Can.

**GREENAN'S WHITE WYANDOTTES**

At Pt. Huron 1913—America's Quality Show. Won everything in sight, first and second cock; first hen; first cockerel 1911-1912-1913; first pen 1913; best display 1912-1913. Send for my mating list and see who has the winning kind. Fine breeding males \$5.00 to \$10.00. Book your egg orders now. **J. B. GREENAN, DECKERVILLE, MICH.**

**SILVER WYANDOTTES**

Ohio's Blue Ribbon Winners. They still lead as winners. At Cleveland with four entries won 1st pen, 1st and 2d hen and 2d pullet. Get your egg orders in early. A few breeders yet to dispose of. **G. F. STEWART, COSHOCTON, OHIO.**

**Our Vigorous, Free Range, Bred-to-Lay  
S. C. White Leghorns**

Are the kind you have been looking for. Eggs for hatching, \$1 per 15, \$5 per 100, \$45 per 1000. Chicks, big, vigorous, healthy fellows that will live and grow; March \$3.25 per 25, \$13 per 100, \$120 per 1000; April and May, \$2.50 per 25, \$10 per 100, \$85 per 1000. A few choice vigorous cockerels at \$1.50 and \$2 each. Catalogue free.

The Elliott Poultry Farm, R. No. 7, Mansfield, Ohio

**America's Best Wyandottes**

Golden, Silver and Whites—Winners of over 300 premiums at Madison Square Garden alone, and they won 4 firsts and other premiums and \$100 cup at this great show this year. They have won thousands of premiums at the leading shows, including Chicago, St. Louis, Buffalo, Boston, Philadelphia, Cincinnati, Cleveland and Columbus. We have a large stock of birds on hand and to move them quickly we will let them go at much reduced prices. Hundreds of grand cockerels and cock birds and plenty of fine females, either the finest exhibition birds or fancy breeders or utility flocks. Our matings were never so fine and contains over 300 winners. Mating list and large finely illustrated circular, showing 50 of our winners, free. Also Golden Seabright Bantams and collie pups.

**Ira C. Keller -- Brookside Farms -- Box 75, Prospect, Ohio**

**WOLFRUM'S S. C. WHITE LEGHORNS**

Won at Cleveland Great Fanciers Club Show, January, 1913, 1st cock, 1-2-5 hens, 1st ckrl, 1st pullet, 1st pen and best display on 10 entries. Never defeated in show room, bred from 196 to 238 egg hens, for fine combs, long backs, low tails, and blue-white plumage. Your name brings our egg matings.

George W. Wolfrum, Box 392, Carey, Ohio

**My Columbian Wyandottes Win Again**

CHICAGO, 1st cock, 1st hen, 1st and 2d cockerel, 1st, 3d and 4th pullet, 1st pen, 1st display.  
MINNEAPOLIS, 1st, 2d and 3d cockerel, 1st, 2d and 3d pullet, 1st and 3d hen, 4th and 5th cock, 1st pen, 1st display.  
ST. PAUL, 1st and 2d cock, 2d, 3d and 4th hen, 3d, 4th and 5th cockerel, 5th pullet, 1st pen.

**GEO. A. KERSTEN -- WASHBURN PARK -- MINNEAPOLIS, MINN.**

**Brinkley's White Ply. Rocks**

"The Great Armory Show," 1912, Louisville—Brinkley's White Plymouth Rocks won more 1st and 2d prizes than all competitors combined. More special prizes were awarded Brinkley's White Plymouth Rocks than all competitors combined.

"Jacksonville, Fla.," 1913—They were all there. The very best of them were there. Birds of the "Best in the World" strains and Owen Farms, also many other winning strains. Brinkley's White Plymouth Rocks made the greatest victory of the season, winning 1st and 2d cocks, A. P. A. medal for best male in the American class, 1st and 2d hens, silver cup for the best hen in the show, gold leg band for the best female in the American class, gold special for the whitest bird in the show, 1st and 2d cockerels, 3d and 4th hens, 3d prize pen.

**The Best in the South**

All these winners are mated in our 1913 grand matings. All regular matings, \$5.00 per 15. Special matings, \$10.00 and \$15.00 per 15. Utility eggs, \$10.00 per 100. Send stamp for beautiful mating list.

**W. J. BRINKLEY -- Box A -- IUKA, MISSISSIPPI**

**N. V. FOGG, MT. STERLING, KY.**

One of the largest and finest poultry farms in the South is that of N. V. Fogg, at Mt. Sterling, Ky. This farm consists of eighty-three acres, twenty acres of which are devoted entirely to his Single Comb White Leghorns, and the many fine buildings, and is situated on a high, sandy ridge, making the location one of the finest in the South. There is a never failing spring of the purest water on this farm from which water is pumped by a gasoline engine to his fine residence, and to all the buildings, including poultry buildings. Besides Single Comb White Leghorns of superior quality, Mr. Fogg's hobby is sanitary conditions and healthy stock, and the writer never saw cleaner or more convenient buildings. There are two houses, 12x50 feet and eight three-colony houses. The brooder house is 16x110 feet with a capacity of 3,300 chicks. Another 600-egg machine having been added since last year. In the year 1911, Mr. Fogg hatched eight thousand chicks and shipped thirty thousand eggs. In the year 1912, he increased the chicks to 10,000 and shipped 38,000 eggs. His Leghorns are winning all over the country in the hands of purchasers of stock and eggs, although he does not exhibit much himself, being so well established, he finds it unnecessary. He sells birds guaranteed to win in any show room and eggs to hatch winners. He does not put a price on his best birds, but furnishes a limited number of settings from them. He

**WHITE PLY. ROCK.**

The above is reproduced from an untouched photo of "Husky Jack," a 10-lb. 96-point cockerel that won at the Illinois State Fair, Quincy, Ill., and the Illinois State Show, Springfield, Ill.; bred and owned by Chas. A. Simmonds, Camp Point, Ill.

has never sold a bird guaranteed to win but what made good and backed his guarantee. Every bird in his breeding pens have been raised on range, and will produce chicks that will live. All baby chicks shipped are guaranteed and arrive in first-class condition (barring railroad wrecks, of course). Mr. Fogg has been breeding Single Comb White Leghorns for the past 11 years and has shipped thousands and thousands of baby chicks and has hundreds of testimonials from satisfied customers for stock, chicks and eggs. He has mated up eight hundred birds for this year's business, and it is a sight to see them singing, bustling and waiting for a turn on the nests. His White Leghorns are indeed white and of the modern type, longer backs and lower tails; head points excellent; five-point combs galore. Mr. and Mrs. Fogg are delighted to receive and entertain visitors, and if they telephone Mr. Fogg will meet them with a conveyance at Mt. Sterling. Write for a catalogue and mating list.—H. H. Coburn.

The Ideal Automatic Feeder and Exerciser and Dry Mash Feeder manufactured by the Miller Anchor Co., Norwalk, Ohio, have features of their own that are not found in any other make. The Ideal Automatic Feeder and Exerciser comes in twelve and twenty quart sizes with sparrow and rain guards. At the late Madison Square Garden Show this company sold one hundred and eighty. They advertise for good live agents to handle it.

**DR. GUY BLENCOE.**

Dr. Guy Blencoe, Alma Centre, Wis., has one of the finest up-to-date poultry farms in the Middle West. His farm consists of about five acres and his buildings are piped with city water. The doctor took up the S. C. White Orpington some six or seven years ago, and it is doubtful if there are any strains superior to his. He recently imported one of the finest and whitest heavy shanked cockerels we ever saw. He is a wonder and will produce some eye-openers. He also grabbed off the second prize, Crystal Palace (England) hen. This hen is a marvel and is without doubt, the finest in America. She is dead white, and type perfection in itself. This of course would be necessary to win at Crystal Palace. These two imported birds are mated in one special pen. The cockerel that the Doctor exhibited last year at Chicago, and that was conceded by the breeders and judges who know quality when they see it, regardless of the color of the ribbon, to be the best cockerel at the show, has molted out very white and heads one of the choicest pens. He is mated to dead white hens weighing 10½ lbs., and pullets in laying condition weighing 8½ lbs. You should see 'em! The Doctor furnished winners this season for about every show of importance in the Middle West, and by December 1st was sold down to immature stock except twelve birds that money cannot buy, for they form the nucleus of his choicest breeding pens, of which he has six. It is a solemn fact that nearly every pullet and hen in show condition went. He made shipments from Vancouver, B. C., to New Hampshire, and from Minnesota to New Mexico. Those immature birds are developed now and ready for the show room or the breeding pen. He has cockerels for sale weighing 11 pounds, and of fine type and not a trace of brass. For the past five years the Doctor has been breeding a line on the side to eliminate brassiness, and now has them without a suggestion of brassiness. Every setting of eggs booked before March first entitles the purchaser to 18 eggs, instead of 15 per setting when delivery is made. This includes eggs from his special pens, too. December, 1911, the Blencoe White Orpington now at Chicago, first, pullet; second, cockerel (which if it had been a few weeks older would have taken first hands down); third, hen; fifth, cock. Big silver cup for best exhibit. This article is, indeed, a poor attempt at describing the quality that the Doctor actually has. Write

to him and get more definite information direct from him. Look up his ad., and send for mating list. It is a fine one.

H. H. Coburn.

**J. C. FISHEL & SON'S MATINGS.**

J. C. Fishel & Son, Hope, Ind., are mating the finest pens of White Wyandottes ever mated by them, if you can conceive of such quality, as their meetings of previous years were as near perfect as they make 'em, "in the White Wyandotte business." They are mating up twenty pens, and the price asked for settings is \$10 straight from each and every pen. Pens 3, 4, 5, 6, 8, 11, 13 and 15 are headed by cock birds. Pens 1, 2, 7, 9, 10, 12, 14, 16, 17, 18, 19 and 20 are headed by cockerels. Cockerel heading Pen 1 was bred from a pair mating, and he is a grand bird in every particular. If you will order eggs direct from this article your dates will be promptly met—and it will enable you to get in on earlier shipments.

H. H. Coburn.

**U. R. FISHEL'S WHITE ROCKS.**

A display pen of The U. R. Fishel's (Hope, Ind.) White Plymouth Rocks were the admiration of all who attended the Great Quality Show held at Indianapolis Feb. 3-7, 1913. Finer White Rocks never saw the inside of a show room—words fail to describe them. Mr. U. R. Fishel mated up 50 pens of his famous White Rocks in November for the egg trade—the finest we ever saw—and started his incubators in the middle of December. Last season he had to return money for 10,000 baby chicks, so properly fortified himself for this year's siege by mating from 1,500 to 2,000 for the baby chick trade. U. R. Fishel, Jr., is a boy six years old, and a member of the A. P. A. He won on White Cochins bantams at Indianapolis February 3-7-13, first cock; special for best cock; second, hen; third and fifth, cockerel; one pullet, one pen; special for best cockerel pen; cock special and special for whitest bantam in the show. Mrs. U. R. Fishel's White Indian Runner Ducks won at Indianapolis; first-third, cock; first-second, hen; first-second, cockerel; third-fourth, pullet; first pen; 10 pens mated for egg trade. Last season Mrs. Fishel returned \$600 in orders for stock and eggs in one day.

"Fishel's Frank" was on exhibition one

day at the Indianapolis show and people came for miles to see him and he proved a good ad. for the show. Fishelton is an eye-opener for those who visit there. It cannot be overdrawn in description.

H. H. Coburn.

**THE ZANESVILLE, OHIO SHOW.**

The sixth annual show held by the Zanesville Fanciers' Association was held in the Armory Memorial building, Jan. 29-Feb. 1, 1913, and was more than ever a success. The association consists of progressive, live wire men who make whatever they undertake a success. The president is H. G. Peach; vice-president, T. W. Rice; secretary, Frank C. Chester; treasurer, G. R. Nichols; superintendent, W. G. Vanderbark. The board of directors are the same men, and L. E. Ballinger, G. W. Leasure, G. C. Lowary, T. W. Rice and S. H. Smith, all of Zanesville. The attendance was large, the entries well filled and the quality fine. The cash premiums were promptly paid. Many beautiful cups were given. The officers filled their respective places to the satisfaction of all concerned. Owing to the death of Judge Lane, H. H. Coburn placed the awards. Every Ohio breeder should plan on Zanesville for next year.—H. H. Coburn.

**WAHEBE BANTAMS.**

The Wahebe Black, White, Buff and Partridge Cochins Bantams made a most wonderful record at two of our greatest shows the past season. At Louisville, Ky., December, 1913, they won on Blacks—1, 2, cock; 1, 2, hen; 1, 2, cockerel, and 1, 2, pen. On Buffs—1, 2, cock; 1, 2, 3, hen; 1, 2, cockerel; 1, 2, pullet; 1st, old pen, and 1st young pen. On Partridge—1, 2, cock; 1, 2, hen; 1, cockerel. On White—1, cock; 1, 2, hen; 1, 2, pullet; silver cup for best display of bantams. At Indianapolis, Jan. 11-17, 1913, every bantam entered received a place as follows: Blacks—1, 2, cock; 1, 2, hen; 1, 2, cockerel; 1, 2, pullet, and 1st, pen. Buff—2, 3, cock; 1, 4, 5, hen; 2, cockerel; 5, pullet; 1st, old pen. Partridge—1, cock; 1, 2, hen; 1, 2, pullet; 1, 2, cockerel. White—1, 2, cock; 1, 2, hen; 1, 2, cockerel; 1, 2, pullet. Silver cup for best display of bantams winning fifteen out of a possible eighteen firsts. The Wahebe Cochins Bantams have the largest show record of any strain.—H. H. Coburn.

**R. D. OWENS, CRESTON, OHIO.**

Mr. R. D. Owens is an exclusive breeder of the very best Silver Laced Wyandottes and has given the mating of this breed very much study and put in a lot of work experimenting with special matings, so now has a system established that never fails. He keeps tab on every bird and knows just how it is bred and just what it will produce when mated a certain way. He gets some of the greatest lacing ever produced. It is not how many with Mr. Owen, but how good. His matings are a pleasure to the eye and are even better than last year's. If you want to see for yourself, go and visit him. You will never forget the impression his Laced Wyandotte will make on you. The birds win wherever exhibited. Get in correspondence with him and try some of his Silver Laced Wyandottes or eggs from them.—H. H. Coburn.

**LOW PRICE PLUS HIGH QUALITY.**

Never before since incubators and brooders are so universally in use has so much quality of material, so much carefulness in the construction been offered at such low prices in incubators and brooders as is now being done by the Des Moines Incubator Co., of Des Moines, Iowa. This firm is now entering their nineteenth year of business and is enjoying a greater demand for their incubators, brooders and supplies than ever before. This is no doubt due to their everlasting ambition to retain the good will of their customers by giving more than value received for their money, their very reasonable prices and their wonderfully successful hatchers and artificial mothers. It would prove a good investment for you to send for their 128-page beautifully illustrated catalog, which is full of incubators, brooders and chicken facts. This great book is sent free if you mention name of this paper.

**J. H. McDANELL, WARSAW, KY.**

The fine poultry farm of J. H. McDanell is located one mile out of Warsaw, Ky., and contains 400 acres of bottom land on the Ohio river in the blue grass section. All of his buildings and stock are on the farm and Mr. McDanell lives in Warsaw. He is one of our oldest breeders of the Grand Columbian Wyandottes, as well as being among the pioneer breeders of the beautiful Golden Laced Wyandottes. He is

an acknowledged authority on the mating and breeding of these two varieties and has the finest in the country. His Columbians can beat Light Brahmas in markings and no Golden Laced Wyandottes are laced better than his. They have won all over the country for him and for his customers. Some of his recent winnings are as follows: Chicago, on Golden Laced Wyandottes, cock 2, hen 1, cockerel 1, champion cockerel 3, 4, pullet 1, pen and best display. Colum-

Dr. G. G. Billman,  
Breeder of Houdans, Evansville, Ind.

blans—2 pullet, 3 cockerel, Louisville, Ky., Dec. 23-27, 1912, Golden—1 cock; 1, 2 cockerel, 1 hen, and 2 pullets, Columbians—1 cock; 1, 2 cockerel; 2 hen; 1, 2 pullet; 1 pen. Club cup for best display. Cincinnati, Jan. 23-29, 1913, Golden—1 cock; 1 hen; 1, 2 cockerel; 1 pullet. Cup for best display. Columbians—1 cock; 2, 3

cockerel; 1 pullet, on three entries. Pittsburgh, Pa., Golden—1 cock; championship male; 1 pullet; 3, 4 cockerel; 1 pen. Club cup; \$50 best display; two \$25 silver cups, National Club meeting. Mr. McDanell has mated 11 pens of the best Golden Laced Wyandottes that exist, and containing the above prize winners and others bred the same, and nine pens of very fine Columbians for the coming egg trade. Write for mating list.—H. H. Coburn.

**THE GREAT CLEVELAND SHOW.**

The Eighth Annual Show given by Cleveland Fancier's Club was held Jan. 20-25, 1913, in the Central Armory. It was one of the greatest shows of the season, and as there was a dog show in connection, it made it doubly interesting. The classes in poultry were well filled and the quality was better than ever before, which is putting it pretty strong, as the best birds raised are exhibited yearly at these shows. The Rocks, Rhode Island Reds, Orpingtons, Campines, Leghorns and Wyandottes were especially strong. Judge Drevenstedt said there was more quality in the Buff class than at Boston and New York combined. This association is composed of reliable men of ample financial backing and the premiums are always ready. This association gives the finest trophies of any association, the business men responding most willingly. The officers are: John Zipp, president; Chas. McClave, New London, Ohio, C. A. Otis, Jr., G. E. Conkey, A. G. Clark, vice-presidents; J. T. Conkey, secretary and treasurer; Eugene Sites, general superintendent; John H. Kramer, superintendent of pigeons. The poultry judges were: J. H. Drevenstedt, Clarence King, Thos. Faulkner, Chas. McClave, H. P. Schwab, and Richard Oke. Pigeon judge, Theo Taubert.—H. H. Coburn.

The Wendell Incubator Company, of Holly, Mich., have been advertising in the columns of American Poultry Journal for several years, and during this time have given their customers entire satisfaction and their money's worth in their incubators, brooders, brooder hovers, feeders, feeders and exercisers, non-freezing fountains, oats sprouters, trap nests, grit and shell boxes, etc. This company manufactures all practical and useful articles used on the average poultry farm. Send for their catalogue and secure some of their up-to-date articles.

**White and Partridge Plymouth Rocks**

Chicago, Milwaukee, Racine 1913 Winners.

We have mated 12 pens of White Rocks and 6 pens of Partridge Rocks for the egg trade. Every pen is carefully selected and will produce birds of type and quality that will satisfy the most fastidious breeder. Remember that the prizes our birds won were won in the strongest competition at Chicago, against such breeds as Owen Farms and Guy Daily. Send 3 red stamps for our handsome new catalog just off the press. It will convince you that we have the goods and sell them at living prices.

**PETER OLLE -- R. F. D. 4, BOX 110 -- RACINE, WISCONSIN**

**ORPINGTON FOWLS AND DUCKS**

Winner at Grand Central Palace

Winners at Madison Square and Grand Central Palace, N. Y. My birds are all descendants from prize winners, and my recent "victories" at these two most prominent shows in America should convince you that I have "quality" that will please you. A few special bargains in trios and pens at this time.

**ON 11 BIRDS SHOWN AT THE PALACE 10 WERE IN THE MONEY  
ON 14 BIRDS SHOWN AT THE GARDEN 7 WERE IN THE MONEY**

These prize winners are all in my yards and are mated for the egg trade. Plenty of grand pens to select from. Superb matings, \$5.00 to \$15.00 per 15. Excellent quality for the price.

**Buff Orpington Ducks**

Madison Square winners. I won 1st pen, 2d young drake, 2d young duck and 3d pen Grand Central Palace. I have as fine a flock of these most wonderful layers and money makers as can be found anywhere. Having a flowing stream insures my duck eggs being fertile. Duck eggs only \$3 to \$5 per 11. Write for prices on Baby Chicks. Catalog and mating list free.

**F. B. CRAWFORD BOX 115-A RAHWAY, NEW JERSEY**

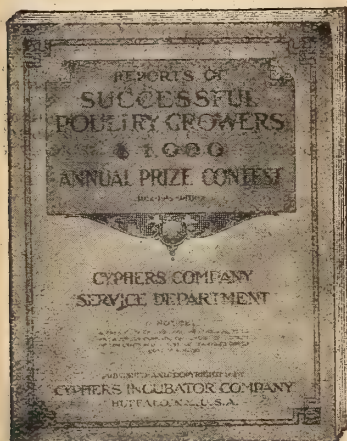

**\$1,000 PRIZE REPORT BOOK.**

The following quotation is from a letter just at hand from Grant M. Curtis, President of Cyphers Incubator Company, Buffalo, N. Y.:

"At last our company has succeeded in publishing a book, the contents of which cannot fail to be of immense practical value to the thousands of men and women who are deeply interested in learning how they, as individuals, can make money in the poultry business, on either a small or large scale, by taking advantage of local opportunities—by improving home conditions.

"Fifteen months ago we offered \$1,000 in cash prizes for reports of actual records of personal success in producing poultry and eggs for sale, either for table use, or to be used as breeders or for hatching purposes. The first prize was \$200, the second prize \$100, the third prize \$50; then there were ten prizes of \$20 each, twenty prizes of \$10 each and fifty prizes of \$5 each—a total of eighty-three cash prizes.

**GET THIS FREE BOOK.**  
Contains 180 pages, 7½x10 inches in size. Many helpful pictures. Gives facts, figures and actual experiences.

"As a result of this offer, more than two hundred bona fide reports were received in competition and now the eighty-three prize-winning reports have been published in a large book of 180 pages—size of pages, 7½x10 inches, and there are many illustrations, including portraits of nine out of ten of the authors themselves.

"These reports are not devoted to big hatches made with incubators or to extra good luck met with in brooding chicks. What they do tell about, and the basis on which the eighty-three cash prizes were awarded, is this: "These prizes are to go to the poultry raisers—men and women—who write us, in their own words, the best and most helpful reports of their individual successes in raising poultry for profit by improving their personal opportunities, by taking advantage of local, home conditions. What we want are reports of actual work done, of favorable results achieved, of profits made, on either a small or large scale."

Herewith is shown a picture of the front cover of this remarkable book, and, as above stated, a free copy will be sent to any reader of this poultry journal on request, who will forward ten cents in stamps to the publishers—to cover cost of mailing. The book itself is free, and Mr. Curtis says that in his judgment it would be cheap at \$2.00 per copy, if a fair selling price were placed on it. Get your free copy. Reader, and judge for yourself.

Address Cyphers Incubator Company, Home Offices, Buffalo, N. Y., or the company's branch store and office nearest you, as follows: New York City, N. Y., 23 Barclay St.; Boston, Mass., 12-14 Canal St.; Chicago, Ill., 329-331 Plymouth Court; Kansas City, Mo., 317-319 Southwest Blvd.; and Oakland, Cal., 2127-2131 Broadway.

Mr. Ernest B. Rogers, who recently sold all of his White Orpingtons to The Aldrich Farms and agreed to stay out of the advertising game for a year, is getting started for next year's business. When at Cincinnati, I saw a letter announcing the exporting of eight females from England, for which Mr. Rogers gave \$1,600. He had two display pens at Cincinnati, Nos. 2 and 3. The male heading one pen was a Crystal Palace winner.

**BUFF ORPINGTONS, BLACK MINORCAS**

Now as the hatching season is beginning and you surely want to buy the best stock that you can get for the money, we will quote you a few of our winnings in four state fairs in competition with the large Eastern breeders.

**In the S. C. Buff Orpington Class**—At the Nashville State Fair we won: 1st hen; 2nd cock; 2nd pullet; 3rd and 4th cockerel; 3rd and 5th pen; 5th cock. Also a special premium on the hen for being the best in the fair. At the Alabama State Fair we won: 1st cockerel; 2nd cock; 2nd hen and 2nd pullet. At the Mississippi State Fair, one of the largest ever held in Jackson: 1st cock; 1st hen; 1st and 3rd cockerel. At the Louisiana State Fair we won: 2nd cock; 3rd hen; 3rd cockerel.

We have the nicest lot of S. C. Black Orpingtons which were not exhibited, this year.

**In the S. C. Black Minorca Class**—At the Alabama State Fair we won: 1st, 2nd and 4th cockerel; 1st, 2nd, 3rd, 4th and 5th pullet; 1st and 2nd cock; 2nd, 3rd and 4th hen; 1st and 2nd pen. Also a premium for best display of Aseatics At the Mississippi State Fair we won: 1st, 2nd and 3rd cockerel; 2nd and 4th pullet; 2nd hen; 3rd cock, and 1st pen. Louisiana State Fair: 1st and 2nd cock; 1st, 2nd and 3rd cockerel; 1st, 2nd, 4th and 5th pullet; 2nd hen; 1st and 2nd pens.

This should be evidence that we have stock or eggs that you are looking for. We have the largest and best equipped poultry farm in the South. You do not have to go East for eggs for hatching season, taking chances on the climate where you can get them just as good for possibly less money. All our stock are free range. They are up to the standard in weight, type and color. Correspondence solicited. Day old chicks only when ordered.

## NEW YORK POULTRY FARM

Baby Chicks, Eggs for Hatching, Rhode Island Reds, Buff Orpingtons, White Leghorns.

Eggs \$2.00 and \$3.00 per 15, \$10.00 per 100.

Chicks \$13.00, \$15.00 and \$20.00 per 100.

Utility Chicks \$11.00 per 100.

**W. J. Trapp :: Gloversville, New York**

## JEFFERSON'S White Runners

Win where quality counts—never defeated. At the greatest show held at Madison Square Garden, Dec., 1911, our ducks controlled the highest winnings. Our winnings include 1st cockerel, 1st pen, second pullet.

At Southern International Show, Atlanta, Ga., Dec. 16-21, 1912, our Madison Square Garden 1st cockerel won first cock. Also won 1st cock at Savannah, Ga., Nov., 1912. This winning cock is without doubt the greatest white runner in America. He heads our all-prize pen this season. These great ducks, together with our other prize winners, place Jefferson's White Runners far in the lead. Our string of winnings at Chicago, Cleveland and Savannah include many firsts.

Eggs, \$5.00 per 12, \$8.00 per 24, \$15.00 per 50, and \$25.00 per 100. Why pay more, we guarantee satisfaction. Stock for sale.

**Jefferson Poultry Farm, Albany, Ga.**  
Citizen's First National Bank Bldg.

## A NEW ADVERTISER.

In this issue will be found the advertisement of Peter Olle, of Racine, Wis., who comes to us highly recommended. Mr. Olle will have one of the most modern poultry farms in Wisconsin when he completes his buildings. This farm contains 15 acres of land just out of Racine, Wis. When Mr. Olle purchased this farm there was a brick building formerly used for a cabbage store house, but new, 30x141 feet, inside measurements, and having a brick wall, with two dead air spaces, 24 inches thick. This building is being remodeled into a breeding and laying house on the double deck plan and will have a capacity of 2,000 layers. We visited this farm on February 13th and at that time his pullets were laying fine. Mr. Olle breeds White Rocks, Partridge Rocks and Golden Laced Wyandottes, and as he is a man of means, he purchased the best in the country to start with. He is too shrewd a business man to do otherwise, and he certainly has some fine birds. He is mating up 12 pens of White Rocks, six pens of Partridge Rocks and four pens of Golden Laced Wyandottes.

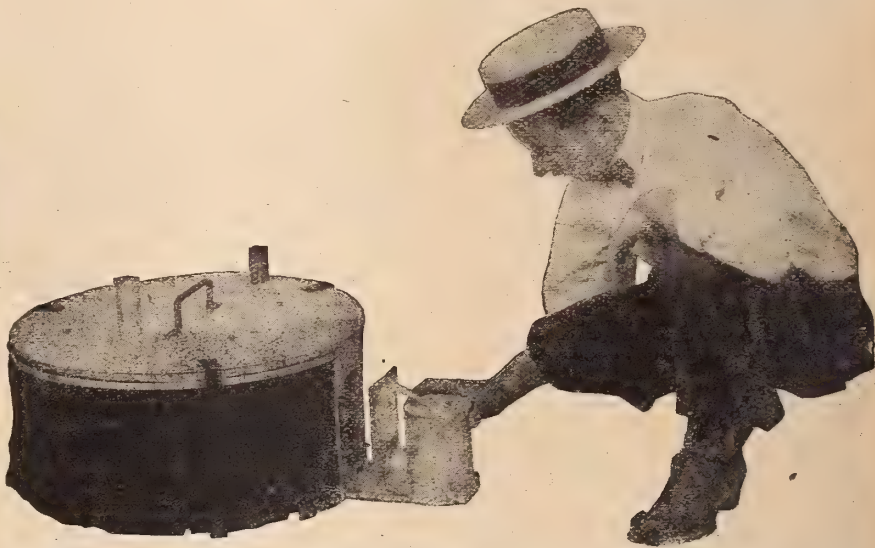

In December his White Rocks won in competition with Owen Farms and Daily 4th cock, 4th cockerel, 5th hen, 4th pullet. At Milwaukee 1st and 3d cock; 3d, 4th and 5th cockerel; 2d and 5th hen; 2d and 3d pullet and two silver cups. At Racine, 1st, 2d, 3d, 5th cock; 2d, 4th, 5th cockerel; 1st, 2d, 3d, 4th, 5th hen; 1st, 2d, 3d, 5th pullet; 1st, 2d pen. On Part-

His whole flock of youngsters last year were dark and rich in color, and this year they are even better, and he has reserved the best of both years for his matings, including his Cleveland and Youngstown winners, and he believes as good results will be obtained from these matings as from matings of other breeders who ask twice as much for their eggs. Send for mating list and mention American Poultry Journal.—H. H. Coburn.

## AN INTERESTING OFFER.

The checkerboard bag has come to be a byword for quality poultry feeds. The marvelous success that has always greeted this brand of feed is due not only to the high standard of quality that has been maintained, but to the accurate knowledge of the poultry raisers wants. The Ralston Purina Company's latest offer is found on another page of this issue and consists of two galvanized iron drinking fountains which will be delivered at half price to any poultry raiser who is using Purina Chicken Chowder, the great egg producing mash and growing feed. A fountain of this type sells for 25c at any supply house, but Col. Purina will deliver two for 25c and a coupon clipped from a Checkerboard Bag.

This offer is made to induce poultry raisers to try Purina Chicken Chowder as a growing feed for baby chicks. Chicks should have a separate fountain which may easily be filled and cleaned. The Purina galvanized iron fountain is serviceable and practical. Our readers will make no mistake by send-

Removing the Lamp from the Ideal Hover Manufactured by the Duplex Incubator Co., Tremont City, O. The lamp is removed or pushed into place with one hand. The Oil Fount is outside of Lampbox and oil is always cool and they Guarantee this Lamp to never smoke. Another important feature is the Double Drum Heater producing 15% more heat than the Single Drum Heater from the same amount of oil. The Ideal just sets on the floor any place, and if interested in a Handy, Neat, Safe and Low-priced Brooding Device look up their Advertisement, and mention this paper when writing them.

ridge Rocks at Chicago, December, 2d cock. Milwaukee, 1st cock, 2d pullet, 1st cockerel. Racine, 1st, 3d cockerel, 1st cock, 1st, 3d hen, 2d pullet, 2d pen; silver cup. Golden Wyandottes at Racine, 1st, 2d cockerel, 3d cock, 3d, 4th hen, 2d, 4th pullet, 1st pen, silver cup for best display. Look up Mr. Olle's ad. which is appearing for the first time in American Poultry Journal and send for his beautiful new catalogue, that Mr. Stahmer is getting out.—H. H. Coburn.

## MAKING GOOD.

Last year when M. C. De Loff, Wiloughby, Ohio, wrote the introduction to his mating list he said he had lived for the past ten years in close touch with some Red breeders of the advanced school, thereby getting some valuable pointers, and that he should devote all of his attention to birds and produce a superior quality of Rose Comb Rhode Island Reds. Just how near he came to making good the reader can judge. At the Ohio State meet at Youngstown, an early show and before some of his best young stock was fully developed, he won on eight entries—1st and 5th cock, and shape special; 2d and 3d cockerel; 3d pullet; 5th pen. At Cleveland Jan. 20-25, 1913, on three entries he won 1st pen and 2d cockerel.

All of De Loff's Reds are of that even, dark, rich red so characteristic of the Bean blood from which his birds are bred.

ing for two. Every poultry raiser should also have a copy of the 1913 Purina Book, containing space for daily egg records, cures of diseases, breeding and feeding charts, plans of houses, etc., etc. A copy will be sent free to any reader of the American Poultry Journal.

## THE AUTOCRAT SINGLE COMB RHODE ISLAND REDS.

Another successful woman fancier is Mrs. Jennie Warren, Mentor, Ohio, who breeds Autocrat Single Comb Rhode Island Reds. Mrs. Warren is a person of detail and one whose motto is, "Be sure you are right, and then go ahead," so she made the right start, by starting right by purchasing the best to be had for her foundation stock. She selected the Crowther strain of males, males of superb type and wonderful deep, rich, brilliant red, so characteristic of the Crowther males. The males are sired by Aristocrat. The foundation females were of the famous Tompkins strain, now scientifically blended into the Autocrat strain of Single Comb Reds. She has mated up some special matings headed by prize winning males and will spare a few settings of eggs to those who order early. Mrs. Warren's mating list is very frank and modest in its statements. Send for one and purchase some eggs from the Autocrats.—H. H. Coburn.

## PARSON'S POULTRY PLANT.

At Avon Lake, Ohio, 90 miles from Cleveland, Ohio, is located Parsons Poultry Plant. It is most modern and practical and contains 30 acres of undulating land with a gradual slope southward. The buildings are modern and constructed on the open-air front plan. The main laying and breeding house is 15x100 feet, special mating house 25x40 feet, conditioning and wash room building is 20x30, feed room and brooder house leading from it. The incubator cellar is under the residence. The Parsons raise many chicks with hens and use 10 colony houses on the farm. They specialize in S. C. White Orpingtons and R. C. Rhode Island Reds. They have imported a great many White Orpingtons for their start in this grand and popular breed, but can home-grow them now so as to defeat imported birds in the show room as they did at the late Cleveland Show.

At the Toledo Show Jan. 6-12, 1913, they won on Orpingtons 1st, 4th cock; 1st, 3d hen; 1st, 2d cockerel; 2d, 4th pullet, on eight entries. On R. C. Reds on two entries, 2d cock. At Cleveland, Jan. 20-25, 1913, on Orpingtons, 3d cock; 3d hen; 3d cockerel, on four entries. On R. C. Reds, 2d cock, on one entry.

They are mating eight very choice pens in R. C. Reds and seven pens of S. C. White Orpingtons for the coming egg season. If you want to infuse new blood try some settings, for they have the eggs and will deliver them. Write for mating list and mention American Poultry Journal.—H. H. Coburn.

## BULLINGTON'S ORPINGTONS.

It will be remembered that F. S. Bullington, Richmond, Va., was among the very first to take up the S. C. White Orpington, and his blue ribbon strain is the leader to-day. He has been re-elected the club secretary and is also president of the Virginia State Poultry Association and secretary of the Virginia branch of the A. P. A. Mr. Bullington lives in a suburb of Richmond and has a farm of 10 acres where he mates up his birds and raises some of his Orpingtons, but farms out all the eggs among farmers, and his stock is all raised on range.

His noted hen, "Bettie," has won 11 blue ribbons, two silver cups and many specials. He has many individuals who have won from three to ten blue ribbons. This past season he has sold winners for 11 leading shows and received several reports from last season's egg customers of winnings made by stock hatched from these eggs. He exhibited at three shows and won 15 first prizes out of a possible 16 with eight cups and A. P. A. specials.

Write for new mating list which describes the wonderful matings and shows cuts of three winning males and others.—H. H. Coburn.

## E. H. LICHTENWALTER, GIRARD, PA.

The following letter lately received explains itself:

Girard, Pa., Jan. 20, '13.

Dear Mr. Schwab:

I am very much pleased to inform you that the American Buff Plymouth Rock Club at their annual meeting held at Springfield, Ill., elected me president of the club. I highly appreciate this honor, and through you and the A. P. J. wish to thank all friends and to urge all breeders to give the club its best support. Thanking you in advance, I remain, for more and better Bufts, Your friend,

E. H. Lichtenwalter.

Note—We were glad to get this news and to publish it, for Mr. Lichtenwalter is a most capable man and breeder. He is one of the "Old Guard" and original Buff breeder and has been their reliable champion from the first. In electing him the club has honored itself and paid tribute to a most worthy man. We congratulate both and wish them every success for the future.—H. P. Schwab.

Loyd & Son of Greensburg, Ind., have just cause to feel proud of the classy show record their Partridge Plymouth Rocks have made this season. It will be remembered that last year, they cleaned up to the queen's taste at Cincinnati, Indianapolis and innumerable shows in the hands of customers. At the Indianapolis Show, January 12-17, 1913, they won 1st pen in a class of six pens, 2 cockerel, 2 pullet, 5 hen, 4 and 5, cockerel. This firm is one of the largest specialty breeders of this very popular variety of Plymouth Rocks. Write for full particulars and mention American Poultry Journal.

## Canada's Best S. C. &amp; R. C. Black Minorcas

Have proven themselves America's Best, which is the "Best in the World" at the American Black Minorca Club Show two years in succession, 1910-1911 and 1911-1912. They won the Director's \$50.00 Cup for best collection. Eggs for hatching from the best pens of Black Minorcas that were ever mated.

T. A. FAULDS, LONDON, ONTARIO, CAN.  
PRESIDENT OF CANADIAN BLACK MINORCA CLUB

A. J. Fell, Box J, West Point, Pa.

## LESTER TOMPKINS' R. I. REDS

The originator of this famous strain that has made the Reds one of the most popular breeds of fowl on earth, always at the front both in the show room and laying contests. My recent winnings at Madison Square Garden and Boston prove they are still in the lead, winning display special at both shows, 1st hen in both combs and all female shape specials at Garden, 1st cock and shape special in single comb. Also all display specials and state cups for both combs at recent Boston show against birds that had been considered unbeatable. My breeding pens this season are simply grand. Prices right.

ROCKLAND I

## WITH OUR ADVERTISERS.

H. H. Coburn.

Mrs. J. H. Harnley of Zion City, Ill., is a woman of much force of character and a determination to succeed in whatever she attempts, and she really has "arrived" with her Quality Single Comb White Orpingtons, as few poultry farms have the quality she has in her yards. Her farm is very complete and up to date for it takes a woman to plan details. When Mrs. Harnley entered the fancy poultry business, it was in the spring of 1909, and she started with one hundred dollars worth of Kellerstrass' thirty dollar's per setting eggs. The following spring, she purchased three more settings of Kellerstrass' best eggs, and that same season imported a cock, hen and pullet from the best yards in England, together with another hundred dollars worth of eggs (from England's best). During the season of 1911-12, she introduced some of the Owen Farms best blood by purchasing six very high class birds. Later, she purchased eleven first prize winners, among which is Cleveland's first prize champion cockerel and winner of the \$50 championship cup. This bird is now a twelve-pound cock and heads one of her pens. Last but not least, Mrs. Harnley purchased the entire flock of famous Single Comb White Orpingtons from Geo. Greenwood of Lake Mills, Wisconsin, and by so doing, secured the sire, dam, brothers and sisters of the first prize cockerel at the Great Chicago Show, December, 1912. Mrs. Harnley, is a thorough fancier, and her ability to mate White Orpingtons to produce winners is unexcelled. She has mated up twenty pens for the egg and baby chick trade for this season. Write her for further information and mention American Poultry Journal.

Some very excellent Single Comb Rhode Island Reds are bred and raised at the E. W. Golby poultry plant, located at Willoughby, Ohio. Mr. Colby understands how to mate Reds to produce good ones. The Colby Reds are long in back and are beautiful in color with sharp black points. Looking th whole flock over, one is impressed by the striking uniformity of color and their fine head points. They are raised on range consequently are very vigorous and healthy. In fact, there is a very limited number of invalids among them. They are too busy to be puny. The Colby Single Comb Reds have started in right to make a very classy show record for themselves. At the Ashtabula, Ohio Show, they won in a large class of good ones, 1 cockerel, 3 pullet, 2 hen and 2 pen. At the Cleveland Show January 20-25, 1913, in the best class ever shown in that city, they won 2 cockerel, 2, 3. pen. The Colby matings are hard to beat and those wishing to raise

winners will do right by ordering eggs from them. You will be treated right and get more than your money's worth. Look up ad and write for mating list.

F. M. Clemens, Mechanicsburg, Ohio, originated the beautiful variety of Plymouth Rocks and to-day is the largest breeder of them in the world. He breeds them whiter on backs than Light Brahmas and the hackles and saddles of his males can make most any breeder of Light Brahmas green with envy. The wings are equally as fine. The females have the same superior quality as the males. Both sexes are of correct Plymouth Rock type. These birds have a long show record win-

First Prize Cockerel, Chicago, 1912

Owned by Frank Myers, Freeport, Ill.

ning all over the country. Mr. Clemens is mating up the best pens he ever mated, heading them with prize winning males, that will produce scores of high class exhibition birds. He has a few choice breeders left and cockerels that will make great show birds as cocks. Try a pen mated by Mr. Clemens and go after the ribbons next show season. Mr. Clemens is first vice president of the Columbian Plymouth Rock Club and it is needless to state he is integrity itself. Write for mating list and look up ad in this issue.

One of the attractions of the Great Quality Show at Indianapolis, Ind.; Jan. 12-17, 1913, was a display of ten of Bruce & Ab-

bott's Single Comb Buff Orpington cockerels of Whiteland, Ind. It is doubtful if any breeder could equal them in evenness of color and that color a beautiful golden buff to the skin. This firm's buffs are strong on color and type and have the best blood lines of any strain in the country. Some of the winners in competition at this show, were hatched from eggs from the yards of Bruce & Abbott. Write for full particulars and mention American Poultry Journal.

Mr. A. E. Martz, Arcadia, Ind., had a display at the Indianapolis Show, Jan. 12-17, 1913, of one pen of his Single Comb Buff Orpingtons, consisting of one male and six females, all of the same shade of beautiful golden buff and as near alike in color and type as peas in a pod. The male was one continuous shade of golden buff, and is without a rival. When it comes to putting golden buff together with golden buff to produce golden buff, A. E. Martz is without a pier. This display pen was one of the attractions of the show. If the females laid every hour of the day, instead of nearly every day for days in succession, he could sell every egg at his own price. Mr. Martz will spare a few settings from this pen, as he has nothing on the side too good for his patrons.

W. F. Zimmerman is located at Willoughby, Ohio, the town of good Reds. In that town, it is Reds to the right of you, and Reds to the left of you, so Mr. Zimmerman had opportunity to take a post-graduate course of which opportunity he availed himself and started in the business right. He is an enthusiastic and true fancier and is an adept at handling the utility end of the business also. His Reds are of the long back type and are of an exceedingly fine shade of deep, brilliant red. His plant is practical and up to date and he hatches with the incubator and hens. His Rose Comb Rhode Island Reds won at Cleveland, January 20-25, 1913, 2, 3 pullet in the largest and best class ever shown in that city. He has mated up some very choice pens and will spare a limited number of settings. If you want to get in on these, order early. Send for mating list.

At the Great Quality Indianapolis Show, February 3-7, 1913, The Buschman, Pierce Rose Comb Reds won 1, 2, 3, 4, cock, 1, 2, 3, 4, 5, hen, 1, 2, 3, 4, cockerel, 1, 3, 5, pullet, 1, 2, old pen, 1, 2, young pen, 1 mixed pen. Silver Cup for best display. \$100 Silver Cup for best display in any variety. On Single Comb Reds they won 1, 2, 3, cockerel, 1, 2, hen, 1, 2, pullet, first old pen first mixed pen, second young pen and five Silver Cups. This string of Rose Comb Reds were all different birds, except one hen, from the ones shown at Chicago. This firm is mating up 35 pens of the Rose Comb Reds and every pen is headed by a

# Barred Plymouth Rocks

The "Hoosier Strain" Barred Plymouth Rocks scored another sweeping victory at the Big Cincinnati, Ohio, show Jan. 23-29, 1913, winning best display, five silver cups, gold special for champion male, etc. We had twice as many points for best display as any competitor. This phenomenal winning added to our record of first cock at Chicago, Dec., 1911, second and third cocks and fifth pullet mated pen Chicago, Dec., 1912, five first and four second prizes at Indianapolis in 1912, is final proof that there is no better strain. **Eggs for Hatching:** Our pens are the best we ever mated and contain more National Show winners than the same number of pens owned by any other breeder in America and will produce the winners for next season's big shows. Prices for Eggs, \$1.50, \$5 and \$10 for 15. A few choice breeding birds for sale. Send for mating list.

## WHO HAS THE BEST WHITE ROCKS?

Write today for special bargain mating list and sheet of winnings, which are sent free. Also send 10 cents for illustrated catalogue, which will tell you all about

### Halbach's Stay-White Strain White Plymouth Rocks

They won more than 68 other prominent breeders at such shows as the National White Rock Club Show, Chicago, Milwaukee (Fair), and Detroit. This record is far in advance of any other. It should assist you in purchasing your eggs and stock for new blood and foundation stock as well. Remember they hold the world's record by winning **BEST DISPLAY at CHICAGO** four times. A grand lot of breeders left. The kind that will produce you winners. Utility birds in quantity. The quick growing, heavy laying, big paying kind. Eggs from the best matings, \$15.00 per 15. Utility eggs, \$10.00 per 100. Just write today and be convinced of quality. Have anything you need and know that I can more than please you.

**H. W. Halbach, Box A, Waterford, Wisconsin**

winner and seventeen Single Comb Red pens, every one headed by a winner for the egg trade. In both varieties the color runs as even as peas in a pod. This is the largest Red farm in the world.

R. I. Armstrong's Single Reds won at Columbus, Ohio, Jan. 13-18, 1913, in a very strong class—first cockerel and color special. This cockerel was one of the attractions of the show. Mr. Armstrong will mate up six very choice pens, and from them raise all the youngsters. His birds are very healthy, and consequently the eggs very strong in fertility. The Armstrong Reds are great in type, having long backs and tails carried at the proper angle, and when it comes to color the Armstrongs' Single Comb Rhode Island Reds are the Reds that are red. Mr. Armstrong ships stock and eggs to all parts of the United States. He aims to have all business relations pleasant, and he seldom gets any complaints. Write him for cockerels bred like the first prize Columbus cockerel. Address R. I. Armstrong, 1054 Sullivan ave., Columbus, Ohio.

At Columbus, Ohio, Jan. 13-18, 1913, the Sheffield Farms, of Glendale, Ohio, made the following winnings on their Premier Partridge Wyandottes. Cock, first, second, third; cockerel, first, second, third; pullet, first, second, third; hen, first, second, fourth; pen, first, second, third. At Madison, Wis., Partridge Wyandotte Club meeting, fourth-fifth, cock; fourth-seventh, cockerel; second-third, hen; fourth, sixth, seventh, eighth, pullet; first, second, fifth, pen. These, added to their long list of former winnings at Madison Square Garden, Hagerstown, Boston, Cleveland, Chicago, and all other leading shows year after year, makes it the longest and best of any existing strain of Partridge Wyandottes.

The Blue Ribbon Poultry Farms' world's champion Single Comb Black Orpington cock bird was on display at Indianapolis, Ind., Jan. 12-18, 1913, and was the marvel of all who saw him. He is, without question, the best Black Orpington male in existence and was bred and raised by Mr. Carter, who does not have to buy nor import his famous winners. This wonderful cock bird holds more blue ribbons than any known Single Comb Black Orpington. He will be mated to six of the classiest females at Blue Ribbon Poultry Farm, Columbus, Ind. A very limited number of eggs to spare from this mating.

E. W. Grove's Single Comb White Leghorns won at Indianapolis, Ind., January 12-17, 1912, on twelve entries, 1, 2, 3, cock 1, 2, cockerel, 1, 2, 3, hen, 1, 2, 3, pullet, 1 pen. Get the E. W. Grove White Leghorn Book, The Best Work on the Breed, price 50 cents. Address E. W. Grove, Clayton, Missouri.

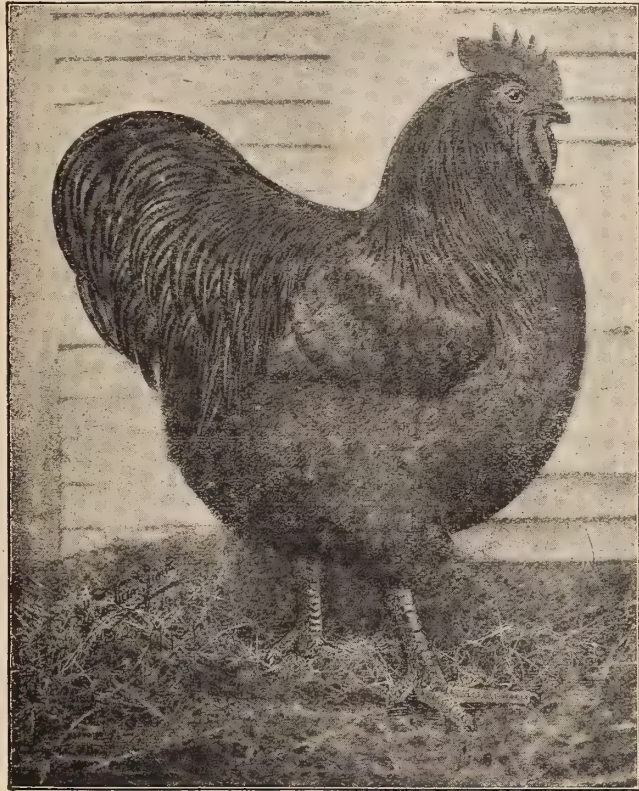

Bruce & Abbott, Whiteland, Ind., won on their Single Comb Buff Orpingtons at the Grand Music Hall Show in Cincinnati Jan. 23-29, 1913, to the tune of 1-2 cock, 3-5 hen, 1-2-4-5 cockerel, 1-2-3-4 pullet, 1-2 young pen, 1 old pen, \$40 cup for best display of Orpingtons (all varieties compet-

ing), \$25 silver cup for best display of Buffs. The Bruce & Abbott Buff Orpingtons are one of the very best strains, and this firm is a good one to do business with. Get one of their Golden Buff cockerels and a setting or more of their best eggs. You will never regret it.

Loyd & Son, of Greensburg, Ind., were at the Cleveland Show, Jan. 20-25, with their Partridge Plymouth Rocks and won special for best display, and 1-3-5 cock, hen 2-4-5, cockerel 2-5, pullet 2-5, first pen.

play. This is truly a great winning, but Sheffield Farm's (Glendale, Ohio) Premier Partridge Wyandottes have repeated this performance more than any other breeder of most any breed.

D. M. Covert's Barred Plymouth Rocks made a grand winning at the Cleveland Show Jan. 20-25, winning cock first, second; hen, fifth; cockerel, third (no pullets nor pens entered); cockerel bred hen, first; pullet bred cockerel, first; pullet bred pen, first; shape special male; second best dis-

Black Orpington cock that headed third pen at Grand Central Palace Show, Dec., 1912. Owned by F. B. Crawford, Rahway, N. J.

When it comes to beautiful color and fine penciling and grand Rock type the Loyd & Son's Partridge Plymouth Rocks are second to none. Get one of their cockerels and improve your strain.

The Premier Partridge Wyandottes won at Cincinnati Jan. 23-29, 1913: Cock, 1-2-3-4; hen, 1-2-3-4; cockerel, 1-2-3-4; pullet, 1-2-3-4; pen, 1-2-3; silver cup for best dis-

play; best local cockerel and pullet; also second cock in Single Comb Rhode Island Reds.

W. J. Brinkley, Iuka, Miss., breeder of White Plymouth Rocks, reports the following winnings at the late Jacksonville, Fla., show: First and 2d cock; 1st and 2d hen; 1st and 2d cockerel; 3d and 4th pullet; 3d pen; special for best cock in American

# McClave's Linwood Poultry Farm

The home of high class prize winning Barred Plymouth Rocks, White Wyandots, Buff Orpingtons, S. C. White Leghorns, Bronze Turkeys, Indian Runner and Pekin Ducks and Geese. The finest collection of these varieties in the U. S. One of the oldest Poultry Farms in Ohio. I have 1000 head for sale of the finest quality. Single birds, pairs, trios and pens at reasonable prices. Now is the time to buy your breeding stock as the breeding season is at hand.

Eggs for hatching from selected prize matings. Leading winners the past season at Detroit, Columbus, Cleveland, Hagerstown and other large shows. At Cleveland January, 1913, my birds won 73 first, 25 second, 14 third, 12 fourth, 6 fifth prizes, 12 cups and Sweepstakes for best Pens and Displays. More prizes than the next three largest exhibitors combined. Highest quality, reasonable prices, prompt service. Write your wants to

Chas. McClave :- Box A :- New London, Ohio

# Zimmerman's R. C. Reds

Won at Cleveland January 20 to 25, 1913, 2-3 pullet, in the largest class ever exhibited at Cleveland. A limited number of settings to spare. Book early.

## CHAMBERLAIN'S PERFECT CHICK FEED

The Only Original Dry Chick Feed and the World's Standard. "Lady Showyou," winner of the National Egg-laying Contest at Mountain Grove, Mo., with a record of 82 eggs in 82 days, and 281 eggs in a year, and recently sold for \$800, was raised on Chamberlain's Perfect Chick Feed. We have agents all over the U. S., but if our agent is not near you, we can make you special delivery prices on 100 lb. lots, or more.

W. F. Chamberlain Feed Co., 358 N. Commercial st., St. Louis, Mo.

HAS NO EQUAL—NO CORN—NO BOWEL TROUBLE

## Payne Bros.' Rose Comb Reds

Win at Madison Square Garden, the "Quality" Show of America—1st cock, shape and color special, 1st pullet, color special, 5th hen, 3d pen. At the big Boston show, 1912—1st cockerel, 1st pen, 2d hen and six other ribbons on nine entries. If you want the best in stock and eggs, write us. Mating list free Feb'y 1st. Satisfaction guaranteed.

PAYNE BROS. :- BOX J :- PORTLAND, CONNECTICUT

## SILVER AND GOLDEN CAMPINES AND S. C. WHITE LEGHORNS

Baby chicks of quality from these celebrated strains of heavy layers of large white eggs. I make no extravagant and unsubstantiated egg record claims; each year our chicks are bred from birds whose performance is measured by their egg yield, having thus earned a reputation in heavy egg production. At Cleveland, January, 1913, our Silver Campines have shown by their winnings (two firsts, one second, one fourth, one fifth, on an entry of six) that utility and show values can rest in the same birds. Now is the time to book your order for either baby chicks or eggs for early delivery. Our prices are right and we guarantee to please. Catalogue free.

S. D. Hall : Box 78 : Seville, Ohio

## S. C. BROWN LEGHORNS

ONLY THE BEST—PRIZE WINNERS

The kind of birds the fancier loves to raise. I won 1st on cockerel, 3d on cock, at the Boston show, 1907; 2d and 5th cockerel, 3d and 5th cock, 3d and 6th hen, Boston, 1908; 1st on cock, 3d on pullet, at Madison Square Garden Show, 1905; 1st on cock, 2d and 3d on cockerel, 1st on pullet, 1st on pen, and 10 special premiums at Chicago show, 1905, winning fifteen prizes on eight birds. At Chicago, December, 1909: 1st and 2d cock, 1st and 5th cockerel. First cock, 1st cockerel at the Great Chicago Show, 1910. Chicago, 1911, 1st cockerel, 2d cock. A choice lot of show and breeding stock. Circular showing my winnings free. Write now. Address

W. H. WIEBKE Box P 348 FORT WAYNE, IND.

## BRADY'S WHITE ORPINGTONS

Made show records last year for myself and my customers unapproached by any breeder in the United States. In the PHILADELPHIA SHOW I won FIRST PEN. The pen winning second was of my birds and in the hands of my customer, V. K. Dayhoff of York, Pa. I also won FIRST HEN and REFUSED \$1,000 for her. In the great NASHVILLE (TENN.) SHOW I sold my two best pullets for \$175. My first hen in this show was pronounced the best hen ever shown in the great South. My young pen was beaten only by a pen of old birds direct from England. My customers, also, won in this show, as well as DES MOINES, IOWA; LANSING, MICH.; WHEELING, W. VA.; LEBANON, PA.; BALTIMORE, MD.; CHICAGO ILL.; MADISON SQUARE GARDEN, NEW YORK, etc., etc. This year I have more size and high show quality than I have ever had and can furnish birds for your early shows that will add credit to their new owners. Write for prices, mention A. P. J. Birds shipped on approval.

Eggs, \$5, \$10 and \$15 per 15

J. S. Brady, Parkers Landing, Pa.

class. Seventy-five-dollar silver cup for best hen in show; gold legband for best female in American class; \$5.00 in gold for whitest bird in the show. The three specials won on female were won by his grand hen, "Loucille." These birds were the sensational winners of the entire show. For further particulars write him and mention American Poultry Journal.

A. A. Carver, Seville, Ohio, whose Queen Quality Rhode Island Reds won at Cleveland last year every first Mr. Carver went after, are winning all over the country in the hands of Mr. Carver's purchasers. He decided to rest on his laurels and let his customers do it—that is why he did not exhibit any this year. He has reports of winnings from New Jersey, North Carolina, Louisiana, Oregon, Massachusetts, Idaho, Iowa, Illinois, Michigan, Wisconsin, Alabama, Mississippi, West Virginia, Virginia, Ohio, Indiana, Washington, Montana, Minnesota, Pennsylvania, Tennessee, Kentucky, New York, Arkansas, and Georgia—twenty-five states in all. That certainly is going some. In looking over Mr. Carver's matings I find them to contain more quality than any in country. Queen Quality Reds are red and have sharp, glossy green black points. Mr. Carver is a great special materal—mating pairs and trios to obtain certain results. He will treat you right 365 days in the year.

Mr. Fred H. Poertner, Berea, Ohio, Single Comb Buff Orpingtons, won at Cleveland Jan. 20 to 25, first pen, fifth cock and fifth pullet, nine pens competing. This first pen is the same pen that won first pen at Cleveland last year. How is that for "buff all over—buff to the skin and buff all the time?" Mr. Poertner did not show any Buff Wyandottes.

Mr. Chas. Switzer, of South Euclid, Ohio, added more victories to his already long list at Pittsburg and Cleveland. The Roseland Single Comb Buff Orpingtons won at Pittsburg, first and second pullet, second cockerel, and third cock. At Cleveland Jan. 20 to 25, 1913, second cock, third cockerel, third and fourth hen, fourth pullet, third and fourth pen, and second best display. The Roseland Buff Orpingtons are always heavy winners in any show room.

Mr. W. Etzensperger, Willoughby, Ohio, did it again at Pittsburg with his Rose and Single Comb Reds, winning on Single Combs second, fifth and sixth cockerel, second pullet and fourth pen. Rose Combs, second, third and fourth cockerel, second and sixth pullet, fourth pen; and color special on both Rose and Single Comb. Mr. Etzensperger is mating up some good pens and will furnish settings at \$5, \$10 and \$15 per fifteen.

The Single Comb Black Orpingtons owned and bred by J. T. Adair, Millersburg, Ky., are establishing a record that is making lovers and breeders of this grand breed set up and take notice. At Indianapolis, Jan. 12-18, 1913, they won 1st, 3d, cock; 1st, 2d, cockerel; 3d, 4th, 5th, hen; 1st, 2d, 4th, pullet; 2d, 3d, pen; three Black Orpington Club cups, four gold medals and a \$25 display cup. This great victory, added to that of Louisville, is very classy.

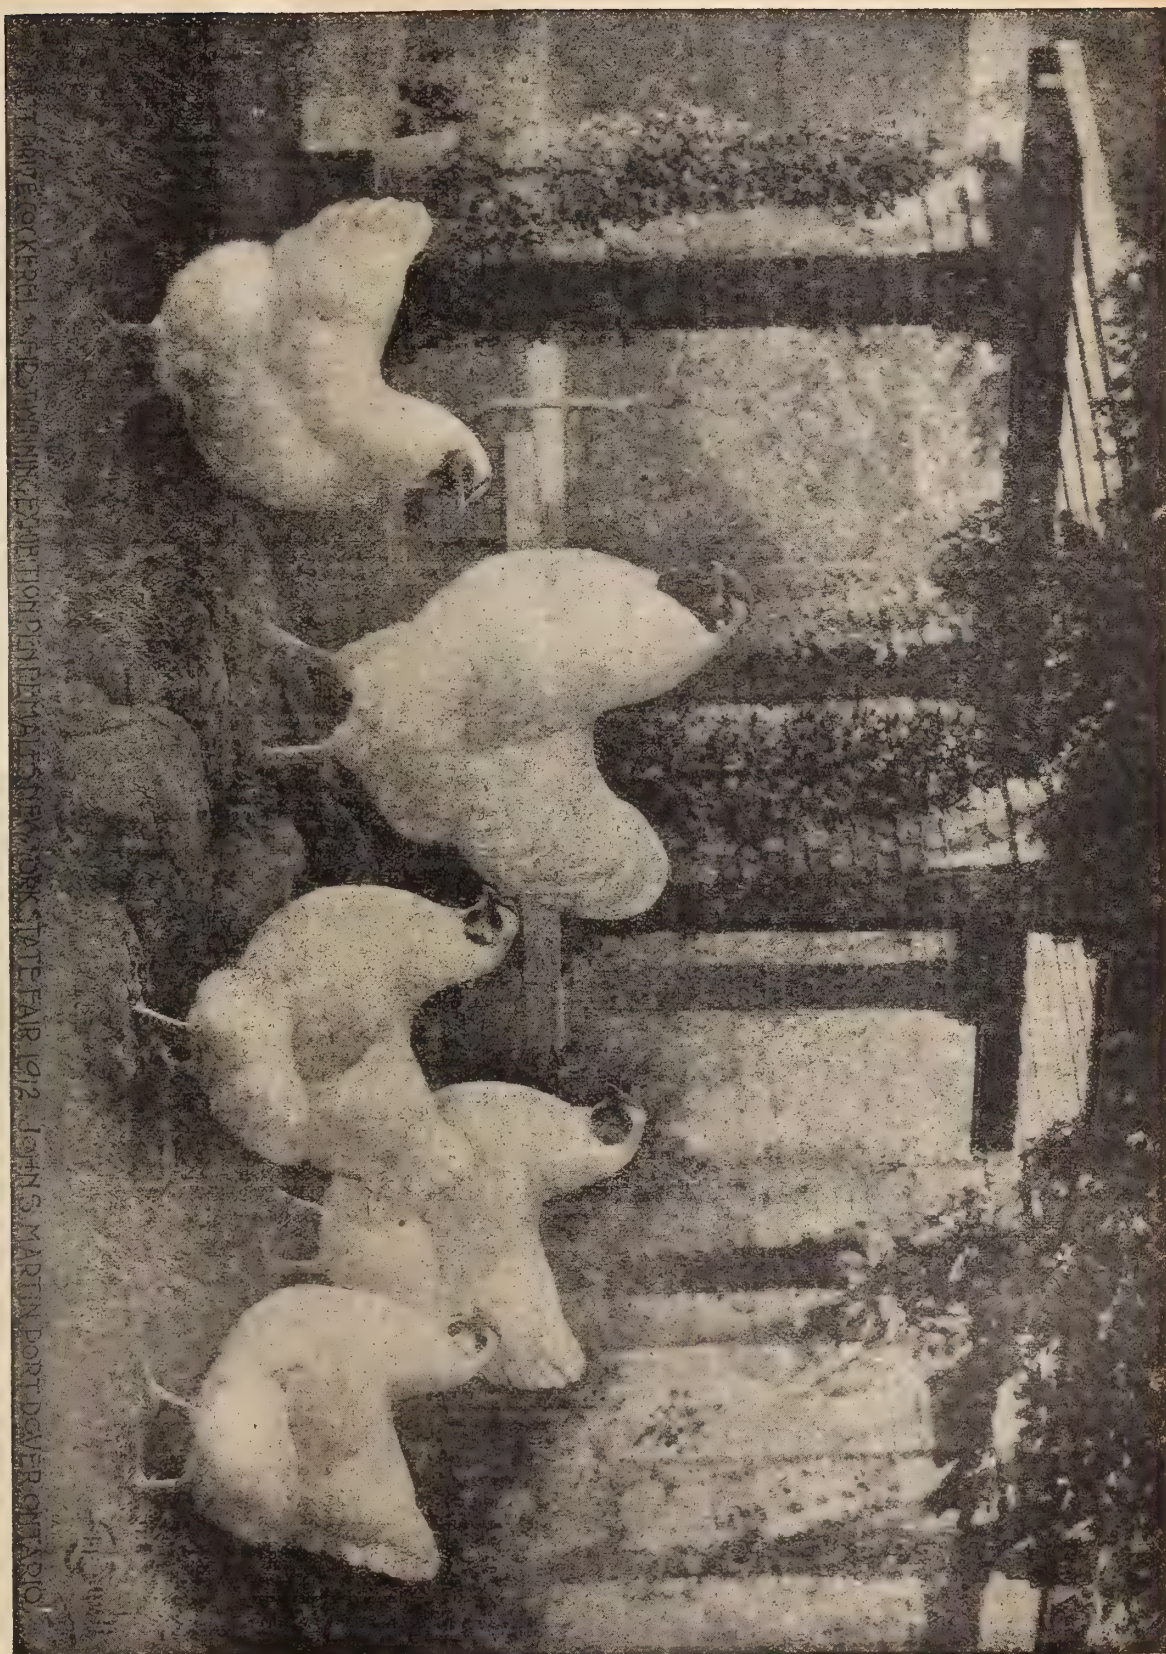

W. A. Besuden, proprietor of the Wahebe Bantam Lands, Cincinnati, had a display of White, Black, Buff and Part-ridge Cochins Bantams, and dozens of silver cups at the Cincinnati show that was one of the attractions—always a crowd around them.

The Twentieth Century Hatchery, Chatfield, Ohio, furnishes baby chicks from ten leading varieties. The ventilation system is so perfect and the conditions of everything so sanitary that the Twentieth Century chick are as strong and husky as young bears. They are shipped from coast to coast and live to grace and win many show rooms where they are entered.

C. L. Patterson, of Barberton, Ohio, Columbian Wyandottes, won the following prizes in very strong competition at Cleveland Jan. 20-25; second pullet, second cockerel, second pen, third cock and third hen. Mr. Patterson's Columbian Wyandottes are especially strong in pure white with sharp, black points, and are grand in type and size.

M. C. DeLoof, Willoughby, Ohio, won with his Rose Comb Rhode Island Reds at Youngstown, first and fifth cock, second and third cockerel, fifth pullet and shape special on males, second pen. And at the State meet at Cleveland, Jan. 20 to 25, 1913, on three entries—won second cockerel and first pen, proving them second to none.

WHITE COCKEREL. F. J. WYANDOTTES. YORK STATE FAIR 1912. JOHN S. MARTIN, PORT DAVENPORT, IOWA

Perhaps no other autumn exhibition in America attracts a finer lot of the season's production of standard-bred fowls than the great New York State Fair at Syracuse, held this year September 9-14. It gathers many of the best birds of the east as well as many from Canada. Breeding to win at this early exhibition requires quick growing strains of exceptionally strong vitality combined with utmost vigor. This, John S. Martin, Port Dover, Can., breeder of "Regal" White Wyandottes, has kept in mind. He has bred for these qualities first and then for Standard shape. Through the regular use of reliable trap nests his best layers and their type are recorded and tested. In this way Mr. Martin serves the practical interests of the poultry industry. He enjoys it and it pays him well. It is only a little way over the border to leading American shows, where he has exhibited many wonderful specimens of his White Wyandottes. The females of his first prize exhibition pen at New York State Fair, grouped with his first cockerel, illustrate the product of his skilful breeding. At the time of our autumn visit the flocks of Mr. Martin's place totaled about 2,500 birds. This included many flocks of early grown young birds that by the first of November were matured into show form.

## DE VOSS' COLUMBIAN PLYM. ROCKS

Winners Tri-State Fair, Memphis, Tenn., and at great Boston Show. Exhibition and breeding birds for sale. Have a number of good utility pullets at \$2 each. : Lee W. DeVoss, Box 1293, Greenfield, Ohio

## COLUMBIAN WYANDOTTES

Select exhibition stock. Ready for early shows. My customers are sure to win from our selection. Many have been pleased. To make room I will sell one extra good pen of 8-yearling females and male at \$20. Write for literature in full description of the breed.

## SHOEMAKER'S POULTRY BOOK AND ALMANAC-CATALOG FOR 1913.

The illustration presented, herewith, gives a faint idea of the beautiful title page of this book since it is impossible for us to reproduce the rich colors of the page. For more than a quarter of a century this book has been presented to the poultry public annually. The book for 1913 consists of 224 pages and cover embellished with many colored plates of fowls and appliances and as usual contains a great amount of valuable information for the fancier as well as the farmer. It also contains illustrations and descriptions of the many varieties of fine fowls on the great Shoemaker Poultry

Farm, descriptive illustrations of houses, yards and other equipment on the farm. The information found in this book includes valuable plans and illustrations of poultry houses, care of poultry in its various branches to insure greatest success and profit, detailed prices on pure bred fowls, eggs for hatching, incubators and poultry supplies of all kinds. It should be in the hands of every A. P. J. reader and will be mailed postpaid for 15 cents if you address C. C. Shoemaker, Box 605, Freeport, Ill.

Niemann Bros. Mfg. Co., Mt. Olive, Ill., are manufacturers of Poultry Buildings and Fixtures of the highest quality. Why waste your time, money and patience in trying to operate your poultry plant successfully with home-made brood coops, trap-nests, etc., when you can get up-to-date fixtures of this kind from the above mentioned firm at a price anyone can afford to pay. All goods put out by them are made of the very best material, and with proper care, will last a lifetime. This firm has been advertising in our columns for several years and during that time have given perfect satisfaction to every one of their customers. You can therefore depend on getting just what you pay for. They have a large catalogue which fully describes all articles manufactured by them. Send for one to-day. It will be sent free if you mention American Poultry Journal.

## Don't Feed Green Food

**U. R. FISHEL :: BOX A :: HOPE, INDIANA**

A mild, open winter with hens daily exercising out of doors.

The early reports on fertility are very good.

With the great Pittsburgh show on this week the season of 1912-13 closes. More and larger shows were the rule, insuring the most successful year.

Better birds and more of them were the conspicuous features. A close second were the new exhibitors seen and the records they made.

We hope our readers appreciate our show reports. We aim to give credit where due. Worthy specimens seen receive comment whether shown by advertisers or not.

There is nothing small about the Dollar Journal; not even its size or circulation. Compare both.

The Pittsburgh Fanciers' Club's fifteenth annual show is on this week, larger than ever, with close to a thousand entries returned. This is the quality show of this section and no mistake.

Mr. E. B. Thompson makes a strong

candidate for president of the A. P. A. The members as we know them have desired a breeder for this office for some time. They now have the opportunity to vote for and elect a breeder who is well known to all.

From a Journal man's point of view, I believe the Journal men have had about all that is due them for some time to come.

We ask absolutely nothing for ourselves, or for any Journal friend. Strange, isn't it?

Secretary S. T. Campbell has made an ideal official, always prompt and always capable. We believe he deserves re-election.

Mr. Chas. D. Cleveland writes that he is not a candidate for president, but would accept election to the executive board of the A. P. A. We are pleased to heartily recommend him for this office.

Vierheller Bros., Pittsburgh, Pa., Buff Rocks made a beauty record at the club show held at Springfield, Ill., when they won, in one of the largest classes ever brought together, first pen old,

third pen young, third cock, second cockerel, first pullet, club championship cup for best cock, cockerel, hen and pullet, cup for best display, cup for best pen, etc.

At the Pittsburgh Exposition show they won all five firsts. This line has been an important factor for some years.

We lately spent part of a day with Mr. F. E. Hering, South Bend, Ind. Mr. Hering has several strong matings of S. C. White Leghorns. In males he is exceptionally strong in type, sound color and size.

We note that there is a doctor who claims housework will cure almost any of woman's numerous ailments." Sort of a "dishpanacea," so to speak.

The Woodview Farm, Mr. Jno. Pringle, Prop., London, Ont., has a strong line of Barred Rocks, White Wyandottes and S. C. Reds that have been winning for birds. Birds of vigor and quality feature this line.

The breeders of Canada present for member of the executive board Mr. Richard Oke, best known as Dick Oke. Dick has thousands of friends in the U. S. A. who wish him well and will vote for him. Canada should be represented and Dick is the man.

The breeders' busy season is here. With matings made the hatching season follows. The call for hatching eggs promises to be larger than for three years past. Prospects for strong fer-

## Write Your Name on a Post Card Today for this Big 120-Page POULTRY BOOK **FREE**

### GREATEST POULTRY CATALOG EVER PUBLISHED

You will be surprised at the amount of valuable information this big 120 page catalog contains—and the good part of it is, it is just the kind of information you want. For example the very first article is "Poultry Possibilities on the Farm"—tells how you can raise poultry and make five times the profit you can in pork or beef.

#### Partial List of its Contents:

Which Breeds are Best.  
How to Select Breeders, Layers, Etc.  
How to Feed Layers.  
How to Fatten and Feed Chicks  
How to Grow Ducks.  
Poultry Buildings.

Winter Laying Houses.  
Incubating the Eggs.  
Lamp or Fireless Brooders.  
Diseases—How to Prevent and Cure.  
What Systems are Best and Many  
Other Important Topics.

In the 30 years we have been building incubators and brooders we have never published such a helpful, instructive and valuable book. It also tells how the big, leading poultrymen conduct their poultry farms—gives their experiences—the kind of equipment they use. No catalog published approaches this new book. Describes the

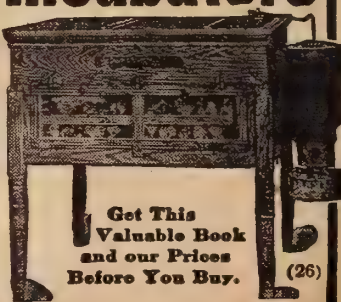

## 1913 Prairie State Incubators BROODERS, HOVERS, COLONY HOUSES

which have maintained the lead 30 years as the most successful, efficient and economical machines made. The Sand Tray Prairie State Incubator is a decided improvement over others. No other machines are fitted with this Special Device which accounts for its big hatches of strong, vigorous "chicks that live." Catalog fully explains this. The Prairie State Universal Hover is another exclusive improvement for rearing chicks. It reduces the death loss by furnishing ideal brooding conditions. With this device and a piano or dry goods box you can build your own brooders. You ought to

### Send for this Valuable FREE Book at Once

PRAIRIE STATE INCUBATOR CO. 468 Main Street, Homer City, Pa.

tility and a great demand for eggs are most encouraging.

Eggs for hatching are the solution of obtaining the best of stock by the breeder of moderate means.

It is an error to think that all you have to do to get good stock is to buy the best eggs and hatch them. Care and proper feed are just as important. The best of eggs will not mature their standard of quality unless the best of attention is given the growing chicks. Feed often and well, with proper variety; house well, and keep them clean. It is the attention to the little things that insures success.

Mrs. Hoyle—"Are they in our set?"  
Mrs. Doyle—"No; they are not even in our parcel post zone."

What we saw at the Ringlet home is given in another column. Mr. Thompson has quality and quantity this season par excellence.

In hatching eggs, either under hens or in an incubator, it is always advisable to use liberal moisture. In hatching with hens sprinkle the eggs from three to five times with lukewarm water, the last wetting on the eighteenth or nineteenth day.

If your incubator is not fitted with a sand-moisture tray, place a shallow pan with water under the egg trays or wet down the eggs as told above.

The Pittsburgh Fanciers' show is larger and better than ever, with superb quality. Full show report in our next issue. This is a true fanciers' show, managed by the best sort of fellows and royal fanciers.

Mrs. Jos. P. Hildoefer gave a dinner to the judges and breeders, at which the following spoke, with Mr. Geo. Ewald as toastmaster: F. L. Ober, Wash Moore, Jern Poley, Frank Bran, Lou Vierheller and several others of note. A most pleasant affair.

Mr. J. S. Brady, Parkers Landing, Pa., made a notable winning on his White Orpingtons, winning four first prizes and special for best pen in the show. Mr. Brady has made a great record here before but never as good as this. This is the only show he has

made this year. He surely has the goods.

The Shenley Heights P. Y., Pittsburgh, again made their usual record by duplicating their win at Cleveland. Here again they won all five firsts in S. C. Reds and special for best cockerel at the show. Also color and shape specials.

Hamburg Bill is now representing the Fancier. Well, well, we can now have the pros and cons to all questions debated in the one paper.

"Bill" stands well with the breeders. His years of work are known and we wish him success in his new field.

"Pundy" made good at Pittsburgh

## BARRED PLYMOUTH ROCKS

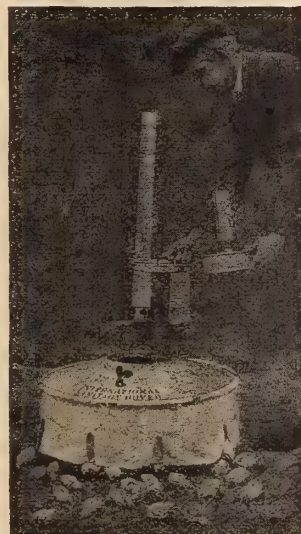

Bred for business and show-room requirements. If you are interested in a heavy laying strain with exhibition quality write me for show record and prices on such as you need. Get my 1912 mating sheet if you need eggs for hatching.

O. L. KING, : ROCKFORD, ILLINOIS

### Only Live Chicks Count

It is not the number of chicks hatched, but the number raised, that makes a poultry farm profitable. Chicks trampled to death or smothered in the brooding represent loss.

## International SANITARY HOVER

The only hover that is warmer near the curtain than at the center. This, by causing the chicks to distribute themselves near the edge of the curtain, prevents crowding and assures plenty of fresh air.

The Sanitary Hover can be picked up and carried around with ease and used anywhere. No carpenter work is required to set it up. It is fireproof, unbreakable, absolutely reliable.

More sales are being made of Sanitary Hovers than of any other two makes combined. Sixty per cent. of the Sanitary Hovers sold are replacing other brooding devices. If you are going to raise chicks this spring, you owe to them to investigate the results achieved with the Sanitary Hover.

Indorsed by Kellerstrass, Owen Farms, Wm. Cook & Sons, and America's leading poultrymen generally. The concerns named are breeders of the highest priced birds in the country. Every chick entrusted to a hover by them represents from \$10 to \$100 in value. They use the Sanitary Hover because they know it can be depended on.

Write for booklet containing a full description of the one perfect brooding device—the Sanitary Hover.

INTERNATIONAL POULTRY SALES CO.,  
Box 511, Brown's Mills, N. J.

## Sensation at Chicago Show

### MARTZ'S CHAMPIONSHIP BUFF ORPINGTON COCKEREL

We could not compete, but this living model of the Fashion Plate Book is the best Orpington ever caged in Chicago.

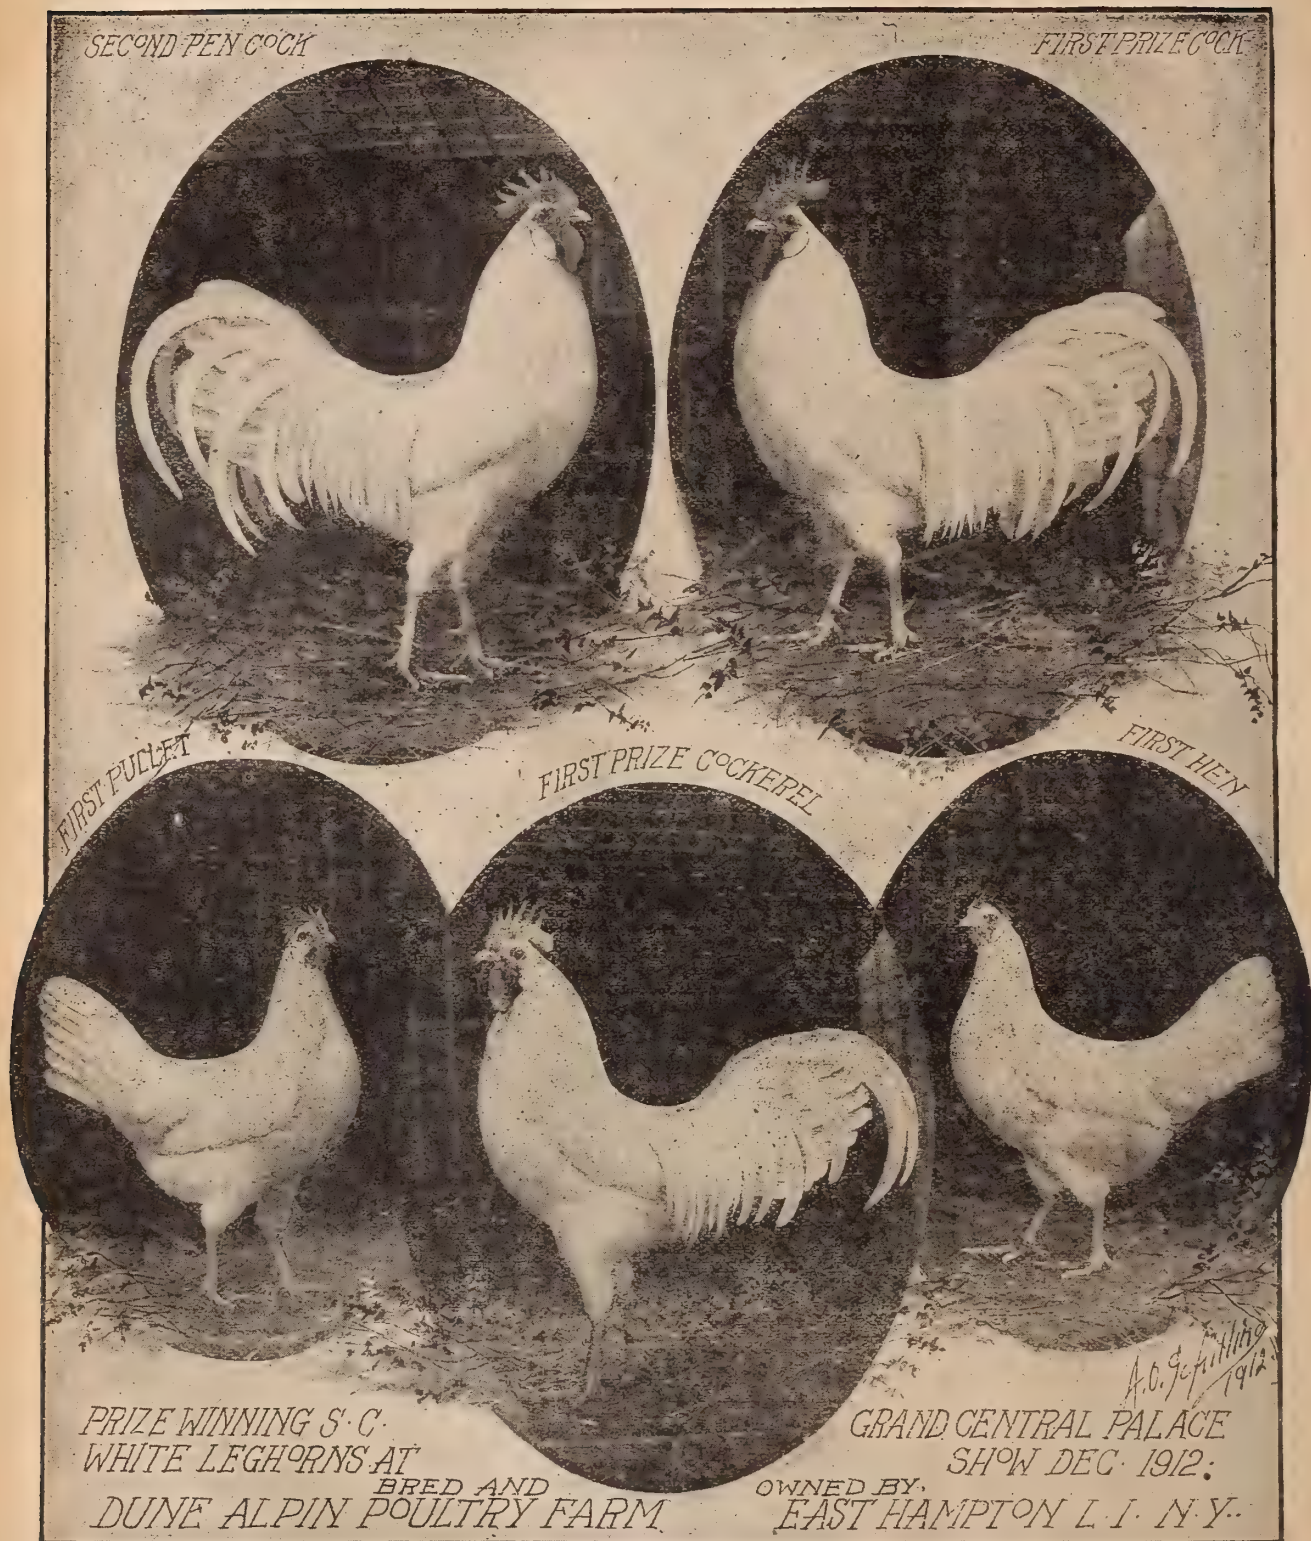

400 cockerels and 600 females finished and ready for sale. Such an assortment of "top notch" breeders cannot be found outside my own yards.

EGGS FOR HATCHING—Twenty-five matings of wondrous color, correct type, with the laying habit bred in.

The big Orpington Fashion Plate Book describes all matings, my wins at Chicago, Indianapolis, Louisville, Memphis, Nashville and the price of eggs—free.

A. E. Martz Buff Orpington Specialist..... Box A, Arcadia, Indiana

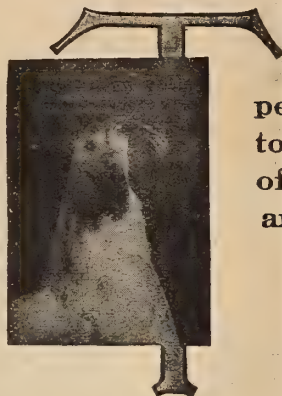

One of the most interesting sections of a Poultry Show to one who admires grace and beauty in fancy Poultry is to our mind the White Leghorn alley at such shows as New York and Boston especially. Here we find the cream of the country assembled in competition, and this past season brought out some specially fine ones. Dune Alpin Farm's wonderful display at Grand Central Palace and Boston Shows, to our mind, stands out as a great achievement in the production of high-class winning White Leghorns. We were afforded the opportunity to make studies of most of their winners, and in doing so we are able to appreciate the wonderful form, grace, and plumage in which they were shown at these two large shows. It is here, when we bring them out of their cages before the camera, we are able to size them up in making studies of them for illustrations, better than in any other way we know of. Many of them were fit for standard models and are equal to the best ever produced by any breeder.—A. O. SCHILLING.

# The Leghorns Standard and Non-Standard Varieties

The Most Complete Text Book on the Popular Leghorn Fowl Ever Issued

HIS new edition consists of 144 large pages and cover, and tells how to select and mate birds for the breeding pen; how to judge Leghorns in the show room, and how to feed for very heavy egg yield and fast growth. Some of the great commercial Leghorn egg farms described and illustrated.

## FULLY ILLUSTRATED

Three Color Plates by Franklane L. Sewell and A. O. Schilling

Text and Illustrations are Brought Down to Date to Conform to the 1912-1915 American Standard of Perfection.

Contributors to this book include the Foremost Poultrymen and Leading Authorities in America and Europe. It is one of the most comprehensive in text and most profusely illustrated publications of its kind ever printed. The illustrations are works of art by America's greatest poultry artists.

### THIS NEW BOOK CONTAINS THE FOLLOWING VALUABLE ARTICLES

**CHAPTER I. THE LEGHORN FOWL:** History of the Origin and Development of the Leghorn Breed; The Brown Leghorns; The First White Leghorns; Origin of Buff Leghorns; First Black Leghorns; Silver Duckwing Leghorns; First Exhibited in England; Origin of Rose Comb Brown, White and Buff Leghorns; Origin of Pyle, Dominique, Birchen, Blue, Golden Duckwing, and Rose Comb Black Leghorns.

**CHAPTER II. LEGHORN TYPE:** Evolution of Leghorn Type. Standard Shape of Leghorns.

**CHAPTER III. BROWN LEGHORNS:** Single Comb Brown Leghorns; Color Breeding in Brown Leghorns; Thirty Years Among Brown Leghorns; Brown Leghorns Past and Present; Rose Comb Brown Leghorns; Symposium by Fifteen Foremost Breeders on Progress Made in Color and Shape; Virtue and Faults of the Variety Today; How the Revised Standard will Benefit Brown Leghorns in the Future.

**CHAPTER IV. WHITE LEGHORNS:** Improvement in Shape; Line Breeding for Improvement in Type and Comb and Systematic Feeding in Obtaining Pure White Plumage; Breeding to Standard Requirements; Rose Comb White Leghorns; Breeding Rose Comb White Leghorns; White Leghorn Symposium on Changes in Exhibition Type, the Laying Type; Flock and Individual Egg Record; White Leghorns for Market; White Leghorn Bodies, Tails and Legs; Heads, Combs, Wattles and Earlobes.

**CHAPTER V. BUFF LEGHORNS:** Buff Leghorns of the Past; Mating for Shape and Color; Modern Buff Leghorns; Buff Color Breeding Problem; Buff Leghorns for Show and Table.

## THE BLACK LANGSHAN AS A UTILITY FOWL.

By John A. Rhodes.

**U**TILITY poultry culture does not mean, as a good many people suppose, the keeping of common Mongrel or Dunghill fowls, on the contrary it means strictly pure bred stock, mated for meaty carcasses, good egg records and large and better shaped eggs.

A variety of fowls to become popular with the people must have something especial to commend it. It must be a good layer, or a fine table fowl, and

if it unites these two advantages with hardiness, docility and beauty, it must become a favorite.

Those who have bred the Black Langshan know that they have all these characters in a pre-eminent degree. That there is no better table fowl than the Langshan is well known to all who have any knowledge of the matter. They lay in winter when the price of eggs are high, they are hardy as the hardiest, gentle, easily kept in yards, a five foot fence will hold them. They stand confinement well, are lively and vigorous.

The Langshan is not a lazy stupid fowl. It is sprightly and active and a

good forager. The docility of the Langshan to me counts for much.

In comparing with other breeds, it is not only as large, handsome, hardy fowls and good layers, but as table fowls with delicately white and tender skins, breasts well covered with choice meat, legs and thighs in proportion when dressed, such as to delight equally the farmer's wife who is proud of her poultry, and the housekeeper upon whose table it is destined to appear, that the Langshan will hold a place; a place which, as a test of quality, no other breed will ever approach.

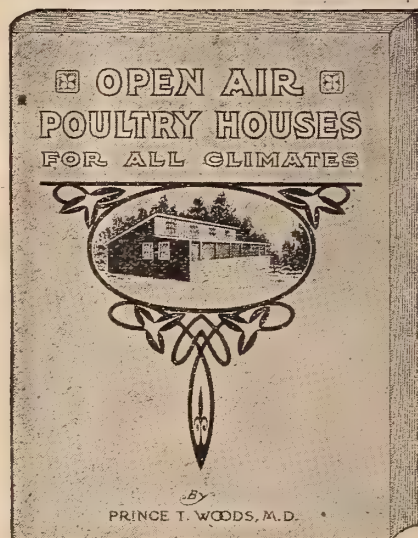

Mr. Cook in speaking of the Langshan in connection with the other breeds

# OPEN-AIR POULTRY HOUSES FOR ALL CLIMATES

*By Dr. Prince T. Woods*

America's Leading Authority on Practical Poultry Keeping

**The best house book ever published. Now ready for delivery. Be sure to read it before you build or make alterations in your poultry houses. Just out. 88 pages, 46 illustrations and 5½x8 inches in size.**

A WELL WRITTEN, WELL PRINTED, WELL BOUND (in cloth)—a REAL BOOK, not a pamphlet or catalog. Just what you are looking for if you want to be successful with poultry. All NEW. Special illustrations from pen drawings and from actual photographs of construction work. Plainly worded. Easily understood. Tells plainly how to build and what to build so that anyone at all used to handling tools can build a good practical open-front poultry house.

### The Three Best "Fresh-Air" Poultry Houses

Tells how to build the kind of houses that the most successful breeders all over the country are building and recommending. Government workers favor these open-air houses. The "Fresh-air House" has come to stay and you will want to build one. It means Better Fowls, Freedom from Disease in the Flocks, Better Egg Yield, Better Fertility, Better Chicks.

### No Matter Where You Live, If You Keep Poultry You Need This Book

There are nine chapters and every one of them full of live interest and helpful information. Just look over the table of contents:

Chapter I—Sunlight and Fresh Air. Importance of pure open air both day and night for all domestic poultry. Relation of sunlight and fresh air to health and vitality. Nature's best aid in the prevention of disease.

Chapter II—Why Use Open-Front Houses. A few more reasons why you should use open-front open-air houses for the comfort and well being of your fowls as well as the betterment of your profits.

Chapter III—Hints and Helps on Building. Tools and amount of experience required. Materials. Suggestions for saving cost, floors, frame, eaves; shingles or roofing. Portable or permanent buildings. Foundations.

Chapter IV—Location of Poultry Houses. Land. How to face the building. Relation to surrounding country. Prevailing winds and wind breaks. Continuous or colony buildings. Yards.

Chapter V—Dr. P. T. Woods' Improved Open-Air Poultry House. New descriptive photographic illustrations showing how to build and actual construction of house built to illustrate this

book and now being successfully used to winter 100 valuable White Plymouth Rock breeders. Dimensions of buildings. Suggestions for building on colony or continuous plan. Building instructions and list of material required for house to be boarded in, up and down.

Chapter VI—Another Plan for Dr. Woods' House. Line drawings showing plans and detail of frame. House to be boarded horizontally. How to build. List of material required. Complete building PLANS.

Chapter VII—The Gillette Open-Air House. The house used in the International Laying Competition. Description, plans and list of material required.

Chapter VIII—H. H. Stoddard's Open-Air Cage Roost. A protected outdoor roost for fowls in warm or hot, dry climates where no houses are needed. Diagrams showing two types of cage roosts. Night quarters which help solve the stickfast flea problem and afford greater comfort for fowls in tropical and semi-tropical climates. Rain tight roof may be provided where frequent heavy rains prevail.

Chapter IX—The Tolman House. Brief description and some views of this pioneer among modern "fresh-air" houses.

### Does This Mean Anything to You? Greater Comfort for Your Fowls, Better Fowls, Better Returns, Bigger Profits

If it does appeal to you, then you want this book on Open-Air Houses. If it does not appeal to you, better read it and find out what others are winning success with. Fresh-air methods have helped others to become successful and make bigger profits. WHY NOT YOU?

Price of "Open-Air Poultry Houses for All Climates," 75c Postpaid. With American Poultry Journal, One Year, \$1.40. Remember Cloth Bound, 9 Chapters, Profusely Illustrated, on High Grade Paper, Only 75c. Canadian Subscription and Book, \$1.65; Foreign, \$1.90

**American Poultry Journal Pub. Co., 542 So. Dearborn St., Chicago, Illinois**

used in the composition of his Orpingtons, he says:

"The Langshan, another good breed, are splendid layers and nice on the table, with good quality flesh, but their eggs are small. Let not those who keep these breeds think I wish in any way to speak against them. Far from it; I merely wish to point out where they can be improved."

Now it has not yet been "proved" that the Orpington is a better bird than the Langshan. Of course there are Langshans and Langshans, and I am speaking of well selected birds from pure bred stock. Langshan eggs will

First pullet Decatur, Ill., Jan., 1913, and special for best color. Owned by I. A. Engle, Latham, Ill.

weigh from 26 to 32 ounces per dozen.

While I do not raise Langshans for the market, but strictly for the fancy, yet I market a few every fall after carefully culling the flock, and they always bring the very highest price that is paid for market poultry at that season.

There is no better table fowl than a Langshan, especially when it is matured. As Capons, they are unexcelled.

The flesh is white, very fine grained, tender and juicy. The skin is a clear white, not a dark bluish white, but creamy white.

The skin of some other breeds is yellow, coarse and jaundiced looking when dressed for the table.

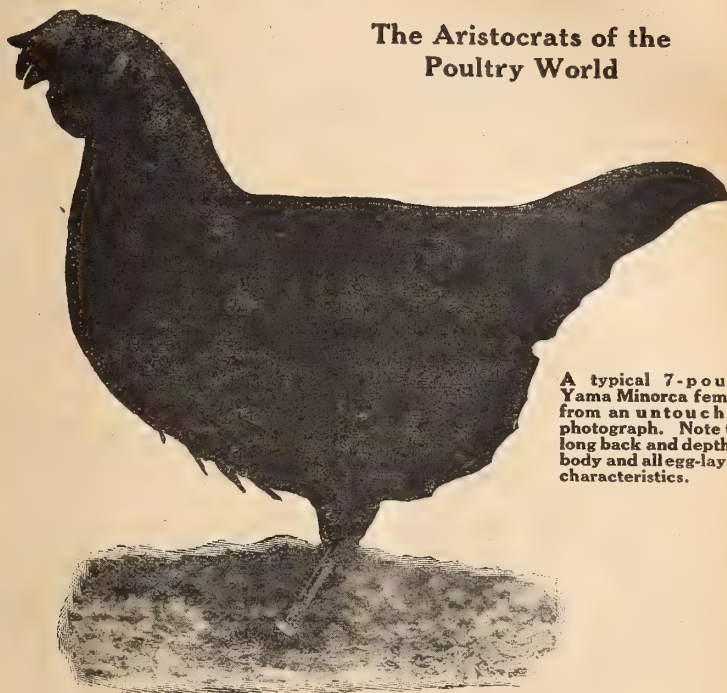

The skin of the Langshan is deli-

Second pen cockerel Springfield, Ill., Jan., 1913. Owned by I. A. Engle, Latham, Ill.

cately white and fine, and very tender. The skin of some other breeds in fact, like the skin of the Negro, indicates a tropical or sub-tropical region as its home; while the skin of the Langshan, like the Saxon, affords evidence of a temperate or cold climate as being its natural habitation.

The chief objection offered against a Black Langshan is, they are black. It is said they are hard to pick and show pin feathers, but I am sure no one that

The Aristocrats of the Poultry World

A typical 7-pound Yama Minorca female from an untouched photograph. Note the long back and depth of body and all egg-laying characteristics.

## Yama Single Comb Black Minorcas

**WE** believe there have never been put together twelve better pens of Minorcas. Every one is headed by prize-winning males—and one of the best judges of Minorcas wrote us on February 17: "I would like to show six of your Minorca cocks against any six in the country."

**Of the 51 cockerels and pullets we have exhibited this Winter at four shows, 42 were placed and EVERY ONE WAS BRED AT YAMA FARMS.**

Eggs for hatching from these pens, \$10 a setting.

Utility Minorca eggs for setting, from brothers and sisters of these selected pens, \$3 a setting, \$15 a hundred.

At Madison Square Garden, N. Y., December 30 to January 4, 1913, Yama Farms won on S. C. Black Minorcas, first, third and fifth cocks; first, fourth and fifth cockerels; first, fourth and fifth pullets; third hen; first and fourth pens; four firsts out of a possible five.

At the last Madison Square Garden Show, we had more Barred Plymouth Rocks placed than any other breeder. There is no better pullet-mating line than we have to-day and our cockerel matings are headed by such great birds as Cock Robin, the first cockerel and championship male at Buffalo, January 1913.

See from our catalogue and show records the kind of Barred Rocks we are breeding. We know the full pedigree of every bird in our pens and have given much care and attention to these matings.

Eggs for hatching from pens Nos. 16 to 22, \$10 a setting, as they run. Eggs, \$1 each if all from one pen.

Utility Barred Rock eggs, \$3 a setting, \$15 a hundred.

Send for our catalogue illustrated from untouched photographs, also our 1913 mating list.

## "SUNRISE" SELF-OPENING POULTRY DOOR

**EQUIP YOUR POULTRY and COLONY HOUSES** with our **AUTOMATIC Self-Opening Doors**. Protects your fowls against night marauders. Automatically opens at daybreak and gives your poultry the benefit of the supply of worms, bugs, etc., which nature supplies them so abundantly only in the early hours of the day. It means dollars and cents to you in **Healthier and Heavier Stock, More Eggs, Higher Percentage of Fertility and Stronger and Hardier Chicks**. Attached over the old opening in a few minutes. Never fails. Very simple. No clock-work or other complicated mechanism to get out of order. Made entirely of metal. Vermin, storm and weather-proof. Two sizes, **REGULAR \$1.90, CHICK SIZE \$1.75**, from your dealer or direct from us upon receipt of price. **MONEY BACK IF NOT SATISFIED**. Just give it a trial; after that, you'll not do without for 10 times the price. Agents Wanted everywhere. Sell at sight. Send all orders and inquiries direct to **Automatic Poultry Door Co., Dept. 2, 6337 Wayne Ave., Chicago**

## 10,000 Roup Remedy Samples FREE

We want to send to every reader of this paper a **Free Sample of B-K (Bacili-Kil)** the new non-poisonous, powerful, scientific compound which leading poultrymen say "knocks roup and kindred diseases quick." We want to prove it to you **before you buy**, therefore send for **Free Sample** today.

**10 times as powerful as carbolic acid, but Non-Poisonous**

**B-K Bacili-Kil**

**Odorless, Colorless, Germ Destroyer and Disinfectant**

For Cholera, Roup, Gapes, White Diarrhoea, etc. Will not cause fowls to drink less nor hens to slack up laying. Solves the poultry disease problem. Cost is trifling. One drop of B-K in 5 tablespoonfuls of water kills the roup germ.

Read this: "Received the 2 gal. B-K and like it very much. Our hens and chicks were dying with Roup and Cholera. We put B-K in the drinking water and sprayed the coops and houses and it did the trick all right. Our hens were coughing and we gave them B-K and they were soon well and healthy."—**HENRY A. TAYLOR, Elkhor, Wis.**

Send for sample—prove it on your own fowls and farm animals. You'll be amazed at the results. Don't wait. Now is the time to test it—not after you have suffered heavy loss.

**GENERAL PURIFICATION CO., 625 Pioneer Bldg., Madison, Wis.**

has ever dressed a pure bred Langshan will raise such objections. The Langshans are a rather loose feathered fowl, unlike the short and close feathered Black Leghorn, Minorca, or the Black Spanish, and they are for this reason more easily picked and show but few pin feathers.

As egg producers the Langshan unquestionably take front rank.

They will lay as many eggs the whole year round as any other breed, and in winter when eggs are scarcest and command the highest price they will lay proportionately more. This proposition has never been successfully contradicted.

Mr. Hausman, in an article on "Fowls in Winter" says:

"Whenever I find an old hen beating all the pullets, or even able to keep pace with them in laying, I cannot destroy so faithful an old servant. I have now a Langshan hen laying freely in her sixth year of laying, and but for a few days at a time she has scarcely ever stopped except to hatch a brood every year since she began. Last fall she did not perform her moult at once, but began to get a few new feathers in October, and has gone on gradually exchanging her old for new feathers which are not yet at full growth. When she means to take a holiday I don't know, but suppose she will take it out in hatching by and by."

Our hens commence almost invariably to lay while still cooped with their chickens. It is a common thing to see them grouped around their mother waiting for the event. Very many of the hens will continue to foster their chickens for a long time, giving them this divided attention.

In summing up the lessons learned in the first year of the Missouri egg laying contest, Mr. T. E. Quisenberry says we have learned:

"That there is no breed or variety which far excels other varieties or breeds which are in general use as far as egg production is concerned.

"That you should select the variety which suits you best as to color, size and shape, and breed them up until they satisfy you as to quality and productiveness.

"That the egg yield from Mediterranean is affected by extreme cold more than the other classes of fowls, because of the fact that they are closely feathered, larger combs and smaller bodies."

Any who look solely to utility farming to keep up the profits would do well to consider the addition of some good Langshans to their yards.

The quality which I have enumerated are the ones that combined make a good all purpose chicken, and it may be claimed with assurance that the Langshan is of this sort. I believe there is no fowl among the many breeds that is more profitable to raise. One trial of this excellent breed will quickly convince any one of the correctness of these statements.

G. F. Stewart, Coshocton, Ohio, the exclusive breeder of Silver Laced Wyandottes, won at Cleveland Jan. 20 to 25, first and second hen, second pullet and first pen, on four entries. His Laced Wyandottes are simply wonderful in lacing, and fine marked wings.

C. A. Besuden, Cincinnati, now at Cincinnati show with his Puritan Partridge Plymouth Rocks: Cockerel, 1-2; hen, 1-2-3-4; cockerel, 1-3; pullet, 1-2-4; pen, 1-4; silver cup given by Partridge Plymouth Rock Club for best second cockerel; cup for champion cock.

No. 16, 5-foot, two-perch Potter outfit. Price \$5. Made in 12 sizes.

## NOTICE TO SPANISH BREEDERS.

The American White Face Black Spanish Club is preparing for the press their first annual catalog.

It is our aim to make this catalog a hummer. No breeder of Spanish can afford to miss being represented in its pages.

All new members who join before April 1st, 1913, will have their names in this book.

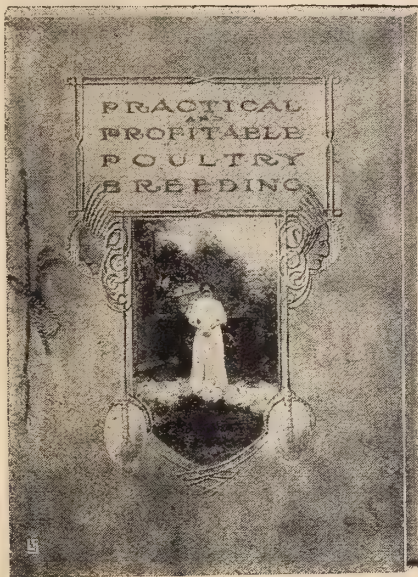

Write for full particulars, advertising rates, etc., to M. H. Lindsey, secretary-treasurer, Northville, N. Y.

The W. Etzensperger Rose and Single Comb Reds made the following winnings in the hottest class of Reds ever gotten together at Chicago: 2d pen S. C. Reds, 14 pens competing; 2d cock, 32 birds competing; 4th pullet in class of 38. Rose Comb Reds, 5th pen, 13 pens competing; 3d pullet, 11 in class. His 1st Chicago cock bird is the same that won 2d at the last show. The prize winners and near kin will head and be used in Mr. Etzensperger's breeding pens the coming season. His Reds are red all over, having great type and fine color. He has a limited number of cockerels and pullets to spare. Write

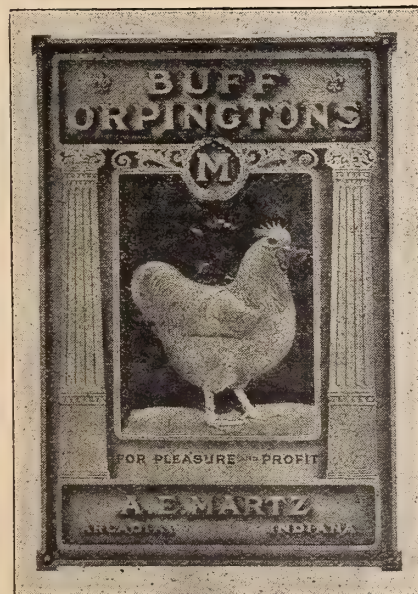

him for full particulars. Address W. Etzensperger, Willoughby, Ohio.

## THE MILWAUKEE SHOW.

The eleventh annual show was the best ever held in Milwaukee, due to the hard work of Mr. A. T. Keipper. The show was cooped, like the Chicago show, with the Keipper collapsible coops. The awards were placed by D. T. Heimlich, F. Travis, G. M. Wells, J. E. Greenwald, F. Harrison and Wm. Halbach, over 2,000 birds being exhibited which were of high quality, and the attendance was good.

J. C. Fishel's cuts and book on White Wyandottes has never been equaled by any breeder of this variety. Containing 64 pages of everything pertaining to housing, feeding and breeding White Wyandottes, it is easily worth the 25 cents they ask for it.

Another fine catalog is A. E. Martz's Buff Orpington book. His birds are noted for their remarkable quality the world over and the book is in keeping with the quality of the birds. Better send for it. It's free.

Besuden Brothers won at Cincinnati on their Buff Wyandottes: Cockerel, 1-2-3; hens, 1-2-3-5; cockerels, 1-2-3; pullets, 1-2-3-5. This strain has a long show record and is the best in the land.

Buschmann-Pierce Red Farms, Carmel, Ind., had a display at the Cincinnati show of cock and four Rhode Island Red hens, the color of which was the finest ever seen, proving their strain non-fading.

Herrick Poultry Yards, Durand Michigan won at Cincinnati, January 23-24, 1913, 1 cock, 1, 5, cockerel. Mr. Herrick's Single Comb Black Orpingtons have won for years at our best shows including Chicago and Detroit.

## White Rocks

Eggs from pens headed by 1st Phila.; 1st Allentown Pen, and 1st Pittsburg Cockerels at \$5.00 per 15. Only the cream of our flock mated.

Koons Farm, Treichlers, Pa.

## Single Comb Reds

Single Comb Black Minorcas. Eight years a breeder of these two breeds. The greatest of all winter layers. Special mated pens to produce show birds and prize winning stock. Stock and eggs for sale in season.

GRAND RIVER POULTRY YARDS  
H. H. LACHELT, PROPRIETOR, MARKESAN, WIS.

## Buff Rocks

Unite utility with highest exhibition qualities. Win at Great Mid-West Show at Chicago, Dec. 1912, 2nd and 3rd pullet and 5th cockerel. At Washington Heights, Jan. 1913, 1st, 2nd and 3rd cockerel; 1st, 2nd and 3rd pullet. No better blood obtainable at any price. EGGS, \$3.00 per 15; \$5.00 per 30.

C. E. Clapp, Groveland Ct., Morgan Park, Ill.

## Laugh at Expressman and Postal Clerks

—as they do at your pasteboard packages. Think of the jam of Parcel Post and Express articles and then ship your fresh eggs and hatchings in

## Safe-Eg-Paks

Wooden and Returnable. Each egg surrounded by a cushion of air provided by double cushioned compartments. "Hatchability" of

settings insured by non-vibration feature. Packed instantly. No wrappings. 7 sizes. A really perfect package for Parcel Post shipments.

## Star-Chic-Box

WARMTH without draft. Air renewed automatically. No other boxes can shut off air supply because of projections on all sides. Circular interior — no square corners. 3 sizes. Makes an ideal temporary fireless brooder.

Write us details of your shipments and we promise to solve your problems, increase your profits and win new customers.

Star Egg Carrier & Tray Mfg. Co.

100 Dallas St., Rochester, N. Y.

## KILL THEM

One application of Licene will kill every louse on your birds and will keep them free from lice for six months. The nits will hatch but Licene kills them after they are hatched. Read what M. Nie, one

of the foremost breeders of White Rocks for the past seventeen years, says of Licene.

"Gentlemen: About three months ago I used Licene on my birds, up to date have not seen any lice and think without question it is the best lice killer on the market today. Yours truly, Nie Poultry Yards. By M. Nie, R. R. 2, Pasadena, Calif.

Price 50c; enough for 200 birds; postpaid. Money refunded if you are not satisfied.

SHOEMAKER'S  
POULTRY BOOK

## AND ALMANAC.

There is nothing in the world like it. It contains over 200 large pages with many fine illustrations. A number of BEAUTIFUL COLORED PLATES OF FOWLS — showing them in the natural color. Tells all about all kinds of thoroughbred chickens, with life-like illustrations. Prices of eggs for breeding purposes. TELLS how to RAISE POULTRY successfully, their care and management and how to treat all diseases common among them. Gives illustrations and descriptions of convenient poultry houses, and plans to build them.

ALL ABOUT "GLOBE"  
INCUBATORS & BROODERS

with fine illustrations, complete description, and lowest prices. ALL ABOUT OPERATING THE INCUBATOR. This chapter is unusually complete, and worth much more than the price we ask for the whole book. This Poultry Book is worth dollars to anyone interested in the raising of fowls. IT IS AN ENCYCLOPEDIA OF CHICKEN-REARING, and no one can well afford to be without it. Will be mailed to anyone upon receipt of only 15c. Money refunded if not pleased.

C. C. SHOEMAKER, Box 605, Freeport, Ill.

## THE ILLINOIS STATE SHOW.

The annual exhibition of the Illinois State Poultry Association, held at Springfield, was the most successful exhibition ever held. Twenty-four states were represented, one exhibit coming from Walla Walla, Wash.

The management deserves the praise of every poultryman for their efforts in running such a magnificent show, and for the entertaining of visitors. On Wednesday evening they gave a banquet at the St. Nicholas Hotel, which was attended by every exhibitor present. Among the best speakers were Henry Steinmesch, Thos. S. McCoy, O. L. McCord, J. C. Johnson, Geo. Heyl, John Henry Lynch, T. B. Elliott and Dr. Le Gear. The speech of Mr. Lynch impressed us as being the most forceful of the evening.

Among the enterprising firms who had booths at the show were Joe Schaefer, displaying "Globe Chicken Feed"; J. A. Leeland, exhibiting Columbian Wyandottes; Close-to-Nature Oats Sprouters and the Cyphers Incubator Co.

On account of not being able to obtain a marked catalogue we give a few winners from notes: Banded Plymouth Rocks, 170 birds exhibited. Winners were: W. H. Hoover, Taylorville, Ill.; W. H. Shaw, Canton, Ill.; F. M. James, Toulon, Ill.; Bandy Bros., Barnett, Ill.; Chas. Fritz, Staunton, Ill.; Mrs. Chas. E. Popham, Charleston, Ill., and G. A. Walker, Polo, Ill.

Buff Plymouth Rocks, 236 birds—a hot class. Winners: W. S. Cotton, Walla Walla, Wash.; Dr. C. W. Coolidge, Bristol, N. H.; W. S. Robison, Fayette, Mo.; E. H. Lichtenwalter, Girard, Pa.; C. E. Barnes, Taylorville, Ill.; F. C. Shepard, Toledo, Ohio; H. A. Jacobs, Peoria, Ill.; T. B. Elliott, Wellston, Mo.; Vierheller Bros., Pittsburg, Pa.; W. A. Vasconcellas, Williams-ville, Ill., and J. J. Bleakley, Abilene, Kan.

White Plymouth Rocks, 151 birds. Winners: H. W. Halbach, Watford, Wis.; A. D. Severe, Dows, Ia.; Chas. A. Simmonds,

Camp Point, Ill.; F. H. Holloway, Lytton, Ia., and Dr. L. A. Le Gear, St. Louis, Mo.

Partridge Plymouth Rocks, 66 birds. Winners: Kellogg & Kellogg, Cambridge, Ill.; G. S. McAfee, Springfield, Ill.; Warner & Hopson, Girard, Ill.; J. W. Newell, Girard, Ill.; F. Landgraf, Marissa, Ill.; J. D. Primm, Athens, Ill.; John Liljequist, Davis, Ill.; J. B. Taylor, Cambridge, Ill.; W. R. James, Long Point, Ill., and Jas. L. McDavid, Hillsboro, Ill.

Silver Wyandottes, 76 birds. A. & E. Tarbox, Yorkville, Ill., swept the show. C. Schmidt, Red Bud, Ill., also was one of the winners.

Columbian Wyandottes, large class, J. A. Leland, Springfield, Ill., and W. F. Christen, Pleasant Plains, Ill., won most of the prizes.

White Wyandottes, 133 birds shown. Winners: H. Cass, Buffalo Hart; F. E. Todd, Peoria; A. T. Franz, Jacksonville; N. Hill, Dixon; Mrs. A. Seymour, Murrayville; C. M. Bailey, Decatur; C. A. Carman, Petersburg; H. L. Logue, Neponset; A. A. Wente, Taylorville, and H. C. Rathgeber, Girard; all from Illinois.

S. C. Rhode Island Reds, 91 birds shown. Winners: E. W. Neahood, Webster Groves, Mo.; A. Haskins & Son, Jesup, Ia.; H. T. Marshall, Serena, Ill.; H. E. Holloway, Herscher, Ill.; C. P. Scott, Peoria, Ill.; Mrs. G. F. Gray, Springfield, Ill.; R. F. McWhirter, Decatur, Ill.; Mrs. C. B. Baker, London Mills, Ill.; Mrs. J. W. Cleary, Jackson-ville, Ill.; H. H. King, Whitewater, Wis.; Mrs. W. A. Fletcher, Smithshire, Ill., and Prof. J. D. Conlin, Carlinville, Ill.

S. C. White Leghorns, 130 birds shown. Winners: Robt. T. Brown, Springfield, Ill.; Hodgen & Golden, Petersburg, Ill.; B. F. Thomas, Lincoln, Ill.; A. D. Taylor, Springfield, Ill.; Lilly White Poultry Yards, Lincoln, Ill.; F. G. Gurley, Galesburg, Ill.; Eugene C. Smith, Aurora, Ill.; I. A. Engle, Latham, Ill.

R. C. White Leghorns, 26 birds shown. Winners: G. A. Rigler, Bentonport, Ia.;

Lilly White Poultry Yards, Lincoln, Ill.

S. C. Brown Leghorns, 39 birds shown. Winners: Rosemont Farm, Webster Groves, Mo.; W. C. Does, Lstant, Ill.; G. L. Hornbrook, Decatur, Ill.; H. C. Ingalls, Riverton, Ill.; W. S. Danhorst, Quincy, Ill., and A. F. Lehman, Toulon, Ill.

S. C. Buff Orpingtons, 117 birds shown. Winners: F. A. Kaup, Chicago; Mrs. L. A. McClelland, Williamsville, Ill.; C. C. Miller, Bloomington, Ill.; J. W. Cruzan, Mattoon, Ill.; D. L. Warner, Kirkwood, Ill.; A. A. Anderson, Macon, Ill., and N. Hammer, O'Fallon, Ill.

S. C. White Orpingtons, 104 birds shown. Winners: J. B. Harris, Astoria, Ill.; G. H. Woolington, Monticello, Ill.; H. Gray, Staunton, Ill.; W. T. Heaps, Kewanee, Ill.; T. A. Scott, Bethany, Ill.; R. M. Perkins, Springfield, Ill.; G. M. Layman, Greenville, Ill., and Geo. Brants, Pekin, Ill.

Among the prominent visitors at the show were Henry Steinmesch, St. Louis; John Henry Lynch and Mrs. Lynch, Edwardsville; Mrs. E. V. Shultz, Webster Groves, Mo.; Mrs. E. W. Mahood, Webster Groves, and R. V. Hicks, Topeka, Kans.

## CLEVELAND SHOW.

The first annual exhibition of the Cleveland Poultry Breeders' Association Company was held in the Tuxedo Auditorium, January 6 to 11, 1913, and the exhibits surpassed the expectations of the stockholders. There were about 1,500 entries and they would have been perfectly satisfied with 800. The attendance was large and the show was a great success financially. The money was ready for the winners and they closed with money in the treasury. They gave 25 fine silver cups and everybody was happy. Genesee Uniform Cooping was used, adding greatly to the attractiveness of the whole appearance. This association has set the dates for next year on January 5-10 and expect to secure Gray's Army. The officers were F. C.

CANONSBURG, Pa.

**"Poultryology"**  
This beautifully bound book contains 144 pages, 70 pictures, drawings and plans.

## Vigor-Big Hatches-Early Laying-Success

Your ability to succeed in the poultry business is measured by the vigor of your flock. Hereditary constitutional vigor is the one character above all others which your poultry should possess.

Yesterlaid Egg Farms are vigor specialists. They raise Superior Standard-bred White Leghorns by the thousands which are so rugged, lusty and thrifty that their chicks inherit their constitutional vigor and hatch like popping corn.

They Lay—They Win. Yesterlaid breeders produce perfectly shaped, chalk-white, big eggs, their pullets lay early—at four months—in customer's hands. Yesterlaid Leghorns are exhibition fowls too. Chicks hatched from their eggs win in the hands of customers: names on request.

The Yesterlaid method of selecting, mating and feeding their stock insures heavy laying and big hatches. The

**Poultryology** tells how to build hen houses; how to raise money-making laying hens by the thousands, how to feed them to make them lay when the weather is coldest; how to house them successfully in big flocks of 500 to 1000; how to market eggs to get 60c a dozen when the market price is 30c. It tells how to mix rations that make chicks grow rapidly, that make hens lay, and that fatten broilers in 7 to 12 days. It tells how to pedigree poultry; how to make louse killer; how to preserve eggs; what it costs to feed a hen a year; how many eggs a hen will produce a year, and hundreds of other things you want to know.

State Experiment Stations and other Institutions recognize the Superiority of Yesterlaid Leghorns. Fifteen Experiment Stations have bought Yesterlaid stock or eggs.

If you want Yesterlaid eggs that will hatch big husky quick growing chicks for you this season order at once. Last season Yesterlaid customers had to "stand in line" and wait their turn for hatching eggs and the demand could not be fully supplied until almost June. Don't you be one that has to wait this season. Place your order now.

The Liberal Yesterlaid Guarantee insures you absolute satisfaction.

Price \$1.00 Postpaid. Write for special new customer offer which includes "Poultryology" free.

YESTERLAID EGG FARMS COMPANY

DEPARTMENT 5

PACIFIC, MISSOURI

Stier, president; G. W. Cunningham, first vice-president; Dr. R. H. Lindhorst, second vice-president; A. E. Rehburg, secretary; F. C. Kriews, treasurer, and I. H. Bush, superintendent. So well did these gentlemen fill their respective offices that everything went off as scheduled. A. H. Emsch, Toledo; J. E. Gault, Chippewa Lake, Ohio; L. A. Stream, Mt. Vernon, Ohio, placed the awards. Bear this show in mind for 1913. —H. H. Coburn.

#### AMERICAN PLYMOUTH ROCK CLUB.

The annual meeting of the American Barred Plymouth Rock Club was held with the South-Eastern Poultry Association at Charlotte, N. C., on Saturday, January 11th, at 3 p. m. Vice-president R. L. Simmons presiding. The minutes of the last meeting were read and approved. Two hundred and forty-one new members were admitted to the club. The treasurer's report was adopted. The following officers were elected to serve for the ensuing year: President, H. P. Schwab; vice-presidents, E. B. Thompson, A. C. Smith, Victor Bradley, C. H. Latham, C. E. Spagh, M. W. Baldwin, R. L. Simmons. Executive committee: C. H. Welles, S. T. Divinia, A. C. Hawkins, Wm. E. Bright, H. M. Kenner, Amos Vogt, James T. Huston. Secretary-treasurer, Henry D. Riley, Strafford, Pa. A motion was made instructing the secretary to publish a club catalog the coming spring and to solicit advertisements and suitable articles for the same. The secretary was instructed to draft an amendment to the Constitution, to provide for the election of 15 honorary vice-presidents, to be elected at the annual meeting. Charges were brought by Messrs. E. B. Thompson and C. H. Welles against Chas. W. Tillford, and after hearing the charges and Mr. Tillford making no defense, the club voted to expel Tillford. No other business the meeting adjourned. In regard to the catalog to be published this spring, every breeder of Barred Rocks should send in his name and join at once so that he may have his name in the list of members. Initiation fee and dues, \$1.00.

HENRY D. RILEY, Secretary.

Strafford, Pa.

#### THE CINCINNATI SHOW.

The Cincinnati Show, known as the Great Music Hall Show, held Jan. 23-29, 1913, was one of the best shows of the season. The Association is incorporated and has the following classy list of stockholders: Bruce & Abbott, Whiteland, Ind.; C. A. Besuden, Cincinnati; H. B. Hark, Glendale, Ohio; Ideal Poultry Farms, Cincinnati; Carl Carter, Columbus, Ind.; H. C. Dipple, Indianapolis; Rahe Seed Co., Cincinnati; Aldrich Poultry Farms, Columbus; E. B. Rogers, Cincinnati; F. F. Besuden, E. Norwood, Ohio; Asa G. Chandler, Jr., Atlanta, Ga.; O. L. McCord, Danville, Ill.; W. C. Pierce, Indianapolis; F. E. Harrison, Menominee, Mich.; W. W. White, Newport, Ky.; Chas. G. Pape, Ft. Wayne, Ind.; Walter G. Renaker, Cincinnati; Lewis P. Smith, Cincinnati; John A. Murkin, Nashville, Tenn.; Theo. Hewes, Indianapolis, and W. Besuden. It goes without saying that no other association is backed by more up-to-date and better poultrymen. The attendance was large and birds of exceptional high quality. The competition was keen and it was indeed a great honor to get a place. There were eight judges employed and the ribbons were up promptly—everybody satisfied and happy.

Chas. G. Paper and W. Besuden were the superintendents and proved themselves a very capable team. The office work was systematically handled by W. C. Pierce. The successful ones among our advertisers were: Sheffield Farms, Partridge Wyandottes, 1st, 2d, 3d, 4th cock; 1st, 2d, 3d hen; 1st, 2d, 3d, 4th cockerel; 1st, 2d, 3d, 4th pullet; 1st, 2d, 3d pen. Bruce & Abbott, Whiteland, Ind., S. C. Buff Orpingtons, 1st, 2d cock; 3d, 5th hen; 1st, 2d, 3d, 4th cockerel; 1st, 2d, 3d, 4th pen; 1st, 2d young pen; 1st old pen. I. L. Adair, Millersburg, Ky., S. C. Black Orpingtons, 3d cock; 2d, 4th cockerel; 2d, 5th hen; 1st, 3d, 5th pullet; 1st, 3d pen. J. A. Leland, Springfield, Ill., Columbian Wyandottes, 1st cockerel; 1st, 2d hen; 1st, 2d pullet. J. H. McDaniel, Warsaw, Ky., Columbian Wyandottes, 1st cock; 2d, 3d cockerel; Golden Wyandottes, 1st, 2d cock; 1st hen; 1st, 2d cockerel; 1st pullet. Besuden Bros., Cincinnati, Buff Wyandottes, 1st, 2d, 3d, 5th cock; 1st, 2d, 3d, 5th hen; 1st, 2d, 3d cockerel; 1st, 2d, 5th pullet. G. A. Clark, Seymour, Ind., R. C. Black Minorcas, 1st, 2d cock; 1st hen; 1st, 2d, 3d cockerel; 1st, 2d pullet. G. Earl Hoover, Matthews, Ind., Barred Plymouth Rocks, 5th cock; 2d, 3d hen; 1st, 4th pullet; 1st, 4th, 5th pul-

## Rose Comb Black Minorcas

### POULTRY FANCIERS OF NATIONAL CAPITAL HOLD BIG MEETING.

The largest and most enthusiastic meeting of poultry and pigeon fanciers ever held in the national capital was the one held February 14 at the finely appointed assembly rooms of the Chamber of Commerce.

This meeting was called by the writer to organize a large club; to hold monthly meetings at which illustrated lectures on poultry would be given by prominent men connected with the Department of Agriculture, Maryland and Virginia State Experiment Stations; to enable those not well versed in poultry matters to compare notes and learn from the experiences of others; and lastly, to perfect plans for the holding of future shows of such proportions that the world will fairly startle. Our motto will be "Harmony" and "We lead, others follow."

It has long been known that the national capital, "Washington, D. C.," has never had a poultry show commensurate with its general importance, and it was to this end that this meeting was called to lay plans to perfect the greatest poultry club or organization that this great national capital has ever known.

It was also recognized that we must have well and favorably known business men at the helm, otherwise we would be in the same position as before; therefore a committee was chosen of Mr. P. F. Sutor, temporary chairman; Mr. Chas. M. Catlett, secretary, and Mr. A. B. Claxton, treasurer, to wait upon several of our best business men and urge them to accept the higher positions. We don't think this will be very hard to accomplish, as all of them are interested in poultry or pigeons, and it possibly only remains for the committee to show them what we want to do for this city and "More and Better Poultry."

We also recognize the fact that we need the assistance of the poultry press, that it must take an active interest in this matter, for this is as much their city as ours. Therefore we extend an invitation to every poultry paper to join us and make the National Capital Show remind one of "The shot that was heard round the world."

Specialty clubs were also favorably spoken about and an invitation is extended to all to hold their next annual meeting in this city. We expect to hold our show December, 1913, or January, 1914, in such a way that we will not conflict with New York, Philadelphia, Boston, Baltimore, or any of the other large shows.

This club (with dues \$1.00 per year) is planned in such a way that success is the only thing in sight.

We have two halls here, one, the best thing our National Guard can call an "armory," which will hold about 3,500 single tier, and Convention Hall, that will hold fully 10,000 birds single tier, both easy of access and well lighted day and night. No pains or money will be spared to make the future shows something to be remembered, and the winner of a tenth place can pat himself on the back and advertise the fact.

Now, Mr. Editor, this is not hot air, but simply facts plainly stated, and if you are with us we desire to thank you and state that you will be well taken care of at this Big Show.

### WHITE PLYMOUTH ROCK CLUB.

The annual meeting of the National White Plymouth Rock Club was held at Springfield, Illinois, on January 8th, 1913, in conjunction with the nineteenth annual exhibition of the Illinois Poultry Association in the great Armory building.

The meeting was largely attended by White Rock breeders from a large geographical area, and the meeting promises to do much good for the White Rock breed. The following officers were unanimously elected for the coming year:

Geo. H. Hildebrand, Meadville, Pa., president, re-elected.

James V. Johnson, Little Rock, Ark., secretary-treasurer.

Dr. L. E. LeGear, St. Louis, Mo.; D. E. Gray, Groveland Station, N. Y., and Martin F. Schultes, Bartlett, Tenn., executive committee.

The administration, which is thoroughly enthusiastic and progressive, promises to put in a year of strenuous work in building up the club and advancing the interests of this very popular breed of poultry.

The exhibit at the Springfield Show totaled nearly 300 birds and was of marvelous

OCULUM increases egg yield 20 per cent; a free trial; ad page 594.

## FISHER'S BUFF ORPINGTONS

Are known America over, winning at all the prominent shows, including Madison Square Garden, Chicago, Cleveland, etc. Mention A. P. J. when writing. C. E. Fisher, Box 391, McConnellsville, O.

## ORPINGTONS

Eggs for setting. Four pens S. C. Buff Orpingtons, utility and show. Are hatching strong and 75% in Feb. One pen S. C. White Orpingtons. Pheasants and White Embden geese. Send for circular.

JENNIE MILNER, NORMAL, ILL.

## LETTERHEADS FOR THE POULTRYMAN

250 Letterheads \$2.95; 500 Letterheads, \$3.45; 1000 Letterheads, \$5.45; 250 Envelopes, \$1.95; 500 Envelopes, \$2.95; 1000 Envelopes, \$3.95. Letterheads and envelopes of best bond paper. We furnish cut of any breed of poultry and pay all shipping charges. Our prices are as cheap as good concienious work can be done for. If you wish letterheads that will be a credit to you and your business let us know. Samples on request. Mention breed. Chicago Letterhead Co., 710 Cambridge Bldg., Chicago.

## EGG BOXES

Protect eggs from heat, cold, breakage and theft. The tightest, neatest, lightest and strongest box made. 15 egg size, weight each, 10 oz., price per doz. \$1.25  
30 " " " " 1 lb. " " " 2.75  
60 " " " " 1 & 1/2 " " " 4.50  
100 " " " " 3 " " " 8.00  
Sample 15 egg size, postpaid, 25 cents. Circular free  
Canfield Coop Co., 808 S. State St., Syracuse, N. Y.

## WHITE WYANDOTTES

By the most exacting care and attention extending over a continuous period of more than twenty-five years, producing but a few birds each season and these by breeding from pairs and trios, I have established a type of White Wyandottes closely approximating standard requirements that reproduce themselves with marked uniformity. A cull rarely results from my matings and high class specimens predominate. While I do not claim to have the "World's Best" I do claim to produce a much larger per cent of high class specimens than any other breeder. My yards have been visited by many prominent judges and fanciers, not one of whom has failed to concede my claim. I have a few rare good birds that you can buy at prices you can afford to pay if you want something right, that you may know what you are buying. I send on approval and pay return charges if not entirely satisfactory. I am offering a few settings of eggs, not from stock mated for the purpose, but from the identical birds I breed from. Fertility is guaranteed.

W. S. COBB, UNION BANK BLDG., JACKSON, MICH.

## BARRED ROCKS OF THE BETTER QUALITY

### EGGS : EGGS

Wherever our birds are shown they win—The Great Allentown Fair, Trenton Inter-State Fair, Williamsport and Philadelphia. Our eggs for hatching are of the highest standard and fertility.

### Our Mating List Is Now Ready

Eggs \$2.00 to \$5.00 for Our Best Matings

Choice high class breeding stock for sale. Cockerels \$5.00 up. Pullets \$3.00. Perfect in shape, color, and bred from winners. Buy from the farm that gives absolute satisfaction. Mention this paper when writing.

## EASTERN IDEAL FARM

CHAS. F. ROSENOW, MANAGER  
NORRISTOWN : PENNSYLVANIA

quality throughout, the award for the best bird in the entire show, all varieties competing, was placed on a White Rock cockerel exhibited by a club member. The meeting was one of the most successful ever held by the club. For complete list of awards see records of the 19th annual exhibition of the Springfield Poultry Association, January 6th to 11th, 1913.

JAMES V. JOHNSON, Secretary.

## INTERNATIONAL POLISH CLUB.

We are now preparing copy for our first annual year book, which will be strictly in keeping with the policy of the club—down to the minute. In other words, it will be abreast of the times, and will be issued at an early date to all lovers and breeders of the Polish or Polish Bantams. We extend to you a cordial invitation to join our ranks and help boost the International Club and the breed. Our membership fees are as follows: Annual membership, \$1.00 each year; life membership, \$10.00 and no assessments. If you are a live wire, now is the time to get busy and send in your application and fee, also an article on the merits of the Polish fowls; and last, but not least, send for our advertising rates and place an ad. in our year book if you want to reach the better class of buyers. For application blanks, advertising rates, or any other information, address

M. V. CALDWELL, Sec'y and Treas.  
Route No. 4, Lisbon, Ohio.

## WHITE MINORCA CLUB.

The annual meeting of the American Single Comb White Minorca Club was held at Madison Square Garden January 2, 1913, and the following officers were elected for 1913: President, Mrs. J. G. Osborne, Fabius, N. Y.; 1st vice-president, H. J. Teetz, Gloversville, N. Y.; 2nd vice-president, N. J. Cole, Poughkeepsie, N. Y.; 3rd vice-president, P. Kendall Callaway, Chickasha, Okla.; secretary and treasurer, C. Augustus Raschke, Kingston, N. Y. The club is in a flourishing condition and the gain in membership during the past year has been very gratifying: our efforts to place this noble breed of fowls before the public is bearing fruit, and no doubt our membership will double this year. Our prediction concerning this favorite of ours is bound to come true.

The exhibit at Madison Square Garden was one of which the club members are very proud. Judge Story was very enthusiastic over the S. C. White Minorca exhibit and pronounced the 1st cock as being the finest S. C. White Minorca he had ever seen or judged, and to use his own expression, "He was nearly perfect." The opinion of a great many other fanciers was that he was the finest S. C. White Minorca they had ever seen, White or Black. The first cockerel was also a very promising bird, and a fine specimen of the breed, pure white, good shape and rangy. First hen and pullet were typical Minorcas. The exhibit brought forth much favorable comment.

The club decided that during the season of 1913-14 that the special club ribbons shall be awarded at all shows where members exhibit; also that four \$10.00 cups be offered, one in the North Middle West, the West, the South Middle West and the East, and at all other State shows where 5 members exhibited, instead of ten as heretofore.

To all who breed or are prospective breeders of this noble breed of fowls that are becoming nobler every year, we invite you to join us and win some of these prizes. The prizes may be nice things to win and have, but you will find the fowls much better than the prizes. To those who breed S. C. White Minorcas we say that the breed deserves your encouragement, and the club your help and membership. Send for a Club Catalog.

C. Augustus Raschke, Sec'y-Treas.  
Kingston, N. Y.

## AMERICAN DOMINIQUE CLUB.

Report of annual meeting of National American Dominique Club at Boston Show, January 9, 1913. Officers elected: President, W. H. Davenport, Griswoldville, Mass.; vice-president, Edson W. Safford, Montrose, Pa.; secretary-treasurer, A. Q. Carter, Freeport, Me. Executive Committee: F. E. Fowler, Meriden, Conn.; L. A. Austin, Pittsfield, Mass. Honorary State Vice-Presidents: Charles E. Taylor, Freeport, Me.; F. S. Peaslee, Lakeport, N. H.; W. B. Atherton, Randolph, Mass.; R. C. Dimon, Hartford, Conn.; Geo. H. Dederer, Mt. Vernon, N. Y.; F. S. Benson, Glen Ridge, N. J.; S. F. Yerkes, Mt. Airy, Philadelphia, Pa.; Clark Robinson, Columbia, Mo.; Alta Plank, Woodburn, Ore.

## DON'T HATCH EGGS

Buy day old chicks, stronger chicks, bigger chicks, better chicks, that's what our customers all say. 3,000 chicks ready for delivery weekly. We offer now;

HARRY STACEY BENTON, Owner  
R. F. D. 5, SO. NORWALK, CONN.

## MAPLE GRANGE POULTRY YARDS.

The people who succeed with Barred Plymouth Rocks are the breeders who try, who persist and who study and learn by experience. The lessons are there and while nature is not a fickle teacher, still it is not so mysterious as some would suppose. We point with pride to Mr. S. M. Goucher, Moorestown, N. J., for within the past five or six years he has not only made his name popular among the leading breeders but he has given to it a ring of quality that usually takes double those years to attain.

For four years his birds have been conspicuous winners at Williamsport's great show, in classes of from 100 to over 200 birds; also at Camden, N. J., and at Philadelphia he has shown with marked success and credit to his line.

We lately enjoyed a day with him at his home and found that since our last visit a year ago he has about doubled his plant and his flock. He asked us to be critical and to make any change in his matings we thought best, and after seeing all we were free to admit that he had mated correctly and that we could not see cause for even one change that would insure better results. He knows his birds and the demands and had the best of reasons for placing every bird mated. The matings are all small ones, with from five to seven females mated for quality and improvement, of which he is assured.

## Cockerel Matings.

His cockerel matings this year are headed by his best males and winners. Here

was seen his first Philadelphia cockerel, December, 1911, lording it over one pen. This noble fellow well deserved all he won in specials for his color and barring and superior quality, for he also won the special for best cockerel in the American class, besides the valued blue ribbon. He still has the flaming red eyes and the strong, vigorous carriage with narrow barring and even from tip to tip. His mates are clean and snappy in barring and of proper, strong color, all with good eyes, small combs and nice-shaped heads.

The cockerel in first Williamsport pen headed another mating, as also did his cockerel heading his first Philadelphia pen, December, 1912. Here were also his Camden winners mated, making a very select lot, with every promise for the future.

## Pullet Matings.

We haven't at this time with us (on the road) a correct list of Mr. Goucher's winnings, in either males or females, to our regret, and must rely on memory for our statements, but we do know they have been many, and in females were particularly of value. In his pullet pens were all his winners in this line and we looked long and earnestly at these beautiful collections of quality. A male heading one of these pens was a superior bird in every way, large, sound and of magnificent, clean, sharp color and barring, shape of back ideal, wings beautiful, head grand.

Other matings of the same character with the females in all including his winners and others of the same line. The four pullets in his first Philadelphia pen are all pen sisters and just alike, with

the value of line breeding back of them.

His pens are large, with ample range, and the entire plant a model worth following. It is a beautiful plant in a superb section and in charge of people full of interest in their work. Mrs. Goucher, like her husband, is an enthusiastic fancier. Both have every reason to feel satisfied with the work and success they have made.

Mr. Goucher entered a pen of his birds in the Store's Connecticut Laying Contest and this pen proved to be one of the leaders in the class, with one of the females making an exceptional record by laying 104 eggs in 110 days (if memory serves us correctly). We hope to again visit this plant and to receive a full report of this pen's record in the contest in the near future, for such records are of great value and prove beyond question that the standard-bred is the most practical and best of all general purpose fowl.—H. P. Schwab.

## OF INTEREST TO POULTRY RAISERS.

We wish to call the especial attention of our readers to the ad, in another column, of Oculum, manufactured by the Hancock Inoculum Co., Salem, Va. Oculum is not only a remedy for cholera, roup, white diarrhea and canker, which has "made good" upon hundreds of poultry farms, but the chief value of Oculum is its tonic effect.

The manufacturers have authorized us to state that your flock inoculated with

# The New Simplicity

Spurred to action by the success of our Simplicity Feeder, we have sought greater improvements which would make the Simplicity so far superior to others that no comparison could be made.

## We Have Done It

The new Simplicity Poultry Feeder is without doubt the acme of human ingenuity, every part of this feeder has been literally dissected in order to find a chance for improvement and we truthfully say that the new Simplicity is the one perfect poultry feeder.

The Simplicity feeds any kind of grain either separate or mixed, it works from every direction, scatters the grain farther than any other feeder, is adjustable to the finest degree, will not clog up and will not get out of order at any time.

## We Prepay Express and Freight Charges

If your poultry supply house does not handle Simplicity Feeders, send us their name and address and we will send you three colored pictures of poultry suitable for framing and also a copy of our valuable book, "What and How to Feed," which gives valuable information on mixing rations, growing feeds, etc. We also prepay charges on all feeders ordered direct from us and will refund your money if they are not entirely satisfactory. Read our ironclad guarantee on the attached order blank. We furthermore guarantee that the feeder

## Is an Investment, Not an Expense

Simplicity Feeders will pay for themselves in thirty to sixty days and make money for you every day thereafter at the rate of 50 per cent a month. You will save more than a dollar's worth of feed per month to every thirty birds if you feed with our feeders and we will prove it to you in your own yard if you will fill in the attached blank.

We don't want you to take our word for it. Try it at our expense or ask your dealer. We know that if you install Simplicity Feeders you will not regret reading this ad and taking advantage of our offer. Remember we refund your money if you are not satisfied with your purchase.

References—American Poultry Journal, Chicago, Ill., American Poultry Advocate, Syracuse, N. Y.; Central Trust Co. of Illinois, Chicago, Ill.; etc.

Fill in the attached coupon for as many feeders as you require to feed your entire flock at least one week. Ten-quart size will feed a pen of ten to fifteen birds at least a week. Twenty-quart size will take care of a pen about three weeks or will feed a flock of 20 to 30 birds at least one week. Further information will be gladly sent upon request.

**SIMPLEX SUPPLY HOUSE**  
PONTIACA BLDG. : CHICAGO, ILL.

### IRONCLAD GUARANTEE ORDER BLANK.

Simplex Supply House, Pontiac Building, Chicago, Ill.

Gentlemen:—Enclosed please find \$..... for which send to address below .....size.....qt. SIMPLICITY FEEDERS, with the understanding (State Number) that you will refund my money if they are not satisfactory and I notify you to this effect within 30 days after receiving the Feeders.

Name.....Post Office.....

Street or Route.....State.....Express Office.....

Prices, Delivered:  
Baby 10-quart 20-quart  
Each.....\$ 1.25 \$ 2.50 \$ 3.50  
Lots of Six.....6.00 12.00 18.00  
Dozen Lots.....11.00 22.00 32.00  
Orders of less than six 10-quart or 20-quart feeders and baby feeders in dozen lots or less will be shipped by Parcel Post or prepaid express within a radius of 1,000 miles. Longer distances and larger orders for all points east of the Rocky Mountains will be shipped by prepaid freight unless otherwise instructed.

Oculum four times a year will, with reasonable attention, be the healthiest flock you ever raised and will outlay and outweigh any flock of the same size and strain you ever owned, and that they will refund the purchase price of all Oculum used during the year by any of our readers who wish to try it out as a tonic if results do not come up to the claims of Oculum.

Rev. A. M. Mannes, Mt. Vernon, S. D., wrote the company as follows on January 16, this year: Enclosed find \$1.00 for which please send me \$1.00 bottle of Oculum at your earliest convenience. The 50-cent bottle I got last spring was worth \$50.00 to me; one dose saved a valuable cock that would have succumbed within a few days.

Surely at the present price of eggs and broilers, thousands of our readers will order Oculum at once.

#### H. D. RILEY'S BARRED ROCKS.

For several years we have had the pleasure of visiting Mr. Riley, at Stratford, Pa., and with him inspecting his birds and matings year by year he has brought his line up the ladder of poultry fame in the show room and in the quality and value of their blood and breeding value. His birds have met the test of the great Madison Square Garden (New York) Show, Baltimore, Philadelphia, Cleveland and others, where records were made that are a credit to any line or variety.

This year Mr. Riley's line has made an other record and one of unusual value, which goes to show that his strain not only has the quality to win with but the quality to breed winners for his customers. This is the real test, and in this this line shines out strong during the past year. He has been given permission to use in his catalogue the state-

ments from several customers who last year bought eggs from him and hatched their winners from those eggs. The first prize pullet at the late Chicago show was hatched from his eggs. The first prize cockerel at the Boston (Mass.) Show was also hatched from his eggs, as also were the first and third prize cockerels at Canada's greatest show, the "Ontario," held at Guelph, December, 1912, with 69 cockerels competing. We also know of several other winners produced from eggs he sold the last two years.

Our day with Mr. Riley was well spent in going over his matings. To our mind, after handling, all his males and many females are easily 25 per cent stronger than ever before. The evenness and superb quality were especially noted.

There we saw in one of his pens his second New York cockerel of last year, who also won the color special. This bird has proven a wonderful breeder and as now mated should do even still better. His color and barring still feature him and he has filled out in grand form. Mates are a strong, even lot of fine size, the best of shape and desirable points.

Heading a pen close by is his third New York cockerel of this year, 1913. His honors were won in the strongest class of Barred Rocks ever brought together. This bird has come strong and promises to make one of the best ever. His line barring is admirable, very narrow and very bright and clean. His eight mates are a worthy collection, well balanced and we feel assured of results here.

His first Baltimore cockerel, 1912, and first Cleveland cock, 1912, follow in line, both retaining the great quality that placed them winners at those popular shows. The Baltimore cockerel in shade of color and style of barring was a feature last year and is today better than ever.

Besides these cockerel matings there are others headed by winners at New York, Williamsport, Cleveland and Baltimore, including both first and third cockerels at Cleveland, 1913. Both are very similar. They are bright and snappy and of excellent form.

#### Pullet Matings.

Mr. Riley has always been very strong in his female line; in fact, it was his winnings on hens and pullets that first attracted special notice to his line. Twice he has won first hen at the great New York Garden Show, and this, as in other years, he has been well placed there and at other shows. His matings in these were particularly pleasing to see. The males heading the pens are from his most famous winners, particularly from his first New York hens of 1911 and 1912 and first Cleveland hens of 1912 and 1913. They are very bright in color, handsomely barred and with prime form and head points. The females are just what we expected, knowing his line and record so well. They include all his winners and all that produced them.

Here and among these we saw and recognized many favorites of past shows and heard with interest their records and accounts of their breeding. Birds of this kind—winners and bred from winners—carry with them a value that words won't tell. Mr. Riley devotes all his time to his flocks and to the Barred Rock Club, of which he is secretary, and it is pleasing to see the success he is making with both. The Riley strain has had to be reckoned with in the past and will also have to be considered in the future.—H. P. Schwab.

J. A. Leland, Springfield, Ill., has some of the finest Columbian Wyandottes we have seen this season. Mr. Leland issued a large catalogue: send for one and mention A. P. J.

# Idlewood Poultry Farm

## THE MOST TALKED OF POULTRY PLANT IN THE COUNTRY

### BREEDERS OF

## Single and Rose Comb Rhode Island Reds and White Orpingtons

We are prepared to furnish the choicest quality in stock, eggs for hatching and day-old chicks. Our stock was exhibited this year at the great Pittsburg and Erie shows. Our winnings were as follows:

### Single Comb Rhode Island Reds

1st, 4th, 5th and 7th cockerels; 1st and 8th pullets; 1st, 2d and 6th pens; 3d and 4th cocks; 4th hen; 4 specials for type and color.

### Rose Comb Rhode Island Reds

1st, 2d and 3d pullets; 2d and 7th cocks; two specials for type and color.

Day-Old Chicks from Our Exhibition and Utility Stock a Specialty—Our hatchery is one of the largest in the country, having a capacity of 100,000 chicks. We are now booking orders for Spring delivery. Write us for further information and catalogue.

## Idlewood Poultry Farm : Swanville, Penna.

# "OCULUM"

Is a "wonder working" poultry remedy. It cures Cholera, Roup, White Diarrhoea and Canker in its worse form; increases egg yield 20 per cent; grows the finest chickens you ever saw; lessens your poultry troubles 50 per cent. So confident are we of the merits of OCULUM that we believe any honest poultry raiser will pay us when he "knows it does the work." At your dealers, or if you prefer, cut out this ad today and mail to us and we will trust you to do right by us.

**Hancock Inoculation Company, Box B, Salem, Virginia.** Write your name plain. Please send me a \$1.00, 50c bottle of OCULUM. I will test it fifteen days: if satisfied, will pay you; if not will return what I have not used.

Name..... Address.....

## Shield's S. and R. C. Reds

Winners at leading shows wherever shown. Young stock and last season's breeders and exhibition birds at reasonable prices. No better breeding. Write today.

## EXPERIENCE VERSUS THEORIES.

The best products manufactured today are those which are built on experience. Now, we will take as an example Farm Fence, because this is an article that most all farmers buy each year. A fence built upon Shop Theories is one thing, but a fence built upon experience to meet the farmer's requirements, one that successfully stood the test for years and years, is quite another matter. The Coiled Spring Fence Company of Winchester, Ind., whose ad appears in this issue, is making a fence that is built upon experience. It contains many practical ideas of farmers themselves, as they have been selling it direct to the farmer for 26 years. They have learned from experience what a farmer's fence ought to be to give satisfaction from a farmer's standpoint. You should write for their catalog at once.

## "THE WORLD'S BEST LAYERS" AS SEEN ON MIDLOTHIAN FARMS, TINLEY PARK, ILLINOIS.

By Louis A. Stahmer.

I have often heard about the magnificent records made by the fowls on this farm and know that the owners have for years been trap-nesting the different varieties which they breed, and on my recent visit was assured that they have succeeded beyond measure, by selective and line breeding, in producing varieties of fowls with phenomenal egg records. "Lady Show You" is without any doubt America's greatest egg producer. Coming from a strain of White Rocks that has been pedigreed for years, it is no wonder that her magnificent record of 281 eggs in twelve months, made at the Missouri State Experimental Station, will stand for some time, and as every egg weighed slightly over two ounces, it will be seen that she produced over five times her weight in eggs. Other remarkable layers at this contest who were added to the Midlothian Farm flock and winners of first prize were five Rhode Island Reds with a total of 1,042 eggs; a second prize pen of White Wyandottes with a record of 1,012; five Barred Plymouth Rocks with a total of 967 eggs, winners of fourth prize. The individual annual average of all these fowls is 201½ eggs per year. In addition to these five pens they have also secured a number of other record breakers of this contest.

Among others are Rose Comb Rhode Island hen, "Lady Hattie," with a record of 255 eggs, and Single Comb Rhode Island Red, "Lady Agnes," with a record of 236 eggs, and Single Comb White Orpington hen, "Lady Grace," with a record of 232 eggs, and White Wyandotte, "Lady Rose," with a record of 232 eggs, and Barred Plymouth Rock, "Lady Vera," with a record of 235 eggs, and a Single Comb Buff Orpington, "Lady Mary," with a record of 219 eggs, and Single Comb White Leghorn, "Lady Beatrice," with a record of 240 eggs, and four others with records of better than 200 eggs. All these records have been made under the personal supervision of Mr. T. Quisenberry, head of the experimental station.

They have spared no expense in obtaining the greatest layers of the birds competing at the experimental station, and as they have trap-nested for years their own flock this magnificent addition to their own strain will further strengthen the great record of their different pens to such an extent that the title of "The World's Best" layers is well claimed, we believe, for we have never heard of a greater number of fowls with better records than these.

In building up their eight varieties to their present state of perfection they have spared neither time nor expense. At the start they have paid as high as five hundred dollars for an individual specimen. Their foundation stock, at the time it was acquired, were representatives of the best practical fowls to be had.

These birds, under their management, have been mated and bred for increased egg production. They have been developed along these lines and today enjoy the distinction of being one of the very few strains that have not been inbred.

Their capacity for egg production cannot be equaled. They trap-nest annually eight hundred of the most promising pullets. After one year of trap-nesting, they take those that have the best egg records and mate them to produce the layers for the following year.

By this method they hatch only from the best. All the stock produced and of-

ferred for sale is therefore from the very best layers.

Midlothian Farms produce annually from six thousand to ten thousand head of stock. Fifty per cent of this number is culled out and sold either as broilers or roasters. This stock goes to the market department and is crate fattened and disposed of at very profitable prices to private trade in Chicago.

The poultry farms that have no market department sell this same grade of stuff as utility stock and whoever the unfortunate purchasers are they have bought stock that under no circumstances produce one cent of profit. There is not a farm in this country that culls as close as they do, as there are very few farms that have a market department.

### SIMPLICITY.

The word implies a great deal. It's the short cut to success, the keystone of fortune and the trouble eliminator.

Simplifying your business means decreasing the work and increasing the efficiency, resulting in greater product and less expense, or, when boiled down, means larger profit. Start now to simplify your poultry plant. The feeding proposition demands more attention than any other item and when given proper attention your poultry profits will be greatly increased.

Simplicity Feeders, made of heavy galvanized iron, take care of all your worries in this line. They are built and sold on merit. They feed your chickens nice, fresh, clean food when hungry. They keep the feed away from rats, mice and birds; they make your chickens scratch for their feed and save you the trouble of hiring a man for feeding or looking after them yourself every few hours.

By installing Simplicity Feeders you will save on grain, have less disease, less sparrows, less rodents, and get more eggs. The feeders will pay for themselves in less than two months, and they last a lifetime and never get out of order.

Simplicity Feeders are sold on an iron-clad money-back guarantee; they are shipped on trial and guaranteed to please. The Simplicity Baby Chick Feeder is a marvel. It will save many little chicks by feeding them nice, clean, fresh feed whenever they need it. It's something you have never seen before, a real chick saver. It's a treat to see the little fellows work it, and how they do enjoy the feed their metal mother throws out to them.

Prices so low, you can't afford to be without the Simplicity, whether you have 50 or 500 birds to feed. Let us send you a supply on 30 days' trial. Simplicity Supply House, Pontiac Building, Chicago, Ill.

We have been favored by the Cyphers Incubator Company, of Buffalo, N. Y., with a first copy of their complete catalogue of 1913, entitled "Profitable Poultry and Egg Production." This catalogue contains 244 pages and cover and while it is a catalogue of their incubator and supplies, it contains a vast amount of valuable information to the average poultry breeder. Chapter 1 tells what is possible in poultry meat production. Chapter 2 gives information on what can be done in the way of egg production. Chapter 3 is on deep-litter feeding experiments of 1912. Chapter 4 tells about quick maturity in general purpose fowls. Chapter 5 tells all about ages and weights of chickens for table use. Chapter 6 tells how to establish prolific egg-yield flocks. Chapter 7 is entitled "Today's Best Chance in the Poultry Business." Chapter 8 gives information on small scale poultry keeping on the practical basis. On pages 15, 16 and 17 they give full information about the Cypher Company's free bulletins and personal letter service. The Cypher company's service bulletins are 7½ x 10 inches in size and a hole punched in the back margin so that they can be preserved conveniently. To each customer they furnish, free of charge, a durable fiber paper binder which will hold 24 to 48 bulletins, so that later bulletins when received can be placed in the binder for future use. Their special letter service should certainly be of interest to every poultry man. This service is free to all without charge and with no strings tied to it. There are just two conditions, first, that the information or advice that you ask for shall bear directly on your own poultry interests, present or future; second, that you must be in earnest. If you need reliable data, practical information and helpful suggestions to apply to your special needs, whatever they may be, all you have to do is to write them fully and frankly and they will do their best to be of real service to you. There are a hun-

## Columbian and Silver Wyandottes

If you are looking for the very best in either of the above we can please you—our birds have demonstrated their quality by their winnings at Madison Square Garden and Boston for the last ten years.

J. F. Van Alstyne

Niverville, New York

## 60 S. C. RED COCKERELS

For sale at low prices. Eggs for hatching from prize winning pens. Satisfaction or money back. Write today.

T. MENDENHALL

RIDGEFARM, ILLINOIS

## BUFF AND BLUE ORPINGTONS

Miss Hooker, for twelve years a Blue Ribbon Buff Orpington breeder, is successfully breeding Blue Orpingtons of which she was the pioneer importer. Very little stock for sale. Illustrated catalog. Mating list on application. Eggs from Buffs, \$3-\$20 for 15; from Blues, \$15, \$20, \$25 for 15. Both strains heavy layers.

## Henrietta E. Hooker, South Hadley, Massachusetts

## S. C. Black Orpingtons

SPRING OF 1913—\$10 Eggs for \$4 for 13—Why are they \$10 eggs? Because they are the equal of any \$10 eggs in the United States, and all are from our celebrated Duke of Kent strain—the greatest prize winning strain of Black Orpingtons in America. Send for egg circular and beautiful 9x12 chromo. Very high grade young stock for sale. Mention Am Poultry Journal when writing.

FOSTER & JOHNSTON, R. R. 7, FORT WAYNE, INDIANA  
Honorary State Vice-President American Orpington Club

## MAPLEWOOD POULTRY YARDS

H. W. HAYNER, SUPERINTENDENT : ATTICA, NEW YORK

Again sweep the deck by winning the two most coveted prizes at the big Batavia Show (over 1300 entries), Jan. 22d to 27th, 1913.

### SILVER CUP FOR BEST MALE IN SHOW

(Won by 1st S. C. W. Leghorn Cock)

### SILVER CUP EXHIBITOR WINNING MOST POINTS

13 firsts, 14 seconds, 13 thirds, 8 fourths, 4 fifths and other specials too numerous to mention. Why not buy stock, eggs and chicks from a Farm that has proved its superiority and sells at reasonable prices. Send for catalogue and mating list of S. C. W. Leghorns, White Wyandottes, Pekin Ducks, Indian Runner Ducks. Stock and eggs for sale. Baby Chicks a specialty. Send for list of Winnings at Syracuse State Fair, 1912, International Show, Buffalo, 1913.

## THE HOPPER THAT FEEDS WHEN THE CHICKENS ARE HUNGRY

It saves the inconvenience of feeding at a regular time. When the chickens get hungry they go and eat. It is 30 inches long, stands 16 inches high, built with two compartments, one for dry mash and one for oats, holding one peck each. Between are two small compartments for grit, oyster shell or charcoal, holding about 2 quarts each.

## IT CAN'T CLOG

The pecking of the chickens in the trough operates vibrating tongues which bring down the feed.

THE O. K. SANITARY DRINKING FOUNTAIN is the handiest to use and the easiest to keep clean.

DOUBLE WALLED, TOP FILL—Cool water in summer, and nonfreezing in winter.

We are issuing a booklet describing this hopper and drinking fountain, and many other new, labor saving devices for the poultry yard,—also a complete line of Incubator and Brooder Supplies, Fixtures and repairs—Safety Lamps, Automatic Regulators, Incubator and Brooder Heaters, etc., etc. Send for catalog B20.

The Oakes Manufacturing Co., Tipton, Indiana

**THIS IS THE ALUMINUM "CONVENIENT" LEG BAND**  
Note the strong, secure fastener, so simple and complete—the number is not stamped in, but raised OUT—plain, readable—can't get full of dirt. Reaches you already bent in shape ready to put on—12 bands 20c; 30 for 45c; 60 for 75c; 100 for \$1.60. Sample Free—  
**H. O. SHAW, Box 1403, GRINNELL, IOWA**

WHEN YOU WANT SOMETHING

## EXTRA GOOD IN WHITE ROCKS

Eggs : Day-Old Chicks : Stock

Our famed Crystal Strain, Eastern Champions, satisfy the hard to please. Bred from trap-nested, individually pedigreed, record layers of exceptional quality, most carefully mated; vigorous, farm reared stock. The rare combination of show points and prolific egg production. Our interesting catalog awaits your request. It's free.

The Model Farms, C. G. Mueller, Prop., Box 542, Lansdale, Penna.

## ROUP AND WHITE DIARRHOEA

WHITING'S POULTRY REMEDIES ACTUALLY DO CURE

**ROUPENE Actually Does Cure Roup.** We don't care how bad the case is so long as the bird is not in the last gasps of death. **ROUPENE** cures Roup, Diphtheritic Roup, Canker and leaves no weakness or bad after effects. Just try **ROUPENE** once. Pick out a bad case, one if possible on which other remedies have failed. We guarantee a cure or refund money.

**ROUPENE** is a germ destroyer. It not only cures but prevents contagion. You don't have to quarantine the affected birds. It cures also Sorehead, Limberneck, Colds and Pip, which are all diseases of the same character. Price, 50c and \$1 a bottle.

**WHITE DIARRHOEA REMEDY** Prevents and Cures Diarrhoea, the disease that destroys more chicks than all others combined. If you will make the first two or three feeds of baby chicks bread crumbs moistened with Whiting's White Diarrhoea Remedy, and give them no other food it will prevent their having White Diarrhoea, or will cure them if they already have it. Don't take our word for it. Try it. We guarantee results or refund money. One of the largest dealers in baby chicks will not now sell a chick that has not been treated with Whiting's White Diarrhoea Remedy. Price, 50c a bottle.

One Chick Saved Pays for a Bottle

Whiting's Poultry Remedies are sold by dealers, or mailed direct on receipt of price. These are the two great disease scourges of poultry raising and Whiting's are the dependable remedies you need on hand all the time to make poultry pay.

The O. K. Sales Co., Dept. 1, 160 Pearl St., New York City, N. Y.

from twenty carefully mated pens, which contain our many winners at such shows as Madison Square Garden, Grand Central Palace, Boston, Allentown, Augusta, Chicago, etc. Our birds having won at these shows many firsts and specials in the hottest kind of competition. Every bird shown, as well as every bird in our breeding pens, has been raised by us on our farm and banded with our seamless leg band. Chicks, \$1, 50c and 30c each. Eggs, \$10, \$5 and \$3 per 15. Breeding and show birds for sale. Cockerels and pullets, \$2 and up. Write for mating list.

Chas. Staaff, Mgr., Florham Park, New Jersey

dred and one other matters in this catalogue that can't help but be of interest and benefit to the average poultry raiser and therefore every one of our readers should make it a point to get a copy of this catalogue, which is sent free on request if you will address the Cypher Incubator Company, Department 30, Buffalo, N. Y.

AT NEW YORK.

For many years Mr. H. N. Hanchett was a breeder and exhibitor of some of the best Buff Cochins in the country and has been an advertiser in every issue of American Poultry Journal for about 15 years previous to 1911. During that time he was located at Jackson, Mich. He is now located at Vineyard Haven, Mass., where he is breeding White Wyandottes. That he has birds of extraordinary merits is shown by his winnings at the "Garden" this year in a class of 261 birds, shown by 16 exhibitors. Mr. Hanchett states that he has but four matings for the coming season, as it is quality rather than quantity that he is after, and will have only a limited number of eggs to spare from each pen. We can not resist adding that if his White Wyandotte customers receive the same value and satisfaction as did his Buff Cochins patrons for 15 years or more, there will be no cause for complaint. During all the years his ad appeared in this paper not one person has ever written that he failed to get a square deal from H. N. Hanchett. See his advertisement in this issue and send for his printed matter if interested, addressing him at Vineyard Haven, Mass.—C. W. Zimmer.

REGALS AT BOSTON.

John S. Martin, Port Dover, Ont., the well known breeder of the famous Regal strain of White Wyandottes, made a grand win with his birds at the Boston show last month, where he won 1st, 6th cocks; 1st, 4th, 5th hens; 1st, 3d, 4th cockerels; 1st, 3d, 4th pullets; 2d, 3d, 4th pens; 1st display with a score of 72 points, which was 12 points more than all his competitors combined. He also won nearly all specials, including the \$100 challenge cup. This winning was made in a class of over 215 White Wyandottes.

RED "BLOOD WILL TELL."

The Red Ranch, at South Haven, Mich., S. C. R. I. Red specialists, that is able to boast "all breeders sired by champion cocks," on only eight entries at two shows, won twenty-six regular and special prizes. At the Western Michigan show, at South Haven: 1st, 2nd, 3rd and 4th cock and 1st, 2nd and 3rd hen; also eight club specials for shape and color. At the Southwestern Michigan show, at Kalamazoo: 1st, 2nd, 3rd and 4th cock and 1st, 2nd and 5th hen; also four color and shape specials. No young fowls exhibited this season.

On another page we present the photo of F. S. Smith, Box C and D, Hamilton, Ohio, the big Single Comb Buff Leghorn breeder. He has no other breeds and raises Buffs by the thousands. He has mated this year over 1,500 birds that are the select stock from over 47,000 raised in the past four years. Think of that number and you can be convinced that he has the best in the world. Mr. Smith has line-bred his Buffs for the last 15 years. He is an old advertiser and our representatives call on him every year and always find a fine flock of birds. His Buffs are noted for their great winter laying. He has pen records of 222½ eggs each year to the hen, and he has won more than his share of Ribbons and silver cups at thirteen of the big shows. He has 25 fine silver cups, ranging in value from \$10 to \$200.

He has stock for sale at all times and eggs and day-old chicks by the thousands. See his ad in this issue and if you want some of his valuable stock you will not make a mistake in Smith's Strain of Buffs.

L. J. Morris, Oberlin, Ohio, breeder of Buff and Columbian Wyandottes, won at the late Toledo show, on Columbians, 2d and 3d pens. His Buff Wyandottes have also won at Cleveland and other big shows. His stock has even surface color, fine head points, good shape and excellent legs and toes. His pens are all mated for the egg trade. Write him, and mention American Poultry Journal.

When in the market for Buff Plymouth Rocks, send to W. S. Robison, Fayette, Mo., for circular. Mr. Robison wins wherever he shows. He has several fine breeding cockerels for sale.

OCULUM increases egg yield 20 per cent; a free trial; ad page 594.

# Poultry Books

## AT A CUT PRICE

A complete list of poultry books that everybody interested in poultry should have. This list is made up with the idea of supplying the wants of all poultrymen, and covers about every phase of the industry; in fact, this list of books make almost a complete poultry library, and by taking them all at a cut price you will be well equipped to make a success of this business. The books in this list tell you how to line breed, how to feed for egg production, how to reduce your feed bill, how to mate to produce exhibition birds, how to prevent and cure diseases, how to mix a balanced ration, how to build poultry houses, poultry appliances, etc. Following is the list:

### DR. PRINCE T. WOODS' NEW BOOK HOW TO RAISE CHICKS

128 PAGES—35 ILLUSTRATIONS

A down-to-date manual on breeding poultry. Tells in plain language how to select and mate breeding stock, what to feed and how to feed it, how to care for and manage breeding stock, how to select eggs for hatching and how to care for them before and during incubation, how to get good hatches with incubators, how to raise chicks with hens and brooders, how to prepare home-made chick foods, how to build brood and colony coops. It also gives facts about White Diarrhoea, including prevention and treatment, and much other valuable information that cannot be obtained elsewhere. Price 75 cents.

### OPEN-AIR POULTRY HOUSES FOR ALL CLIMATES

By Prince T. Woods, America's Leading Authority on Practical Poultry Keeping

The best house book ever published. Be sure to read it before you build or make alterations in your poultry houses. 88 pages and 46 illustrations. Tells how to build the kind of houses that the most successful breeders all over the country are building and recommending. The "Fresh-Air House" has come to stay and you will want to build one. It means better fowls, freedom from disease in the flocks, better egg yield, better fertility, better chicks. No matter where you live, if you keep poultry you need this book. This book gives full plans and specifications. Price 75 cents.

### Origin and History of All Breeds of Poultry

This book gives a complete history and the origin of all the recognized varieties of chickens, ducks, geese and turkeys, and is illustrated with 198 colored pictures of fowls painted from life, something never before attempted by any publisher. This is, without question, the greatest book ever published on poultry. The artist's work alone on this book took almost one year's time to complete, but it shows the fowls in their natural colors and correct shape, and these colored pictures, together with the history of each variety, gives the fancier all the information to produce fowls for either exhibition or breeding.

**How to Mate**—This book also tells how to properly mate the different varieties of fowls to produce birds that will conform to Standard requirements. This is something that even the Standard of Perfection does not do. It tells you at a glance what it will take years of practical experience to learn. It is a book that no breeder or fancier can afford to be without, as it is just as suitable for the needs of the experienced fancier as for the amateur. Price \$1.00.

### Successful Poultry Culture

Contains 128 pages and is a practical treatise on everything you want to know about the poultry business. It tells you his method of saving three-fourths the feed bill, and many other valuable pointers which will save you many times the price of the book.

Space will not permit a detailed description of the entire book, but the following will give you an excellent idea as to its great value. Besides 30 illustrations of standard bred poultry and poultry houses, it contains chapters on the following subjects: The Way to Succeed; Some Interesting Poultry Statistics; The Pleasure of Poultry Culture; Advice to Beginners; Poultry and Pin-Money for Women; Boys and Poultry Culture; Poultry on the Farm; How to Succeed on a Small City Lot; How to Succeed with a Large Market Plant; How to Get Eggs in Winter; How to Feed Young Chickens; Success with Incubators; Success with Brooders; How to Cure Diseases; How to Build Poultry Houses; Plans for Model

Poultry Houses; Profits in Poultry Culture; Scientific Feeding. Regular price \$1.00.

### Diseases of Poultry

By D. E. Salmon, D. V. M., Chief of the United States Bureau of Animal Industry. Every poultryman should have this book in their poultry library. It contains 250 pages, and every disease to which fowls are subject is treated in a most thorough manner. The cause, symptoms and cure of each disease is put before the reader in such a manner as to be understood at a glance. With this book in hand you can be your own poultry doctor. Better order one now and not wait until your fowls become ill. Regular price 50 cents.

### "Why Poultry Pays and How to Make It Pay"

A book for the beginner in poultry raising and for those engaged in it who are interested in deriving from the business the greatest profit. The book tells you how to start right, how to succeed with poultry, how to line breed, how to win at the shows, how to breed and prepare fowls for market, how to feed for the production of eggs, contains a chapter on poultry diseases and simple remedies for same. Gives instructions on incubators and brooders, much other valuable information and is profusely illustrated with ideal drawings of standard fowls. Price 50c.

### "How to Build Poultry Houses"

A book devoted to the construction of poultry houses and fixtures gives plans and specifications for building all kinds of poultry houses, brood coops, nest boxes, dust boxes, shipping coops, etc. It will save money by telling just the kind of house desired for the different localities and the size best suited for the various sized flocks. Regular price 50c.

### American Poultry Journal Hand Book

Contains valuable recipes and trade secrets, feed, care and management in health and disease. Pocket size, 15 cents.

## Total \$5.15---Cut Price for the Eight Books, Prepaid, \$3.40

This is a saving to you of one-third from the regular price. Better order now before the price is advanced. If you want only a few of these books send in full price, as no reduction is allowed from the list price unless all eight books are ordered. You need all of them. You can also get any 50-cent book and a full year's subscription to American Poultry Journal for \$1.25, a 75-cent book and a full year's subscription to American Poultry Journal for \$1.40 or a \$1.00 book and a full year's subscription to American Poultry Journal for \$1.50.

**AMERICAN POULTRY JOURNAL PUB. CO.**  
542 SOUTH DEARBORN STREET, CHICAGO, ILLINOIS

# CLASSIFIED ADS

UNDER this heading ads will be inserted for seven cents per word each month for less than three months, and five cents per word each insertion for three months or longer. Changes in copy allowed every three months. Numbers and initials count as words. All ads will be inserted under classified headings. No ads accepted at less than an average of sixty cents per insertion. Terms, cash with each ad. Count the words carefully to avoid delay in publishing. Write your copy plainly, as upon this the correctness of your ad largely depends. When placing your ads remember that advertisers using Classified Ads get better returns from AMERICAN POULTRY JOURNAL than from any other poultry journal—none excepted. On writing any of these advertisers mention A. P. J. All copy for Classified Ads must reach us by the 17th of month preceding date of issue.

## LEGHORNS.

**BULLY GOOD WHITE LEGHORNS (S. C.).** One customer averaged 179 eggs each from 100 pullets in ten months. Eggs, March, \$6 per 100; then \$5. Circular free. George Phillips, Crawford Projection, Wakefield, N. Y. 3

**THE LARGEST S. C. White Leghorn plant** in Indiana. Every bird we own is from the same strain as our New York and Chicago prize winners. 100 cockerels, 200 pullets for sale, at astonishingly low prices. Singly, in trios, or in pens. We purchased our original stock from D. W. Young and The Dune Alpin Farm. Our birds are bred direct from these greatest of Leghorn breeds. And we get the prizes. Birds sent to responsible parties on approval. This is the greatest poultry bargain of the year. Don't pass it up. Eggs for hatching—we have twelve pens mated for the hatching season. Every bird is "frost-white." has splendid type, vigor, stamina and the egg laying habit bred in the bone. Orders booked now. Fifteen eggs to a setting. Eleven chicks guaranteed. Send for our circular. It's free. It describes all our pens. The Willows Farm, Oscar Luedke, Mgr., Lock Box 488, So. Bend, Ind. (References: The American Trust Co., South Bend, Ind.) 3

A strain of Laying and Exhibition Quality. Winners of 15 firsts, 3 seconds, 2 thirds and 25 specials at New Haven, Bridgeport, Waterbury, Middletown, Conn., and Springfield, Mass., latest shows. Eggs, \$2, \$3, \$4 and \$5 per 15. A guarantee of quality for the price cannot be beaten.

Edw. J. Young, 391 Pratt St., Meriden, Conn.

## 70 EGG INCUBATOR AND BROODER \$7.85

Both complete with all fixtures. Walls have three thicknesses—two thicknesses of lumber and one thickness of insulating material. Copper tank and heater, self regulating. Sold under guarantee which protects you. Order now or send for circular. We also make Rause's Perfection

Brooder. Ask us. Turrell's Incubator Works, Maywood, Ill.

## UNIVERSAL RAT EXTERMINATOR

One rat kills more chicks in a night than a hen hatches in three months. If you use our rat and mice exterminator and follow directions we guarantee it will rid your premises of rats in 48 hours. The success of this poison is the bait, more tempting than cheese—rats hunt for it. No odor from dead ones, the mixture embalms them. To introduce it we offer a 50c box for 25c till May 15th. Stamps taken. Agents Wanted. The Universal Co., Dept. A, Hinsdale, Ill.

## S. C. White Orpingtons Silver Campines

Big winnings on Orpingtons at Rockford and Duquaque shows. Eggs, \$5 to \$20 per 15. Utility eggs by the hundred. Imported pen of Campines. Limited number of eggs for sale.

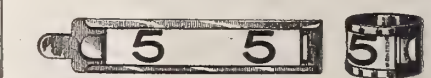

Elmer R. Dobler, R. 2 Warren, Ill.

## Agler's S. C. Reds

Five grand pens, forty-seven excellent breeders. Cup winners, also championship cockerel Toledo, past three years. Circular ready for you.

C. M. Agler, Box 7, Millbury, Ohio

## Bourne "Bignum" Poultry Band

Patent applied for.

Send two 1 cent parcel post stamps for samples and trial offer. Large numbers showing ten feet away. First to use numbers you can see. Best band out. Sizes for Bantams, Leghorns, Rocks and Reds. Black numbers from 1 to 100 on white, light blue, pink, green, yellow, cherry, and red celluloid. Withstands weather and water. State size, color and numbers wanted. Send cash with order. Price 3 cents each, \$2.50 a 100.

Bourne Manfg. Co., Box M, East Saugus, Mass.

**Avenarius Carbolineum** One application a year guaranteed to keep your coop free from lice. Write for circular and testimonials. Carbolineum Wood Preserving Co. Dept. 50, Milwaukee, Wis.

**COLBY S. C. REDS**

At Cleveland, January 20 to 27, 1913, I won 2 Cockerel, 1—2 Pen. Only made four entries. One of the hottest classes of Reds ever shown at Cleveland. Will have 8 pens mated for egg trade. Book egg orders early. Eggs, \$3, \$5 and \$10 per 15. Send for mating list.

E. W. COLBY -- R. F. D. No. 2 -- WILLOUGHBY, OHIO

**BIG LOUISVILLE WIN**

At the National show in competition with the "Originator" of all the Orpingtons we win 1, 2, 4 cock, 2, 4, 5 hen, 2, 3 cockerel, 3, 4 pullet, 1, 2 pen. Also Special for best display of Blacks, and Special for best display all varieties Orpingtons competing. From these birds and our Omaha, Indianapolis and Chicago winners this year we sell

**EGGS, \$10 FOR 15**

\$18 for 30, \$25 for 50. Baby chicks in any quantity. Our new catalogue and mating list should be in your hands if interested in Black Orpingtons. No better birds anywhere and the price is right. Order that catalogue now. It's Free.

**Blue Ribbon Poultry Farm, Box A, Columbus, Indiana**

**WEJA FARM S. C. W. LEGHORN WINNERS**

**At the Great Cleveland, Ohio, Show,  
January 6 to 11, 1913**

The Cleveland Poultry Breeders' Association. In a very strong class of 150 birds, we won 1st, 2d and 3d cock; 1st, 2d and 3d hen; 3d cockerel; 1st pullet; 1st and 2d pen; silver cup for best display. This together with our 1912 winnings prove beyond a doubt that our LEGHORNS are the best in the middle west. If you are in the market for stock either Exhibition or Utility let us quote you prices, we have over 2,000 birds to select from. We keep no other variety, therefore our whole time and attention is devoted to the betterment of the S. C. White Leghorn, the world's best EGG MACHINE. Having acquired all of the stock of D. D. Whitaker, Ashtabula, Ohio, also all the stock of Harmon Bradshaw, Lebanon, Indiana, as well as the stock of P. J. Thompson, Youngstown, Ohio; also the services of both Messrs. Whitaker and Bradshaw, we are prepared and have the STOCK to deliver the GOODS.

130 acres devoted EXCLUSIVELY to S. C. WHITE LEGHORNS. Exhibition Matings, \$5.00 to \$15.00 for 15 EGGS. Utility Matings: \$2.00, 15 EGGS; \$3.00, 30 EGGS; \$8.00, 100 EGGS. Baby Chicks, 15 cents and up. Mating list now ready. Send for free copy.

## HICKSON'S BARRED PLYMOUTH ROCKS

WIN AT THE NATIONAL CLUB SHOW --: CHARLOTTE, NORTH CAROLINA, 1913

The greatest record ever made at any Club Show was won by my birds January 10—14, 1913, at the Barred Rock Club annual meeting show in a sensational class of quality, the largest and best ever had in the South. I won Cocks, 1, 3; Hens, 1, 2, 3, 5; Cockerel, 1st; Pullets, 2, 4, 8; Pen, 2d; Pullet Bred Cockerel, 3d; Cockerel Bred hen, 1st, and more points than all others combined. My **First Prize Cockerel** also won Special for color, Special for best cockerel in the American class, and the **Sweepstake Special for best male bird in the show**. This line has been bred for nearly 20 years, and for years has won at the Virginia State Fair and other leading shows of the South, proving them of the richest quality and producing lines. Stock for sale. Eggs for hatching, \$5 per setting from my choicest matings. Circular free. Write me your wants. Absolute satisfaction assured. Mention American Poultry Journal.

## RHODE ISLAND WHITES

A NEW FAVORITE WITH A REASON

At Chicago, December, 1912, in the largest and best class of R. C. Rhode Island Whites ever seen in any show room, McCarthy's **Peerless Strain** made a clean sweep, winning 1st cock; 1st hen; 1st pullet; 1st pen; **\$25 cup for best display** and **\$15 cup for best shape R. I. White**. As every prominent breeder, both East and West, had his birds entered at this show, it proves beyond a doubt that the **Peerless Strain** is the **best in the world**. Send for our illustrated catalogue and mating list and become acquainted with this grand new breed.

CARL D. MCCARTHY : Box Y : KEMPTON, IND.

## THE 1912 REVISED EDITION OF THE AMERICAN STANDARD OF PERFECTION

The only American authority on the required characteristics of all breeds and varieties of chickens, ducks, turkeys and geese. You cannot raise, mate, exhibit or sell fowls intelligently without it.

This Great Book was revised this year (1912) and gives the correct Standard shape, color and weight of every recognized variety of chickens, ducks, turkeys and geese, as well as the disqualifications of each variety. The book contains 332 pages of descriptive matter and ideal illustrations of the different varieties of fowls, photographed from living models. Also

### Five Full-Page Illustrations of Feathers in Natural Colors

to guide the breeder in getting the correct color of plumage on his birds. No one can breed birds of any variety for exhibition without a copy of the **American Standard of Perfection** as a guide, and it is the only book of its kind published in this country. It is authorized, copyrighted and published by the American Poultry Association. Price postpaid, cloth, \$2; leather, \$2.50.

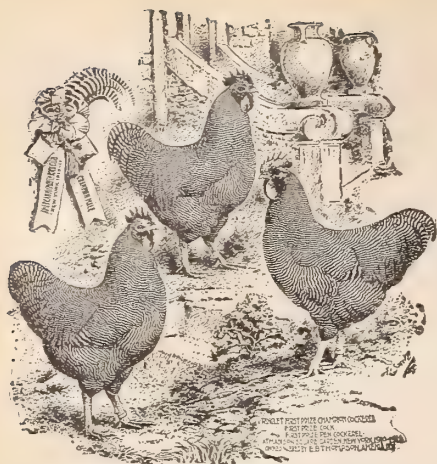

### OUR SPECIAL MONEY-SAVING OFFER

The Standard (cloth) and American Poultry Journal one year..... \$2.50

If you want leather binding add 50c to this price. Canadian subscribers add 25 cents per year for postage; foreign 50 cents

"Ringlet," 1st Prize and Champion Cockerel, 1st Prize Cock and 1st Prize Pen Cockerel at Madison Square Garden, New York, Winter 1910-1911.

The Three Greatest Living Barred Rock Males

# E. B. Thompson's Imperial "Ringlet" Barred Plymouth Rocks

Win the most wonderful record beyond all precedent in Barred Rock history at the imperial and most classic show of all America—Madison Square Garden, New York—this winter of 1913. See pages 520 and 521 for this unprecedented achievement unequalled in the annals of Madison Square Garden history.

My Imperial "Ringlets" won more first, regular and special prizes than any exhibitor of any breed.

To produce the first prize cockerel and champion male and first prize pullet and champion female in a single year, and win the two greatest prizes in the world at one New York Show has never before been accomplished by any living Barred Rock breeder.

A prominent eastern breeder said: "Mr. Thompson, I will give you \$1,000 for your first prize cockerel"—\$5,000 would not buy him.

Theodore Hewes, the judge and editor, said: "No Barred Rock breeder ever saw such a cockerel nor did they think any such a bird could ever be produced."

## My Whole Exhibit Wore the Distinctive "Ringlet" Barring

For 25 years at New York my "Ringlet" victories have been complete; my clean sweep of 1st, 2d, 3d, 4th and 5th prizes on pullets has never been approached in Madison Square Garden and stands alone and unequalled.

The Imperial "Ringlets" are the standard by which all other Barred Rocks are judged. To meet success in winning prizes you must have my birds and eggs.

I will sell you grand exhibition birds for any show and breeders of this richest first prize New York blood.

Richly illustrated 70-page catalogue upon request, it is full of original pictures of New York winners from life.

**Eggs** From the finest exhibition matings in all the world, \$10.00 per setting; four settings, \$35.00 one hundred eggs, \$60.00.

# A. C. HAWKINS' ROYAL BLUE BARRED ROCKS SWEEPSTAKES CHAMPIONS AT New York, Boston and Chicago

"ROYAL BLUE" First Prize Sweepstakes Champion Cockerel at New York.

They have produced the winners at the World's Greatest Shows for 25 years, and at the Great New York Show, 1911-1912, made a WORLD'S RECORD, winning six out of eight prizes awarded on Barred Rock Cockerels, including First Prize and Sweepstakes Silver Cup for Best Cockerel, and Grand Special Prize for Best Cockerel Mated Pen.

AT CHICAGO, Dec., 1912, in a class of over 400 Barred Rocks they won Four First Prizes and the GRAND SWEEPSTAKES CHAMPIONSHIP \$100.00 CUP for the Best Display of Barred Rocks. My White Rocks and Columbian Wyandottes have won more prizes at New York and Boston than any other strain and have no superiors.

2000 CHOICE EXHIBITION and BREEDING BIRDS for sale at honest prices. Finely illustrated Catalog of the World's Champions Free.

## CAMPINEOLOGY—Second Edition

"Story of the Living Egg Machines" and what it contains. CHAPTER NO. 1—Greeting a chapter that will set the poultry world thinking. CHAPTER NO. 2—History of the Campine fowl, ancient and modern. CHAPTER NO. 3—Description and characteristics of Campines in detail. CHAPTER NO. 4—The Campine fowl as I have found them, giving the reasons in full why I do after over twenty years of breeding and experimenting with many varieties recognized by the American Standard, now recommend and breed exclusively Campines and call them "Living Egg Machines." CHAPTER NO. 5—How to select and mate the Campine fowl. CHAPTER NO. 6—Tells you all about the IMPROVED CHAMPION STRAIN or in other words the original exhibition strain and the greatest utility fowl in the world. CHAPTER NO. 7—Prices of stock and eggs for hatching, also my way of doing business which guarantees entire satisfaction to every customer, and a number of bouquets that I have received during the past season. Now besides the above seven interesting chapters it contains two beautiful colored plates, each being a work of art, as well as a number of classy illustrations. Ten cents to pay postage will be appreciated.

## Harrison's Royal Red S.C. Reds

### Keep Winning

After winning the greatest number of points ever made at Chicago on special best display, December, 1912 (note the date), the total being 87, or, in other words, more than any other exhibitor ever won at this colossal show, AND WINNING IN EACH ONE OF THE SIX DIFFERENT CLASSES, A FEAT THAT HAS NEVER BEFORE BEEN ACCOMPLISHED BY ANY RED BREEDER, their winnings being numerated thus: 1st, 3d and 4th Cock; 2d and 3d Hen; 1st, 2d and 3d Pullet; 4th Cockerel; 1st and 2d Old Pen and 1st Young Pen. They go to Indianapolis AND MAKE THE GREATEST VICTORY EVER MADE ON R. I. REDS.

Royal Reds win 1st, 2d, 3d, 4th and 5th Cock; 1st, 2d, 3d and 4th Hen; 1st, 2d, 3d and 5th Cockerel; 1st, 2d, 3d, 4th and 5th Pullet; 1st, 2d, 3d, 4th and 5th Old Pen; 1st, 2d and 3d Young Pen and the ONE HUNDRED DOLLAR CHALLENGE CUP OFFERED BY THE ASSOCIATION FOR BEST DISPLAY.

ROYAL REDS won a total of 167 points on best display, while the combined amount of all competitors was but 11 points.

NOTE:—I recently made the purchase of 1st and 2d Chicago Cockerels from Mr. Ricksecker and now have in my yards every first prize winning male at Chicago, 1912.

My special inducement on eggs gives you an opportunity to secure them at less than half the price you have paid for this quality other years.

My free catalogue describes the best matings ever put together and explains the egg inducement. Free for the asking.

F. E. Harrison - Box 30 - Menominee, Michigan

## HITCH UP WITH "TECKTONIUS" AND HIS UNSURPASSABLE "BUFF LEGHORNS"

AND BE A "TOP NOTCHER" IN THE POULTRY BUSINESS

No such aggregation of "prize winning" and "prize laying" characteristics have ever before been embodied in any one breed—evolved by any one breeder—as in the

"Tecktonius" Strain of S. and R. C. Buff Leghorns

"One Swallow Don't Make a Summer"

Neither does a win, now and then at some minor show, make a "prize winning strain," as a winner is bound to show up occasionally in any poultry flock.

Tecktonius "Sweeps the Boards"—Anywhere—All the Time

But when "Tecktonius" and his world-renowned "Buff Leghorns" enter a show—or an egg laying contest—they clean the boards; not occasionally, but all the time; not in some of the minor shows, but at all the big shows—against all the big competitors. I challenge anyone to show an equally as brilliant record.

Seven Years Straight Winnings

These "clean sweeps" for seven consecutive years, in the big exhibition arenas—in competition with the world's best—shows "Tecktonius strain" of Buff Leghorns to be wonderful birds—shows Tecktonius to be a Master Breeder.

World's Best General-Purpose Fowl

A 252 egg record—combined with six years brilliant array of wins—indisputably stamps the "Tecktonius strain" of Single and Rose Comb Buff Leghorns as the world's greatest "general purpose" fowl.

"Tecktonius Strain" Make You a Winner

Incorporate the "Tecktonius Strain" in your flock and you, too, will get in the poultry business RIGHT—you will have birds that will put you in the front rank in all contests—exhibition and egg laying—and keep you there.

You'll Win Fame and Fortune Breeding Poultry with My Buff Leghorns

F. A. Tecktonius : Route 7 : Racine, Wisconsin

See Remarkable Offerings Below

## SINGLE COMB WHITE LEGHORNS ROSE AND SINGLE COMB REDS

We will take a limited number of orders for day old chicks and hatching eggs this season. Our strains are of the best blood of the country range raised, perfectly housed and fed and show the size, vigor and health that guarantee early and heavy egg production. Write us early for prices and information.

INGLESIDE FARMS : HOOPESTON, ILLINOIS

# The Wyandottes

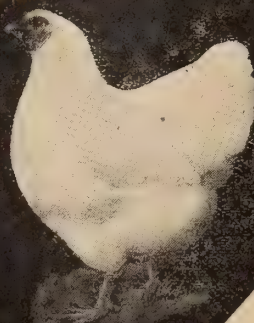

are acknowledged by all poultry authorities to be the greatest utility and fancy fowl.

What could be more beautiful than the White Wyandotte with its clear white plumage, red comb and face, and rich yellow legs? Snow white Wyandottes are bred for utility alone, others for exhibition purposes only, but

## The World's Best Strain

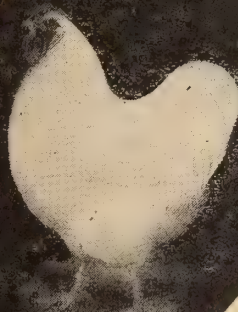

is bred to the highest degree of perfection for both exhibition and utility purposes. If you want birds that will breed exhibition birds we can supply you; if you want utility birds; heavy layers, write us.

If you need a cock or cockerel for breeding purpose we have them by the hundreds, females for breeding for fancy and utility purpose by the thousand.

## A Gold Mine of Information To Every Poultryman

HERE'S a book that paves the way to success in the poultry business.

It tells you all you should know about incubators and brooders.

Tells you what kind of foods to buy; the different remedies to use in time of need; the experiences of those who have "made good."

Book also gives valuable information to beginners and old-timers; pictures and describes the different kinds of Standard Bred Poultry; lays bare the secret of my success and knowledge gained through 25 years' experience as a poultry raiser and incubator manufacturer.

The reason why I send this Big Book FREE is because it also tells all about my

J. W. Miller,  
President

This book is not for curiosity-seekers, but for men and women who are interested in poultry for pleasure or for the profit there is in it.

Every year I try to do what I can to help others on the road to success. Last year I cut the price of my world-famous hatchers to the lowest price ever put on an efficient, dependable, sure-profit paying incubator. This year, I go still further and besides selling my incubators for less money than ever sold before.

## I Pay the Freight and Give You An Un- qualified Guarantee

This unusual offer is not on an incubator made up for the purpose, but is quoted on the regular sizes of the Ideal Incubators and Brooders, same as those thousands of poultrymen have obtained 95%, 98% and 100% perfect hatches from.

If you are seriously thinking about spending your good money for an incubator, look into the merits of my "Ideal."

My "Ideal" is built with a heating and ventilating system that automatically regulates moisture. It has a hot water system that's perfect, a regulator that will not allow temperature to vary one-half a degree, the best nursery advantages, the handiest egg tray, the record for successful hatching, etc.

Written  
By the  
"Man  
Who  
Knows"

## IDEAL INCUBATORS and BROODERS

When writing for my Big Poultry Book, tell me whether you are interested in a 60, 120, 175, 240 or 360-egg incubator and I'll quote you my special low-price, freight prepaid introductory offer which includes everything. There are no extras to buy. You get the Ideal Incubator complete, ready for your eggs, so you can make big profits from the start.

Eggs for Hatching

C. A. Keefer, (Edgemere Farm), AR 5, Muskegon, Michigan

### ORPINGTONS

At the great Grand Rapids, Mich., Show, I won on Whites, 2d, 3d and 4th cocks; 1st cockerel; 1st pullet; 4th hen; 1st pen; special best exhibit in English class. On Buffs, 1st cock; 1st cockerel; 1st and 2d hen; 2d pen; special best display. At Kalamazoo, Mich., Dec. 1912, on Whites, 1st and 2d cocks; 2d and 3d cockerels; 1st and 2d pullets; 1st pen; sweepstakes for best cock, cockerel, hen, pullet and pen; sweepstakes best pen in show. All of the above prize winners are now in my breeding pens and will reproduce themselves.

Also some choice birds for sale. Catalogue and price list free.

C. A. Keefer, (Edgemere Farm), AR 5, Muskegon, Michigan

## SPRING WATER'S FAMOUS S. C. W. LEGHORNS

WE HAVE NO OTHER BREEDS

### Day-Old Chicks Eggs for Hatching

No strain can excel "Spring Waters" for vitality and the necessary qualities to produce prize winners. At the recent Baltimore show we won 2 firsts, 2 seconds, 1 fifth and 1 eighth. Our First Prize Pullet being the sensation of the show.

### Our Prices Will Please You Our Treatment Must Satisfy You

What we guarantee: That chicks will be hatched from eggs laid by our breeders only; the safe arrival of our chicks; the fertility of our eggs, and that you must be satisfied if dealing with us. Our capacity is 20,000 eggs at one sitting. We have a few choice **Breeding Cockerels** to dispose of. Write for free illustrated booklet. Write us before placing your order for this season's wants.

Spring Water Poultry Farm : Stockton, N. J.

## THE ZERO SAFETY LAMP

Is the Wise Man's choice. Are you satisfied with that old and dangerous lamp? You certainly must realize the importance of having a dependable and safe heating plant in your incubator and brooder.

### The Zero Safety Lamp is SAFE, CLEAN and RELIABLE

Safe because our special construction prevents heat of burner from reaching oil tank. Clean because the combustion is even and lamp does not smoke or become sooty. Reliable because the burner is the best of its class and being cooled by the ascending column of air does not cause wick to "draw" and raise the flame. Keeps egg chamber at uniform temperature.

From any of our dealers or by mail for \$1.25, postpaid. The **SANITARY CHICK FOUNTAIN** is the most sensible made. No chance for the chicks to get wet or drown. Easily cleaned and filled. Holds one quart and goes into any brooder. Price is 25 cents, or by mail for 35 cents, and once you use it you will never get along without it.

The **ATSATT'S CHICK FEEDER** is the neatest device ever invented for feeding young chicks. They cannot get into it or stand on it. Gives them clean food and insures their health. Top removes for cleaning and filling. Just right for your brooder (10 in. long, 4 in. wide). Price 25c or by mail 35c. Ask your dealer for our goods. If he will not supply you send direct to us and we will see that you get what you order. Our catalogue for the asking.

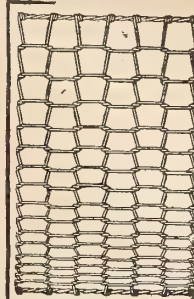

**ATSATT BROS.**

## Makes 'Em Turn up Their Toes Mighty Quick

Why waste time and money experimenting with ordinary lice remedies when you can be absolutely sure of best results by using

### The Old Reliable

lice killer that has been the standard for 30 years. Others have come and gone, but Lambert's is still the leader—unequalled—unapproached.

### LAMBERT'S Death To Lice

will clean out all lice pests—"makes 'em turn up their toes mighty quick". Fine for sitters, layers, exhibition stock. Does not injure hens, eggs, chicks, or soil plumage. Sold in 10c, 25c, 50c and \$1.00 sizes. If your dealer hasn't it, we'll see you are supplied. Send 2c stamp for Lambert's latest copy "POCKET BOOK OF POINTERS" a valuable book for poultry raisers. (3)

O. K. Stock Food Co., 501 Traders Bldg., Chicago

## GERMOZONE

### GEO. H. LEE'S STATEMENT

"I invented Germozone 15 years ago because I had to have it. I was losing a third of my chicks and chickens every year. Its results have been phenomenal. Sales rose from \$1.00 or \$2.00 a month in 1897 to \$8000 a month in 1912. It cures Roup, Colds, Canker, Swelled Head, Cholera, Bowel Complaint and Chicken Pox 99 times out of 100. In the odd case we refund money."

Regular price at dealers or postpaid, 50c. Sample by mail, 6c. Be sure to try it this year.

### LEE POULTRY SUPPLIES

including the famous Egg Maker, Lice Killer and White Diarrhoea Remedy are standard everywhere. All good dealers handle them. Ask for them. Lee's line of books on Poultry Supplies and Incubators sent direct, free. Write for them.

**GEO. H. LEE CO.**  
1101 Harney St.,  
Omaha, Neb.

all other makes combined.

Candee Incubator & Brooder Co.

DEPT. 2, EASTWOOD, N. Y.

# Ferris Improved White Leghorn

## Eggs and Chicks at Reduced Prices

### NOW is the Time

to hatch White Leghorns if you want eggs next winter. April and May chicks from our bred-to-lay stock will mature in October and lay all winter when eggs are high. Ferris Leghorns have been bred to lay for more than 12 years. By the use of trap nests and careful attention to every detail that can affect the health and vigor and egg producing qualities of the birds we have developed a strain of White Leghorns that will lay over 14 dozen eggs a year and that will lay a large number of eggs in fall and winter regardless of weather conditions.

### Our Guarantee on Eggs

We endeavor to protect our customers and want you to be perfectly satisfied. When you do not get satisfactory results tell us and we will do everything possible to make it right. *We Replace all Infertile Eggs Free of Charge.* It is well to be careful that you do not get eggs from late hatched stock that is not mature, for eggs from immature Leghorns are as worthless as eggs from any other breed. If you want eggs from yearling hens we can furnish them, for *over half the birds in our breeding pens are yearling hens.*

#### Can Ship Anywhere

We can ship eggs safely anywhere in the United States, Canada or Mexico, and will guarantee fertility. We ship no eggs more than three or four days old, and nearly all eggs are shipped the next day after they are laid, for during the regular hatching season we usually have orders booked a week or more ahead and we make shipments every day.

#### Day Old Chicks

It is usually better and cheaper to start with chicks than with eggs, because chicks cost only twice as much as eggs and the average hatch from eggs is only about 60%, except in the hands of poultrymen who have had considerable experience and know just how to get the best results. The saving in express charges is also worth considering, as the charges on 100 chicks will be only one-third as much as on the number of eggs required to hatch that many chicks. We can generally ship chicks as promptly as eggs, so there is a difference of three weeks in favor of the chicks—three weeks difference in the time the pullets will begin to lay.

Our loss in shipping has averaged less than 2% during the past four years, and our customers have had good success raising the chicks, which proves that the stock is hardy and vigorous and that the chicks have not been injured in the least by shipping. In fact, it is much safer to order chicks than eggs because chicks are nearly always handled more carefully than eggs.

Our incubator capacity of 25,000 eggs enables us to ship promptly orders of any size.

#### Bred-to-lay Utility Matings

All our twelve years' efforts to increase egg production are in the breeding of these birds, and although they do not score high enough to make breeders of exhibition stock, they will give you stock that can not be surpassed for laying purposes by any other that can be bought *excepting our bred-to-lay exhibition matings and our trap-nested laying pens.*

The difference in egg production between these utility matings and the other matings is very slight; the only difference is that although these birds are bred from the trapnested pens, they are not themselves trapnested.

However, we allow no birds in these pens that are not good breeders. The eggs are big, selected for even shape and color and will produce strong hardy chicks.

We can furnish eggs and chicks in any quantity and the price of eggs will be \$10 per 100 or \$90 per 1000 during April, and \$8 per 100 or \$76 per 1000 during May. Settings of 15 eggs, April \$1.95 and May \$1.75.

Day old chicks, April \$24 per 100 or \$216 per 1000; May \$20 per 100 or \$180 per 1000. In lots of 25, April \$7, May \$6.

#### Trapnested Laying Pens

All of these birds score 92½ or more, for this is the minimum score that we permit in these pens, and most of them score more. The average score is around 93½ and scores of 94 to 95 are not at all uncommon. They are mated to males from the best pens, none scoring less than 93 and they will produce a uniformly good looking flock of heavy layers.

Every bird in these pens is a good winter layer for we discard all that do not reach an average of 14 eggs per month during the winter months when eggs are scarce and high. Ferris Leghorns have a reputation of being the best winter layers of any fowl and we are bound to maintain that record.

If you want trapnested bred-to-lay stock that also is bred reasonably close to standard, you will make no mistake to take this grade. For the average county fair and small winter shows, these birds will be pretty sure to be among the winners and they are the best layers that have ever been produced.

The prices of eggs and chicks from these pens are just double the price of the utility matings—\$20.00 per 100 for eggs in April and \$16.00 in May. Chicks \$48.00 in April and \$40.00 in May.

#### Summer Sale of Stock Starts May 1st

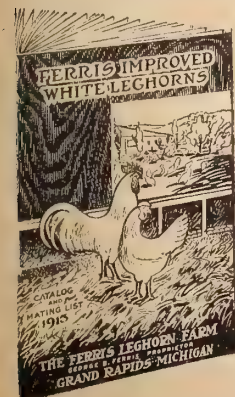

To make room for the ten thousand chicks we will raise this spring we offer thousands of cocks, cockerels, pullets and hens bred from our exhibition matings and our trapnested laying pens and can give you splendid values in any grade you want. Write for prices and full particulars. Let us tell you about the large vigorous breeders we have that will give you just the right foundation for heavy egg production and also the carefully mated exhibition birds that will and produce winners for any show. Remember that our guarantee is the broadest ever given by any breeder. We ship on approval, insure the birds for thirty days and guaranteed absolute satisfaction.

Stock purchased now will give you chicks that will lay next winter, and you will get the best values that have ever been offered at the prices we can quote you.

## Get Your Copy of this 132-page Catalog --- FREE

Have you had a copy of our new 132-page catalog? If not, send us your name today and get your copy by return mail. It not only gives prices and a complete description of our stock but we have also tried to make it as helpful as possible to every breeder of White Leghorns by giving the methods of feeding, housing and breeding White Leghorns that we have found best by twelve years' experience. Remember that the book is absolutely free and that your name on a postal is all that is necessary. Send for it now, while you have this ad before you.

## No Guess Work With a "Tycos"

It does the essential thing with perfect correctness—it registers the temperature in the egg chamber just as it is. A "Tycos" Incubator Thermometer makes no mistakes; it is always accurate. You have to break a "Tycos" to destroy its accuracy. It is "aged" and tested before sold. That is why every "Tycos" is dependable. Send for Free Booklet, "Incubator Facts". "Tycos" Incubator Thermometers, each \$.75. Incubator Hygrometers, each \$1.50.

Taylor Instrument Companies Rochester N. Y.

## Lice Kill Chicks

Nothing retards the growth of chickens more than lice. They irritate and suck the lifeblood from young fowl, mar their growth and impair their usefulness at maturity.

Lice can be effectively checked by the application of Instant Louse Killer to the chicks, setting nests and roosts and in the dust bath.

## INSTANT Louse Killer

is quick and sure in its action. It destroys all poultry parasites. Instant Louse Killer kills bugs on cucumber, squash and melon vines, slugs on rose bushes, cabbage worms, etc. Also kills lice on horses, cattle, ticks on sheep.

Instant Louse Killer in big sifting-top cans. Be sure you see the word "Instant" on the can before you buy.

Sold under a written guarantee.

1 lb. 25 cts.; 3 lbs. 60 cts.

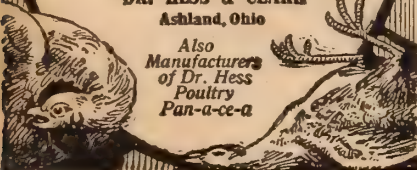

Except in Canada and extreme West.

If your dealer cannot supply you, we will forward 1 lb. by mail or express, prepaid, for 35c.

## All Incubators

Enable the poultryman to extend his operations.

Reduce the labor of hatching as compared with hens.

Give the poultryman control of the hatching season.

Remove the chicks from the hen's vermin and disease germs.

## All Mammoth Incubators

Still further decrease the labor of hatching.

Remove the danger of fire from kerosene lamps.

Reduce the fuel cost to a small fraction of the former figure.

Permit the adding of further hatching capacity to a single incubator.

Increase the hatching efficiency by eliminating kerosene fumes and drying air currents common in lamp incubators.

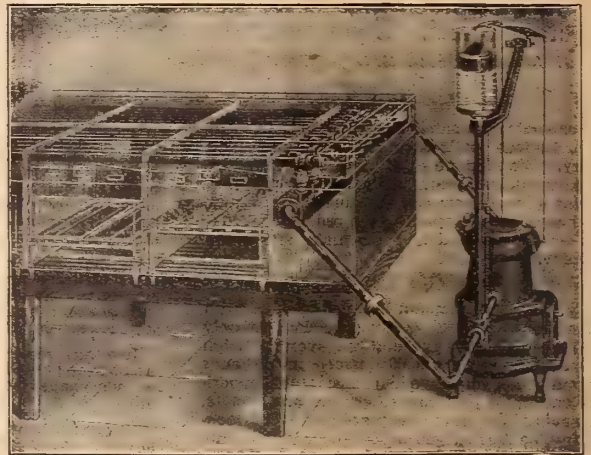

Tend to concentrate the hatching of chicks in the hands of those who make a business of it upon a sufficiently large scale to afford the best equipment known.

## The Hall Mammoth Incubator

Has compartments holding 150 eggs each.

Has the safest and most convenient tray lifting device.

Does not rely on thermostats to take care of the development of animal heat.

Has slatted bottom, providing ample ventilation without drafts as does the curtain front poultry house.

Is the original Mammoth Incubator, and being first in the field, had opportunity to pick out and patent the best and simplest way to control each condition of incubation, leaving imitators to infringe patents or adopt substitute methods and proclaim them as improvements.

Has the largest list of began-little-and-grew-big customers; here are a few of them:

	Original capacity		Present capacity
Peerless Farms, Northport, L. I.	3,000	-	15,000
Wayne Poultry Farm, Stony Point, N. Y.	6,000	-	21,000
Mt. Pleasant Farms, Mt. Pocono, Pa.	6,000	-	24,000
Kerr Chickery, Frenchtown, N. J.	6,000	-	31,200
Laurelton Farms, Lakewood, N. J.	15,000	-	48,000
Michigan Poultry Farms, Lansing, Mich.	12,000	-	60,000
Geo. M. Woods, Leman Place, Pa.	12,000	-	81,600

In the New Hall Catalog are letters and photos from these and many other plants that have grown. Send for it today.

## Now Ready New 1913 Prairie State State Poultry BOOK Bigger and Better

Every one interested in chickens—amateur or expert—wants and needs this valuable book. Poultry experts say it is by far the best book published. It is brimful of good, practical information, gleaned from actual experience of the most successful poultrymen. Over 120 pages and 75 of them bristling with such live topics as the following:

**Poultry Possibilities on the Ordinary Farm**

Which is the Best Breed?  
The Intensive or Extensive Plan  
How to Feed Laying, Growing Stock  
What System Shall Poultrymen Use?  
Fattening—Feeding Little Chicks  
How to Keep Poultry Free from Lice  
Feed Formulae and Many Useful Interesting Topics

Colony House Methods  
Care of Brooders  
Selection of an Incubator  
Poultry Buildings  
Principles of Feeding  
Growing Green Ducks

## Send Your Name on Postal—It's Free

Do it today. Be among the first of the thousands who will ask for this valuable book—so you won't have to wait for your copy. You'll be surprised at what you get. An illustrated book crowded with money-making and money-saving methods, hints and pointers which you will be happy to know. State experiment stations, Corning of N.J., and dozens of the best poultrymen in the world endorse this book, and tell how success is sure with

I have paid dollars for poultry books not half so valuable. I never came across anything like it before.  
E. H. Ransdell,  
Witt, Ill.

## Prairie State Incubators and Brooders

which are built according to the very best ideas in practical, scientific incubation. Practical use proves they hatch the most and best "livable chicks." The book is free if you send now. Do it today.

Prairie State Incubator Co., 468 Main Street, Homer City, Pa.

## Helps Solve the Hired- Girl Question

Old Dutch Cleanser keeps the hired girl satisfied and makes the work far easier and pleasanter for the housewife when "help" is not obtainable. For it takes half the drudgery out of cleaning cooking utensils, kitchen cutlery, churns, milk pails and pans and half the rubbing out of scrubbing. The hardest things clean easiest with Old Dutch Cleanser.

Many Uses and Full  
Directions on Large  
Sifter Can—10c.

## The Hall Coal Heated Colony Brooder

If you want range raised chicks you cannot afford not to use Hall Colony Brooder.

### Chicks Are Healthier

With the coal heated brooder there are no fires, no chilled chicks, no kerosene fumes. Greater indoor comfort and cleanliness and range afield result in chicks of superior vitality.

### Three-Fourths of the Expense and Labor is Saved

Coal is a far cheaper fuel than kerosene and the Hall Brooder Heater requires less attention than a kerosene lamp. When you care for one Hall Heater you are attending to from three to four hundred chicks. A like saving is experienced in feeding, watering and cleaning.

Professor Rice of Cornell says: "The most expensive factor in rearing chicks is the labor required to handle the larger number of brooders when the chicks are kept in small flocks."

### Loss from Moving Chicks Eliminated

When the chicks are old enough the brooder is removed and the chicks remain in the house until mature, avoiding both labor and the serious setback to chick growth that results when they are removed to strange quarters.

Write at once for our Catalog and prepare yourself to raise more and better chicks with less expense and labor.

### THE HALL MAMMOTH INCUBATOR COMPANY

136 SOUTHERN AVENUE.

LITTLE FALLS, N. Y.

Three Hundred Chick Hall Colony Brooder with hover raised by counter-weight. Note ease of access for cleaning.

## Agler's S. C. Reds

Five grand pens, forty-seven grand breeders Cup winners, also championship cockerel Toledo the past three years. Eggs \$3.00 per 15. Send for circular.

C. M. Agler, Box 7, Millbury, Ohio

## ANCONAS, SILVER CAMPINES, BUTTERCUPS AND BREAKELS

Most beautiful of them all. Business and beauty combined. Eggs for hatching. Best winter layers.

E. O. Green : Portland, Indiana

## X-RAY Incubator

WRITE me a letter or postal today for my new Free book on X-Ray Incubators and Brooders.

J. H. Kate, Pres.

Let me tell you the reasons why you should insist upon this money-saving hatcher. I ship direct to you, cut out all go-between profits, guarantee to please you and give you the finest incubator in the world.

I put the lamp of the X-Ray incubator underneath, where it should be—and not on the side! This means a perfect distribution of heat—perfectly even temperature over the egg chamber at all times—perfect ventilation—no heat waste whatever and no cold side. I make my oil tank much larger than those used on the old style machines. My tank holds from 7 to 8 quarts of oil—but 4 quarts is all that is needed for a hatch—so the X-Ray

### Uses Only 1 Gallon of Oil for Entire Hatch—Requires But 1 Filling of the Lamp

Therefore I positively guarantee to save you 75c to \$1.25 on every hatch—and you'll get bigger, stronger, healthier chicks than ever before! To buy my X-Ray means less egg handling, less oil, less heat generated, absolutely no waste, no refilling of lamp during hatch—and a mighty nice saving of money!

If you are going to buy an incubator or brooder get the best!—get the one that shows the most profitable results with the least work, worry and oil expense. My free book No. 10 will be mailed Free to you at once. Write for it.

From Factory Direct to You, No Agents—No Dealers—Guaranteed to Please. FREIGHT PREPAID

X-Ray Brooders, too

THE MOST POPULAR FOWL today is U. R. Fishel's White Ply. Rocks

**COLBY S. C. REDS**

At Cleveland, January 20 to 27, 1913, I won 2 Cockerel, 1—2 Pen. Only made four entries. One of the hottest classes of Reds ever shown at Cleveland. Will have 8 pens mated for egg trade. Book egg orders early. Eggs, \$3, \$5 and \$10 per 15. Send for mating list.

E. W. COLBY -- R. F. D. No. 2 -- WILLOUGHBY, OHIO

## CAMPINES

IMPROVED GOLDENS AND SILVERS—Yards headed by our great Crystal Palace Cock together with our big winnings at Cleveland under Drevendst in one of the strongest classes of the year, places our stud one of the foremost in America. Our first Silver Cockerel was pronounced by experts to be one of the greatest birds shown in this country, the first Golden pen was the sensation of the show. Ten ribbons on twelve entries. Get our egg prices, it may pay you to do so.

GENSEMER BROS.

161 MAIN STREET

CRESTON, OHIO

## ORPINGTON FOWLS AND DUCKS

Winner at Grand Central Palace

Winners at Madison Square and Grand Central Palace, N. Y. My birds are all descendants from prize winners, and my recent "victories" at these two most prominent shows in America should convince you that I have "quality" that will please you. A few special bargains in trios and pens at this time.

ON 11 BIRDS SHOWN AT THE PALACE 10 WERE IN THE MONEY

ON 14 BIRDS SHOWN AT THE GARDEN 7 WERE IN THE MONEY

These prize winners are all in my yards and are mated for the egg trade. Plenty of grand pens to select from. Superb matings, \$5.00 to \$15.00 per 15. Excellent quality for the price.

### Buff Orpington Ducks

Madison Square winners. I won 1st pen, 2d young drake, 2d young duck and 3d pen Grand Central Palace. I have as fine a flock of these most wonderful layers and money makers as can be found anywhere. Having a flowing stream insures my duck eggs being fertile. Duck eggs only \$3 to \$5 per 11. Write for prices on Baby Chicks. Catalog and mating list free.

F. B. CRAWFORD BOX 115-A RAHWAY, NEW JERSEY

## The Kind of a Hatcher Lincoln Would Have Made

ABRAHAM LINCOLN struck the keynote of the Old Trusty Incubator people, when he said, "you can't fool all the people all the time."

The Johnsons have never built a cheap incubator. Yet they could build one cheaper than anyone else if they wanted to. They have the largest factory, the largest output—buy materials in largest quantities, sell direct from factory, and save in many other ways that are not possible to other manufacturers.

### Johnson's Old Trusty

is made of red wood—not composition board or any cheap wood. The Johnsons use a copper tank instead of a galvanized one. Their incubator is full size—not skimped. They use a firm egg tray, not a light, skimpy one. They use a guaranteed thermometer, though others cost less. They use a lamp burner that gives the most heat for given amount of oil. They ship their Old Trusty all set up complete, except the legs—not knocked down for you to put together.

Yes, the Johnsons could make a cheap incubator and sell it for about \$6.48 and still make a profit. But "you can't fool all the people all the time." The Johnson's price is less than \$10, and those who want a real hatcher will pay that price for the "kind of an incubator Lincoln would have made"—honest all the way through.

### 30 to 90 Days Trial—10 Year Guarantee—Price less than \$10

Over 400,000 Old Trusty Incubators have been sold. They are making big money for owners in all parts of the world, in every climate, under all sorts of conditions. Could anything but the best incubator make such a universal success? Don't you want to know the reasons why so many Old Trusties have been sold? Wouldn't you like to join the big Old Trusty family of successful chicken raisers? Send a postal now for the Johnson's 1913 book. It's free—address

JOHNSON, The Incubator Man,

Clay Center, Neb.

Less Than \$10

Freight Prepaid East of the Rockies

Featherless Mother of a Billion Chicks

### 1913 Book FREE

Home written home made, home printed by the Johnsons themselves. It contains the facts and experiences gained by 17 years experience in the incubator and poultry business, and the knowledge gained by the experience of 400,000 Old Trusty owners. Full of real helps—no theories, no fanciful stories—nothing except straight-from-the-shoulder facts.

Everybody waits for Johnsons' new books. Your copy is ready. Mail a postal for it NOW

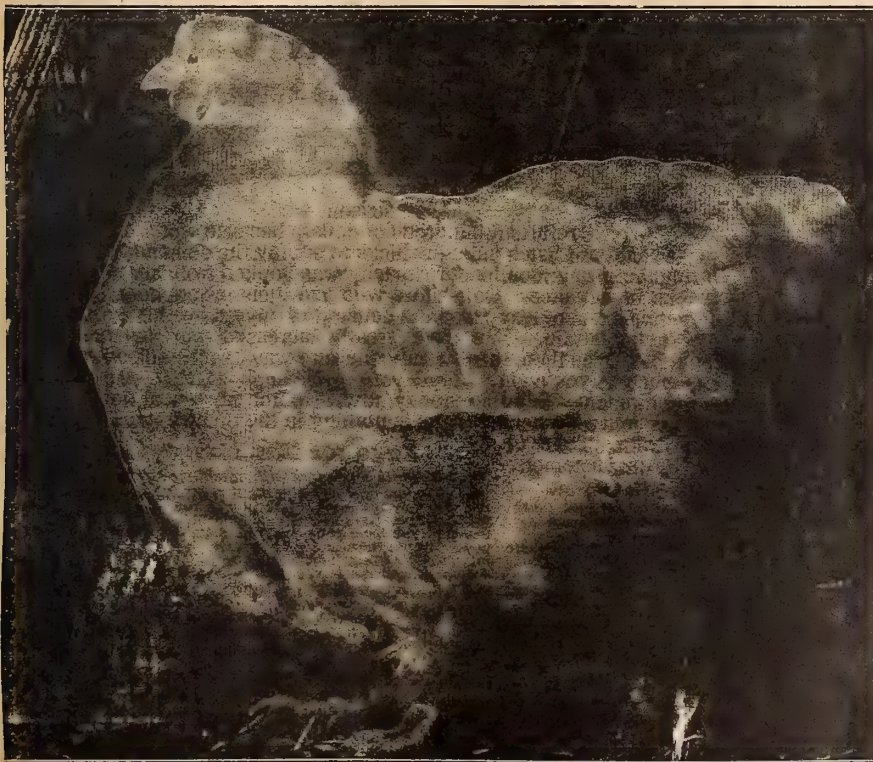

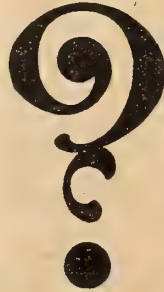

### The Johnsons Have 400,000 Customers

The Johnsons might have sold 10,000 poor incubators—or 20,000 fairly good incubators—but they never could have sold nearly half a million if the quality wasn't highest. Don't you think you can make money with the incubator that 400,000 others have made money with? Send for the Old Trusty book. A postal will do.

FARM, BRIDGETON, MISSOURI.

SECOND PRIZE COCKEREL BOSTON 1911.

## 150,000 Day-old Chicks

are all we can supply this season

Last season we returned hundreds of dollars because we could not hatch enough chicks to supply the demand. During the spring months our capacity was booked from six to eight weeks in advance. Only those who had their orders booked ahead could get chicks, so heavy was the demand of buyers for this early-maturing, heavy-laying strain. We have greatly increased our hatching facilities this season, but, even then, there is only one sure way to get stock when you want it and as much as you want **Book your order now—FREE.** Make sure of getting your shipment. Send no money now. Do not pay a cent until just before the date of your shipment. There is nothing in the poultry world equalling Pittsfield Strain. Think of these records made by our customers:

**Pullet lays first egg at 96 days**  
**Ten hens lay 2497 eggs in one year**  
These records are unapproached except by Pittsfield birds.

We make shipments anywhere and guarantee safe arrival. Remember, we can hatch only 150 000 chicks this year, so get in your order at once.

### 8-weeks-old Chicks

A new and highly successful plan to get high-quality stock. Introduced by us last season. Has all the advantages of day-old chicks, and in addition saves brooding losses and losses from accidents, bad weather, rats, hawks, as well as mistakes in handling. Can ship all pullets, or in any proportion, as desired.

### "Money-Making Poultry"

Get this great, free, helpful poultry book. New edition, new illustrations, new facts, along with the old truths. Explains our feeding system and tells you how to adapt our simple methods to your own profits. If you want the latest word in poultry handling, you should certainly have this book—not like most poultry books.

### \$225 in Prizes to be Given Away

Our great "First Eggs" contest, to see how early Pittsfield Pullets will lay for our customers, is under way. Send for details. Write us about your needs—Day-old Chicks, Hatching Eggs, 8-weeks-old Chicks. Utility and Exhibition stock. Quality always high. Prices reasonable.

**PITTSFIELD POULTRY FARM CO.**  
102 Main St., Pittsfield, Maine

**Eggs for Hatching**  
We invariably fill orders with hatching eggs laid the same day that shipment is made. We ship any distance—frequently to the Pacific Coast. Safe delivery guaranteed. See that you have your order booked now. We use the utmost care in picking, insuring fresh, hatchable conditions, as well as safety.

Eggs from our special pens of Prize Winners can be had. Our Pittsfield Birds won more prizes at Boston this year than any other Barred Rocks.

## ANCONAS!

Wohler's Garden Strain—Farm raised; free range. Blue ribbons and medals at Madison Square, Philadelphia, Baltimore and Camden. For a two-cent stamp you can have a copy of my catalogue with illustrations of Winners, not as they OUGHT to be, nor as we would LIKE to have them, but just as they are. You will learn by this the kind that win. They are not perfect, but as nearly so as Anconas have been produced to date. Ten pictures.

A. E. WOHLERT, Route 8, Narberth, Pa.

## A Man Who TRIES Can Make Money Growing Berries

Two years ago a man bought a five-acre place—and paid \$150 an acre for it. His wife planted berries and flowers. Her husband helped her when he had time.

Last fall they sold this place for \$650 an acre, making \$2500 cash profit in two years. The berries and flowers made the increase in value.

This ought to give you the idea and the courage to buy or rent and plant somewhere. You can make a good living from berries on five acres, but a back yard is big enough for quite a planting.

Get the 1913 Berrydale Berry Book. The one publication of its kind. It will give you facts and ideas so you may plant profitably. It describes Lacatava, the brand new hardy Blackberry with the largest berries known, Giant Himalaya Berry and others. The book is free—write today.

## IN ONE YEAR ON A TOWN LOT

is the title of a new book that we have just completed, and is the amount of money actually made in one year by H. Cecil Sheppard of Berea, Ohio, with his chickens, and he tells in a very comprehensive way just how he did it. Anyone can do the same thing if they pursue the same method as Mr. Sheppard did.

This book is printed on high-class enamel paper, is profusely illustrated, contains nearly 100 pages of reading matter; bound in cloth, and divided into nine chapters, as follows:

CHAPTER I—THE ROAD TO SUCCESS.....	11
Practical information—Selecting the breed—Start on small scale—Pigeons—Buy good stock to start with—At the poultry shows—Advertising pays well—Importance of advertising—Doubled my capacity each year—Selecting the variety—My actual experience step by step—Living on a town lot—A little paradise in five years.	
CHAPTER II—INCUBATORS AND BROODERS.....	19
Placing the eggs in the incubator—Importance of cooling the eggs—Running the incubator the right temperature—Keep the brooder clean—Preparing the brooder for the chicks.	
CHAPTER III—CARE OF CHICKS.....	23
Don't chill the young chicks—Right temperature the third and fourth weeks—Feeding the young chicks—Green food necessary for young chicks—Charcoal and grit important—Sprouted oats a great egg producer—Perfect winter quarters—Automatic feeders for growing stock—Don't force the breeders.	
CHAPTER IV—POULTRY HOUSES.....	31
Open air houses most satisfactory—Birds singing in zero weather—The ideal chicken park—The necessity of cleanliness—My first eggs four months—Imported the best stock obtainable—How I commenced advertising—My first order for hatching eggs—Chickens laying all fall and winter—Increasing advertising increases business—Good results at end of year.	
CHAPTER V—PLEASURE AND PROFIT.....	33
Sales \$9,515.00 sixth year—Gives up everything for chickens—A square deal for everybody—Building up a good character—The science of salesmanship—The four stages of salesmanship—Good stationery and catalog important—Found it necessary to move to a farm.	
CHAPTER VI—WHAT TO DO EACH MONTH OF THE YEAR.....	45
Care of young stock—Houses thoroughly cleaned and sprayed—Orders and shipments—How to ship the birds—Birds need extra care in November—Getting the birds ready for the show room.	
CHAPTER VII—MATING STOCK.....	51
The male is half the breeding pen—Catalog and mating list—shipment of eggs and baby chicks—How to ship baby chicks—A colony house from a piano box—June end of hatching season—The pleasant smile.	
CHAPTER VIII—THE AMERICAN QUEEN.....	59
Good time to get interested in poultry—Possibilities of the hen—Poultry business offers grand opportunities.	
CHAPTER IX—ORIGIN OF ANCONAS.....	63
Color of the Ancona—Shape—Habits—The fancier's fowl—As a utility fowl.	

The price of this book is \$1.00, but in order to give our subscribers an opportunity to secure a copy, we make the following offer:

\$4,223.00 In One Year On a Town Lot and one year's subscription to American Poultry Journal for only **\$1.50**

(Canadian subscribers add 25 cents per year and foreign 50 cents per year for postage)

## SHOEMAKER'S POULTRY BOOK

**AND ALMANAC.**  
There is nothing in the world like it. It contains over 200 large pages, with many fine illustrations. A number of BEAUTIFUL COLORED PLATES OF FOWLS—showing them in their natural color. Tells all about all kinds of thoroughbred chickens, with life-like illustrations. Prices of eggs for hatching and fowls for breeding purposes. TELLS HOW TO RAISE POULTRY SUCCESSFULLY, their care and management and how to treat all diseases common among them. Gives illustrations and descriptions of convenient poultry houses, and plans to build them.

### ALL ABOUT "GLOBE" INCUBATORS & BROODERS

with fine illustrations, complete description, and lowest prices. ALL ABOUT OPERATING THE INCUBATOR. This chapter is marvelously complete, and worth much more than the price we ask for the whole book. This Poultry Book is worth dollars to anyone interested in the raising of fowls. IT IS AN ENCYCLOPEDIA OF CHICK-EN-DO, and no one can well afford to be without it. Will be mailed to anyone upon receipt of only 15c. Money refunded if not pleased.

C. C. SHOEMAKER, Box 605, Freeport, Ill.

## Columbian Wyandottes Silver Campines

Grand Columbian Matings from our Cleveland and Columbus winners. Our Silver Campines are the direct product of England's most noted winners, and American bred. We guarantee Good Hatchable Eggs.

C. L. PATTERSON (FREE CIRCULARS) BARBERTON, OHIO

## LOYD'S PRIZE WINNING PARTRIDGE PLY. ROCKS

### ARE STILL WINNING

At Indianapolis, Feb. 3-7, 1913, we won as follows on twelve entries—Cock 1-2-5; Hen 2-4-5; Cockerel 1-3; Pullet 1-3-4. 11 prizes on 12 birds. No pen shown. At Cleveland, Jan. 20-25, 1913, Cock 1-3-5; Hen 2-4-5; Cockerel 2-5; Pullet; 2-4 First Pen and special for best display. Send for 1913 mating list, and start right with the right breed.

C. J. Loyd & Son—Greensburg, Indiana

## Ideal-Hover

### NEAT—HANDY—SAFE—DURABLE

Just set on the floor anywhere, light the lamp and in 20 minutes you have as good a chick Mother as money can buy. Pick it up and carry any place with lamp burning. HEATER: Our Duplex or Double Drum hot air Heater will produce 15 per cent more heat from the same amount of oil than any single drum Heater used in others. The Des Moines Seed Co., Des Moines, Iowa wrote us that the Ideal heat up the best of any Hover they had ever experimented with. LAMP: Our lamp will never cause trouble by smoking. Oil cannot become overheated as oil fount is on outside of Lampbox feeding oil to wick just as needed and just enough to keep it covered all the time. Lamp flame always in plain view. Lamp removed or pushed in place with one hand. The Ideal is 24 inches in Diameter, all metal but Double Curtain, has no Hot Center, and will brood 100 chicks. GUARANTEE: We will refund money if not entirely satisfactory. SPECIAL NOTICE: On account of Galvanized Iron and other products used in its Mfg., advancing in price, we have put the price to \$6.00 freight paid on two or more East of Rockies; \$7 freight paid on 3 or more west of Rockies. It is still from \$1 to \$2.50 cheaper than others, and the price will never be changed again, unless something extraordinary happens. Upon receipt of \$1 we will ship by Express C. O. D. to be examined. Freight allowed on two or more. Don't buy another Hover until you see our illustrated Circular; we can interest you. Don't fail to mention this paper.

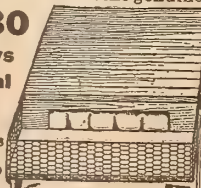

DUPLEX INCUBATOR CO.,  
TREMONT CITY, OHIO.

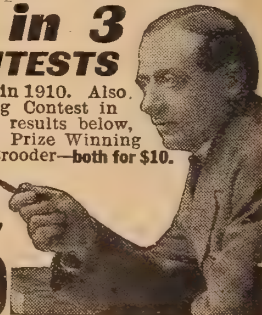

## Wisconsin Victorious in 3 BIG Hatching CONTESTS

Winner in Mo. Valley Farmer Contest in 1910. Also a winner in the Successful Farming Contest in 1911 and 1912. Read the record of results below, then bear in mind you can get this Prize Winning Incubator and the genuine Wisconsin Brooder—both for \$10.

**BOTH For Only \$10**

### WHY PAY MORE?

I stand ready to prove to you there are no better machines on the market for anything like my low price. I stand ready to let you prove it in your own home—to your own satisfaction (not mine), and pay the freight charges both ways. You take no risk—no chances. I will ship you one of my 125 Egg Hot Water Wisconsin Incubators and a 125 Chick Brooder on 30 days trial, and if you don't find it the best hatching outfit after 30 days trial, ship it back, and back comes your money. Machines that win in the Big Hatching Contests year after year, surely must have unusual merit. But remember, they must win your satisfaction or I take them back—return your money—pay all freight cost. Here's my offer.

### 125 Egg Wisconsin Incubator Chick Wisconsin Brooder Both Freight Prepaid \$10.00

Mrs. Jerry McMahon, Veederburg, Ind., won in the 1910 Mo. Valley Farmer Hatching Contest, hatching 125 chicks from 125 eggs with her Wisconsin Incubator.

Mr. C. B. Armitage, Atwater, Ohio, hatched 88 chicks from 88 eggs and 93 chicks from 93 eggs in the 1911 Successful Farming Hatching Contest, making two 100 per cent hatches.

Mrs. J. W. Mize, Vaughns Mill, Ky., won in the 1912 Successful Farming Hatching Contest, hatching 105 chicks from 105 fertile eggs.

Can you equal such records—certainly they can't be beaten. Where can you buy such hatching efficiency for the money? The reason is because Wisconsin has double walls, dead air spaces, double glass doors, copper tanks and boiler, nursery, Tyco's Thermometers, are self-regulating, well made of California Redwood, natural finish, complete—set up ready to use. Brooders equally well constructed, hover, safety oil lamp, wire yards—both the best in every way. Order a pair on my liberal 30 day trial—5 year guarantee and be convinced. Or write for catalog. The publishers of this paper vouch for my responsibility.

**WISCONSIN INCUBATOR CO.,**

T. J. COLLIER, Mgr.,  
Box 50, RACINE, WIS.

**EGG PRODUCERS**—If you want eggs buy Fishel's White Ply. Rocks  
**R. C. CALDWELL** Ships Baby Chicks of Quality  
 on short notice. See ad on page 653

## WALDEN'S BARRED ROCKS

Philadelphia, New York and Baltimore winners. I can please you with quality and price. Quality is my aim, with satisfaction assured. Choice breeding stock at right prices. If you want quality that will improve your flock I can supply it. Write me your wants.

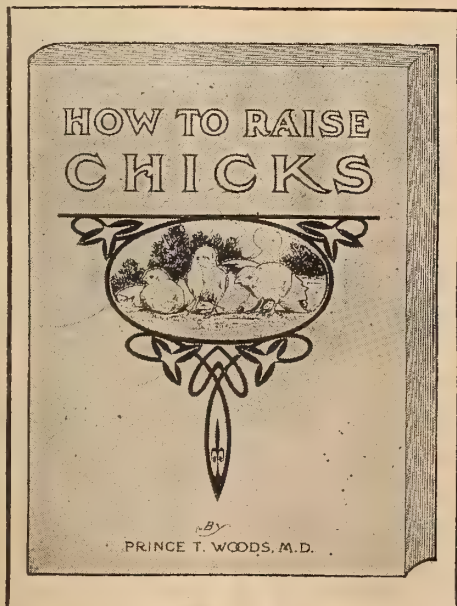

**R. J. WALDEN** :- **Box A** :- **MIDDLEBURG, MD.**

## BABY CHICKS

From strictly free range stock hatched by the latest improved scientific methods, backed by years of experience with incubators, from the following varieties: S. C. White Leghorns, Buff Leghorns, S. C. Anconas, White Plymouth Rocks, Barred Rocks, White Orpingtons, Black Orpingtons, Black Minorcas, S. C. R. I. Reds, White Wyandottes. Remember we have the largest equipped poultry plant in the middle west. Can supply chicks in any quantities guaranteeing safe arrival. Send stamp for catalogue describing how we feed and raise thousands of chicks. All orders booked in rotation.

**Miami Poultry Yards, Jas. C. Cummins, Mgr., R. 2, Trenton, Ohio**

## DR. PRINCE T. WOODS' NEW BOOK How to Raise Chicks

### INCLUDING REVISION OF "FACTS ABOUT WHITE DIARRHOEA"

A down-to-date manual on breeding poultry, getting hatchable eggs, incubation and brooding both natural and artificial, preparing chick foods, feeding chicks, how to raise chicks and how to avoid and prevent disease and losses. Told in plain language. Illustrated with reproductions from photographs and pen drawings. Tells how to make your own brooders and chick foods. Written by a man who knows how and how to teach others. 88 pages, 35 illustrations and 5½x8 inches in size. Printed on good paper. Well and durably bound in cloth.

**A Book for Everybody Who Keeps Fowls or Grow Chickens  
Whether Beginner or Old Timer in the Field of Poultry Work**

It has ten chapters: Chapter I—Selecting and Mating Breeding Stock. Chapter II—Food, Vegetable, Animal and Mineral. Chapter III—Fowls and Food. Chapter IV—Care and Management of Breeders. Chapter V—Eggs for Hatching. Chapter VI—Incubation, Natural and Artificial. Chapter VII—Brooding with Hens and with Brooders. Chapter VIII—Chick Foods and Feeding Chicks. Chapter IX—Growing Chicks. Chapter X—Facts About White Diarrhoea. What white diarrhoea is. Symptoms of disease. Causes. Is there more than one form? Has germ of specific disease been found? Infection. Prevention. Treatment. Formula for a simple remedy which has proved effective in many cases in many climates for four years.

Here is a book devoted to chick comfort and to more and better chicks, 75 cents per copy postpaid. Learn to save your chicks; that means more profit; Dr. Woods tells how; send for the book now, only 75 cents, cloth bound.

75c per copy, postpaid; with American Poultry Journal, one year, only \$1.40. Canadian subscribers add 25c for postage, foreign 50c.

American Poultry Journal, 542 South Dearborn St., Chicago, Illinois

# The Best Methods

**R**EADER, the *Brooding* and *Feeding* Season is right before you *now*! Upon the care you take of your chicks in the *next few weeks* depends very largely the net Poultry Dollars you will make in 1913.

The Big Poultry Profits are made on breeders, layers and prime market fowls, *reared right and well developed*.

Good hatching is only *half* the battle. The question that should interest you most just now is *what to do when the chicks arrive*—how to house them, keep them plump and strong—how to prevent losses that may cut into your flock and make your successful hatching *count for nothing*, except work and worry.

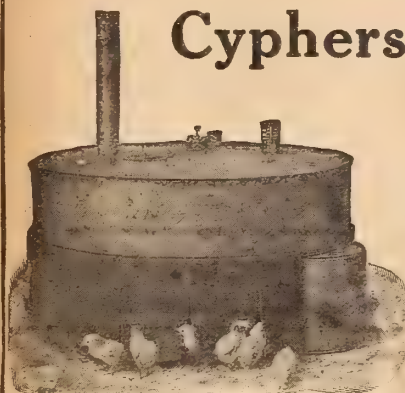

Let us "mark" these questions "*personal*": How Are *You* Going to Brood Your Chicks? What Are *You* Going to Feed Them? Have *YOU* decided to Use Right, Safe, Proved Methods All the Way to *SUCCESS*?

You simply *cannot postpone* giving these *vital* matters your immediate, thoughtful attention, provided you want to be in the Big Profits Class this year.

The Cyphers Company Brand and *Trade-mark* means the World's Standard in *everything* for Practical Poultry Keepers—*without exception* "the best article for the purpose."

Sixteen years of experience and *continued success* have proved

## Cyphers Company's Methods Right for Money-Making Poultry Raising

**Cyphers Portable Hover**

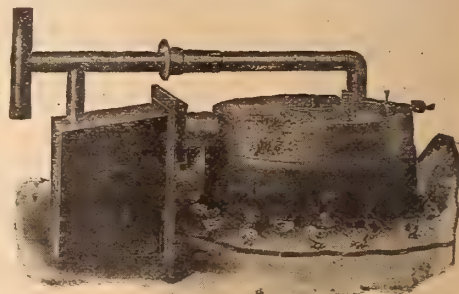

Set it down Anywhere Indoors, or in a Colony House or Roosting Coop and You Will have a Safe and Comfortable Place for the Little Chicks. "Movable" on a Moment's Notice without even Turning Down the Lamp Flame. Is Self-Regulating, Self-Ventilating, All-Metal and Practically Indestructible.

Adopt and *follow* Cyphers Company's Methods. They will guide you right—will help you not only in *producing* big, strong, healthy chicks, but in bringing your poultry into *market at best prices*.

Thousands of successful poultry raisers and egg producers, both men and women, use Cyphers Company's goods *exclusively*—and with *gratifying results*. Cyphers Incubators, Cyphers Brooding Equipment, Cyphers Foods, Cyphers Standard Supplies, for all *practical purposes*—and why not you, Reader?

Time and opportunity *now* are too precious to risk on experiments! *Action*—quick, intelligent action is your *insurance of safety—of results*.

Write *today* for helpful *free* books described on opposite page. *Then act!*

**Cyphers Adaptable Hover**

Fire-Proof, Insurable, Self-Regulating and Self-Ventilating. Used In Full Line of Cyphers Indoor and Outdoor Brooders. Best Device for Home-Made Brooders.

## Sample Reports From Customers

### "Coldest Month South Has Had"

Charlotte, N. C., July 5, 1912.

Cyphers Incubator Co., Buffalo, N. Y.—

This spring I purchased one of your Self-regulating and Self-ventilating Adaptable Hovers, and it has been highly satisfactory in every respect. I ran it outdoors in a home-made brooder box as early as February, which this season was the coldest month the South has had in a good many years, but I had no trouble in keeping up the required heat in the Adaptable Hover to properly care for the comfort of the little chicks entrusted to its care. We raised every chick from this February hatch.

FRANK A. POTTS.

### "Have Eight of Your Brooders"

Moodus, Conn., June 5, 1912.

Cyphers Incubator Co., Buffalo, N. Y.—

Am always ready and willing to speak a good word for the Cyphers Company products and for the "Cyphers Service." We attribute considerable of our success, especially in the earlier days, to the fact that we "started right" with the Cyphers way of doing things. Last year I had the "fireless craze" and tried an early lot of chicks on the fireless plan. On the third day, after losing one-third of them, I put the chicks in one of your Style B Outdoor Brooders and had no further trouble. No more fireless for me for early hatches when I can get your brooders to do the job. I have eight of your Brooders in operation.

C. A. RUSSELL.

### "Don't See How Could Be Improved"

Argos, Ind., July 1, 1912.

Cyphers Incubator Co., Buffalo, N. Y.—

The Cyphers Style B Outdoor Brooder, equipped with Adaptable Hover, has proved entirely satisfactory, and is the best brooding device of which I know. I don't see how your Adaptable Hover could be improved. Out of 85 chicks placed in the brooder we raised 80 of them, and the loss of the five was through no fault of the brooder. We also reared our chicks on your Cyphers Chick Food, with good results. Have found it to be sweet and sound, and free from dirt or waste materials. The chicks eat it up clean. All our dealings with your Company have been entirely satisfactory.

ED. M. MARTIN.

### "20 Degrees Below Zero—Did Not Lose a Chick"

Brown Station, N. Y., June 15, 1912.

Cyphers Incubator Co., Buffalo, N. Y.—

Am using one of your Style A Outdoor Brooders, and also a Style B Outdoor Brooder, additional to the Adaptable Hover which I have installed in a home-made brooder. I have operated these brooders in February, when weather went 20 degrees below zero, and I did not lose a single chick. Am enclosing herewith photograph showing two cockerels hatched February 16th, that tipped the scales at 5½ pounds each. They came out strong and healthy. They were fed on Cyphers Chick and Developing Foods, which accounts for the rapid and satisfactory growth, and development of the birds. I want nothing but Cyphers Incubators, Brooders and Poultry Foods for me.

F. A. DEMGAR.

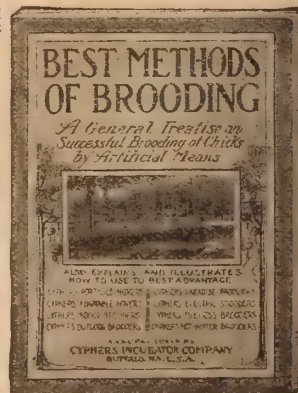

**Cyphers Style B Outdoor Brooder**

World's Most Popular "Foster Mother" (Patent Heating System)

Cyphers Style B Outdoor Brooder, Colony-Type, Three-Compartment, Self-Regulating and Self-Ventilating. Part of Front is Cut Away in Picture to Show Partition Between Hover Chamber and Exercising Apartment.

June 20th. I consider that pretty good. These birds were hatched in my 244-egg capacity Stan'ard Cyphers Incubators and like the rest of my chicks, they came out strong and healthy. They were fed on Cyphers Chick and Developing Foods, which accounts for the rapid and satisfactory growth, and development of the birds. I want nothing but Cyphers Incubators, Brooders and Poultry Foods for me.

Cyphers Company's Latest New Free Book. Most Complete Treatise to Date on This Vitally Important Subject. Goes Into Every Detail From Time Chicks are Taken From Incubator Till They are Placed on Range. Book of 52 Pages, 7x10 Inches in Size, Well Illustrated. Mailed FREE on Request to Any Address.

# Give Best Results!

**DON'T DUPLICATE WORK!** That's a Success Secret in any business. Don't do over again what someone else has already done for you. In brief, don't invest your time and money in needless experiments in poultry raising, when the Cyphers Company already has blazed the trail—proved the way to surest and greatest success.

For this very purpose our Company owns and operates a \$75,000 Experiment and Demonstration Poultry Farm. Results are recorded; most modern, most successful methods are proved and passed along to Cyphers owners, through Cyphers Company's Free Bulletin and As-Often-As-You-Need-It Personal-Letter Service.

Cyphers Company's Methods are established and successful; they enable you to cut out all need for wasteful experimenting; they enable you to avoid losses; to go straight ahead surely, safely, with the best results. Our own proved success, combined with that of many thousands of customers, IS YOURS when you adopt Cyphers Company's Methods and use

Write today for the three Great Free Books published by the Cyphers Company for distribution to every man and woman who is interested in poultry raising and egg production. Have you received your set? If not, write us today—right now, and we will send all three, postpaid, without obligation.

### Poultry Foods and Feeding

52 pages—fully illustrated. A gold mine of practical, helpful information covering all details of feeding for special results.

### Best Methods of Brooding

Cyphers Company's latest free book—of direct value and timely help to every poultry grower. All Brooding Facts from start to finish. Successful care of chicks made easy. 52 pages, fully illustrated.

### "Profitable Poultry and Egg Production"

Cyphers Company's big 1913 Year Book—244 pages—packed with richly valuable information on every branch of poultry raising. 8 special chapters of proved Money-making Methods—vital, down-to-date poultry facts and suggestions.

Write us today for any one or all three of these great free poultry books.

### Sample Reports From Customers

#### "Free From Waste Materials"

Edwardsville Ill., August 16, 1912.

Cyphers Incubator Co., Buffalo, N. Y.—

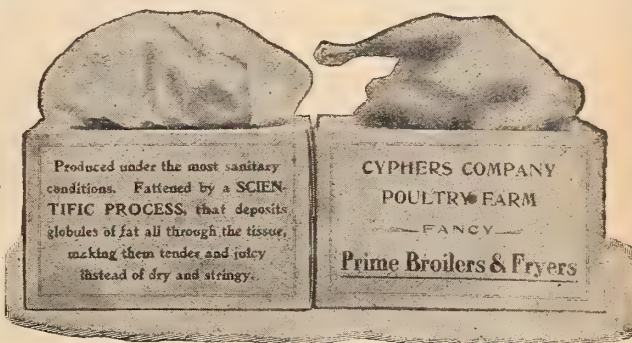

Your Balanced-Ration Granulated Chick Food has been used by us with entire satisfaction. In every purchase it has been clean, sweet, and free from waste materials that the birds will not eat. I have found that everything bearing your trade-mark will serve the purpose for which it was intended. Every hatch brought off from your incubators has averaged 90 per cent., or better, and we have hatched more than 2,000 chicks which were successfully reared with your Cyphers Brooders and your Cyphers Foods. Yours truly, MENY-EGGS FARMS, John Henry Lynch, Proprietor.

#### "Have Given the Best Results"

Mt. Clemens, Mich., September 30, 1912.

Cyphers Incubator Co., Buffalo, N. Y.—

I have tried all kinds of poultry foods, but the Cyphers Sealed-Bag Brand Balanced-Ration dry grain mixtures have given me the best results. I have tried your Chick Food, Developing Food, Scratching Food, Meat Scrap, Oyster Shells, Grit, Charcoal, and also supplies such as Water Fountains, Food Hoppers, etc. Each year I raise from 600 to 1,000 fowls. At our recent poultry show I won first, second, third pullet, second cockerel and second pen on White Wyandottes. All of these were hatched in Cyphers Incubators and raised on Cyphers Foods. BUHL HART.

### Command Top Market Prices

Picture Made From Photograph of Prime-Quality Table Poultry Produced Season of 1912 on Cyphers Company's \$75,000 Experimental and Demonstration Poultry Farm, Buffalo, N. Y.—Also Cardboard Boxes In Which Broilers and Fryers are Marketed. Every Detail of our Methods Will be Found Described In FREE Booklet, "Poultry Foods and Feeding."

#### "Consider Cyphers Foods Almost Ideal"

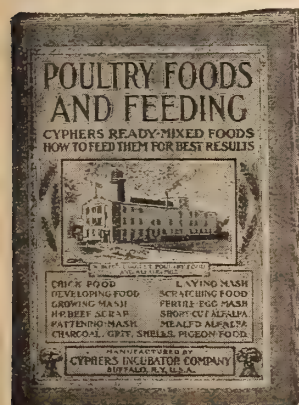

Atlanta, Ga., August 26, 1912.

Cyphers Incubator Co., Buffalo, N. Y.— We are well pleased with your Cyphers Balanced-Ration Foods. We find that to produce a pullet which will lay 180 to 200 eggs per year, it is necessary to start the chick just right, to see that there is continuous healthy development every day, and that when the pullet has reached maturity she receives such a balanced ration as will result in the greatest possible egg production. After our experience we consider Cyphers Poultry Foods almost ideal. Yours Truly, WYANOKE FARMS, W. E. Taliaferro, Prop. Bred-to-Lay S. C. White Leghorns.

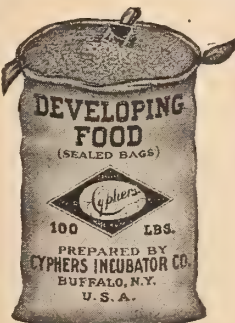

#### "Raise Them To 3 Pounds, Without Losing a Chick"

Romulus, N. Y., September 5, 1912.

Cyphers Incubator Co., Buffalo, N. Y.— This season I have experimented with different foods and feeding systems in caring for my young chicks. I find that those fed exclusively on Cyphers Chick and Developing Foods made much more rapid growth, had more even feathering and was able to raise them up to three pounds in weight—often without losing a chick. I have always found your Sealed-Bag Brand Balanced Ration Poultry Foods to be free from dirt and waste materials, and the chicks eat them with a relish, cleaning up the grains to the last particle. CHAS. E. REED.

This Book Would be Cheap at \$5.00 per Copy, Judged by Actual, Detailed Value of Contents. Tells How To Produce Broilers, Fryers, Roasting Chickens and Capons; Also Exactly How to Feed the Layers and Breeders. 52 Pages, 7x10 Inches. One FREE COPY on Request to Any Address.

### Cyphers Company's Developing Food

This is a Medium-Granulated, Five-Grain Balanced Ration that we Advise our Customers to Feed to Growing Chicks Between the Ages of Six to Twelve Weeks, Before They are Given Whole Grain.

## Breeding and Exhibition Stock Baby Chicks and Eggs

Buff and White Orpingtons    White Wyandottes  
S. C. and R. C. R. I. Reds    White Leghorns  
Buff Leghorns    Indian Runner Ducks

At eight of the leading shows of the United States we have won

## 260 PRIZES

For the breeding season of 1913 we have mated up 35 pens of grand quality, and in addition individual and colony pens aggregating nearly 1,000 splendid breeders. Over 2,500 birds were available for selection, a number amply sufficient to insure the highest of quality.

At LaGrangeville, N. Y., we have our 160-acre farm which is admirably adapted for a great poultry producing plant. At Bryn Mawr Park, Yonkers, N. Y., is our metropolitan branch plant where we have several of our choicest breeding pens of each variety, and also have on hand and for sale stock the finest quality. Bryn Mawr Park station is only ten miles from N. Y. City.

All our stock has been raised on free range, which with us means fields, woods and orchards.

## Special Prices on Fine Breeding Stock

Cocks, \$5.00 and up; Hens, \$3.50 and up; Cockerels, \$5.00 and up; Pullets, \$3.50 and up. Prices on exhibition stock quoted on request.

The chick crop of 1912 was much below the average, consequently the demand for baby chicks, eggs and stock is unusually large this season. We therefore recommend early placing of orders. By ordering now and making a small deposit customers may insure for themselves shipment on date selected by them.

All our baby chicks are hatched in Hall Mammoth Hot Water Incubators and are equal in every respect to hen hatched chicks.

Catalog, with prices of eggs, baby chicks and stock, now ready. Send for copy.

Eggs \$5.50 per 30      Eggs \$15.00 per 100  
Prize Matings \$4.00 per 15 Straight

**TWENTY** Grand Pens for 1913. No utility matings. Twenty selected pens, containing our winning birds at the big Shows and State Fairs at which we have exhibited.

**SEND** us your order for what eggs you need. We are specialists in Barred Rocks, have bred them in line for 22 years and have been consistent winners, at the great Central and Mid-West Shows.

**RAISE** your breeders and prize winners from "Pope Strains." They are the height of perfection in the new type, the correct type, the Pope type of clear black and white barring. No other breeder can give you the quality that we can, and we ask all those expecting to purchase Barred Rock eggs to send for our 40-page Catalogue and Mating List. You will make a great mistake if you place order before getting our literature. Send for Catalogue No. 3

Louis B. Schram, 60 Hamilton Avenue, Brooklyn, N. Y.

# URBAN FARM CHAMPIONS

We will spare a limited number of settings from our prize winning Black Langshans, White Rocks, S. C. Mottled Anconas, Silver and Golden Campines, Black Tailed Japanese Bantams at Boston Show, 1913. Three varieties shown, our entries won eight firsts, four seconds, two thirds, one fourth, two fifths. Of 34 birds shown, 29 were under the ribbons. Mating list for 1913 on application. Correspondents please write their name and address plainly.

URBAN FARMS, PINE RIDGE, BUFFALO, N. Y.

# "NO KILL—NO PAY"

One application of Licene will Kill every louse and 'nits' on your hens and Keep them free from lice for six months.

**INDORSED BY LEADING POULTRYMEN.**

Read what Mr. John S. Martin, the noted White Wyandotte breeder, says of Licene.

Gentlemen—I have given your Licene a through trial and I find it is all you have claimed. It is sure death too lice and no mistake. I will want more of it as soon as my supply runs out. Yours sincerely, JOHN S. MARTIN, Port Dover, Ontario, Canada.

Price 50 cents (enough for 200 birds) postpaid. Sample Free. We will refund your money if you are not satisfied.

THE LICENE CO. .: PONTIAC BUILDING .: CHICAGO, ILLINOIS

# BLACK LANGSHANS & INDIAN RUNNER DUCKS

Brookfield Farm birds are Maryland's beauty and quality strain. They have been winning regularly at Baltimore, Allentown, Hanover, Hagerstown, etc., and have proven their worth as well for practical purposes.

**Black Langshans**—Have won first cockerel at Hagerstown two years. My 1912 champion was pronounced one of the best ever shown. Shape, size and sound color are features. For all purposes there is no better bird bred. They are hardy and great layers. Eggs from my best pens \$5 per 15—Utility \$2 per 15.

**Indian Runner Ducks**—Have made a sweeping record with these in the best of classes. My drake "Edward" has an unbeaten record at six great shows. Let me know your wants in either of above for exhibition or choice breeding quality. Pairs, trios and pens properly mated. Eggs from my best pens \$5 per 11. Utility \$2. Selected breeding cockerels a specialty. Satisfaction assured. Prices right. Mention American Poultry Journal when writing. Address

Mrs. F. Littlefield, Box A, Middleburg, Maryland

## Barred Plymouth Rocks

The "Hoosier Strain" Barred Plymouth Rocks scored another sweeping victory at the Big Cincinnati, Ohio, show Jan. 23-29, 1913, winning best display, five silver cups, gold special for champion male, etc. We had twice as many points for best display as any competitor. This phenomenal winning added to our record of first cock at Chicago, Dec., 1911, second and third cocks and fifth pullet mated pen Chicago, Dec., 1912, five first and four second prizes at Indianapolis in 1912, is final proof that there is no better strain. **Eggs for Hatching:** Our pens are the best we ever mated and contain more National Show winners than the same number of pens owned by any other breeder in America and will produce the winners for next season's big shows. Prices for Eggs, \$1.50, \$5 and \$10 for 15. A few choice breeding birds for sale. Send for mating list.

## WHO HAS THE BEST WHITE ROCKS?

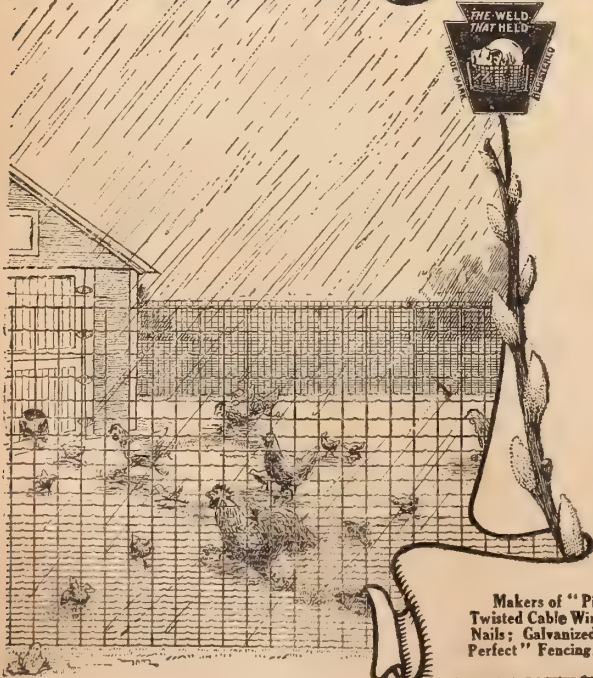

Write today for special bargain mating list and sheet of winnings, which are sent free. Also send 10 cents for illustrated catalogue, which will tell you all about

### Halbach's Stay-White Strain White Plymouth Rocks

They won more than 68 other prominent breeders at such shows as the National White Rock Club Show, Chicago, Milwaukee (Fair), and Detroit. This record is far in advance of any other. It should assist you in purchasing your eggs and stock for new blood and foundation stock as well. Remember they hold the world's record by winning BEST DISPLAY at CHICAGO four times. A grand lot of breeders left. The kind that will produce you winners. Utility birds in quantity. The quick growing, heavy laying, big paying kind. Eggs from the best matings, \$15.00 per 15. Utility eggs, \$10.00 per 100. Just write today and be convinced of quality. Have anything you need and know that I can more than please you.

**H. W. Halbach, Box A, Waterford, Wisconsin**

## "Pittsburgh Perfect" Fences

When that April shower suddenly descends, if your chickens are properly confined to their run, they are not so far away from cover that the rain can do damage to even the smallest chicks.

The new "Pittsburgh Perfect" Chicken and Rabbit Fence keeps them just where you want them, and **effectually** bars out all prowling, destructive animals and vermin. Strung around your orchard, the rabbits can't get at the trees. Cheaper than fine-meshed hexagonal poultry netting and outlasts it many times. It is the very best investment in poultry yard equipment you can make.

The joints in all "Pittsburgh Perfect" Fences are **WELDED BY ELECTRICITY**

No wasted wire, no useless, dragging weight. Made of heavily zinc-galvanized Open Hearth Wire. Easiest to put up. Look best. Unequaled in strength, durability, economical cost.

Dealers everywhere sell "Pittsburgh Perfect," made in different styles for FIELD, FARM, RANCH, LAWN, CHICKEN, POULTRY and RABBIT YARD and GARDEN.

Write today for new catalogue telling how to test wire and erect fence.

**PITTSBURGH STEEL CO., Pittsburgh, Pa.**

Makers of "Pittsburgh Perfect" Brands of Barbed Wire; Bright, Annealed and Galvanized Wire; Twisted Cable Wire; Hard Spring Coil Wire; Fence Staples; Poultry Netting Staples; Regular Wire Nails; Galvanized Wire Nails; Large Head Roofing Nails; Single Loop Bale Ties; "Pittsburgh Perfect" Fencing.

Special, best 10 birds in whole show twice in succession. Free Catalogue

**A. J. Fell, Box J, West Point, Pa.**

## If I Buy Baby Chicks Will They Mature Into Pullets Like These?

Will they grow into birds that I can feel proud of and that will lay Winter eggs in quantities, or win the blue ribbons for me, or will they be just scrubs that's the question before everyone who buys day-old chicks. It is not the first price that counts, but will they be right at maturity?

### Caldwell's White Plymouth Rock (Fishel Strain) "Baby Chicks of Quality"

#### From Utility Matings

Will mature into long backed, well made birds pure white in color, that will be the secret of "Winter eggs." Every utility breeder is descended from known good layers that have been bred that way.

#### From Exhibition Matings

Will mature into blue ribbon winners. Every exhibition pen is made up of birds with good combs, of good type and chalk white in color, possessing the rich blood lines of generations of Fishel blue ribbon winners. Our birds were among the principal winners at the Indiana Fanciers' Show, Indianapolis, 1912.

#### A New Catalog Is Now Ready

One of the finest ever issued by any breeder. It tells just how "Baby Chicks of Quality" are produced and describes every grade of stock that we have to sell with prices. A copy is ready for you.

#### The Caldwell Selling Plan

Not only arranges for the man who orders in advance, but for the one in a hurry. Thousands of eggs are setting which will make possible

Delivery of any number on short notice.

**R. C. Caldwell : Box 1021 : Lyndon, Ross County, Ohio**

## FISHER'S BUFF ORPINGTONS

Are known America over, winning at all the prominent shows, including Madison Square Garden, Chicago, Cleveland, etc. Mention A. P. J. when writing. C. E. Fisher, Box 391, McConnellsville, O.

Big Black Figures on White Background.

All colors, all sizes, for all fowls, and pigeons. Birds identified without handling. Saves time and labor. Very durable and practical. This is a modern 20th century band, everybody likes them. Baby chick bands, 18 colors, not numbered. Samples and catalog 2c stamp. Mention A. P. J.

**A. P. Spiller : Dept. A : Beverly, Mass.**

## \$60 PER HEN PER YEAR

SEND A POST CARD TO: DAY for The "Why and How of the Miller System." You will see that we positively guarantee each hen will net \$60 per year. Show our guarantee to your lawyer. Address: MILLER SYSTEM COMPANY, 15 7th St., Binghamton, N. Y.

## WHITE WYANDOTTES

By the most exacting care and attention extending over a continuous period of more than twenty-five years, producing but a few birds each season and these by breeding from pairs and trios, I have established a type of White Wyandottes closely approximating standard requirements that reproduce themselves with marked uniformity. A cull rarely results from my matings and high class specimens predominate. While I do not claim to have the "World's Best" I do claim to produce a much larger per cent of high class specimens than any other breeder. My yards have been visited by many prominent judges and fanciers, not one of whom has failed to concede my claim. I have a few rare good birds that you can buy at prices you can afford to pay if you want something right, that you may know what you are buying. I send on approval and pay return charges if not entirely satisfactory. I am offering a few settings of eggs, not from stock mated for the purpose, but from the identical birds I breed from. Fertility is guaranteed.

**W. S. COBB, UNION BANK BLDG., JACKSON, MICH.**

## MADISON SQUARE WINNERS

Over 42 Prizes Won in the Garden—December 1912, winners in Philadelphia.

### ROOFING

### Smashing Bargains

### FENCING

#### Corrugated Steel Roofing

**1 $\frac{1}{4}$ c Per Square Foot**

Here is the chance of a lifetime to buy the best roofing in the world, at a mere fraction of its real value. Our enormous buying power enabled us to pick up for spot cash a stock of this brand new, perfect corrugated, "V" crimped and Standing Seam Roofing and Brick Siding, at a tremendous sacrifice—way under what it is actually worth. Immediate cash needed made possible this purchase. Just another chapter added to the long list of our famous bargain sales.

#### Corrugated Steel Roofing Practically Indestructible

There is nothing else that compares with corrugated steel roofing for real protection. It makes a long, lasting roof. Is fire, rain, frost, wind, sun and lightning proof—warmer in winter—cooler in summer; and under ordinary circumstances does not leak, rot or warp, neither does it taint rain water. You can depend upon it that Corrugated Steel is the best material for roofing, siding and ceiling.

At 1 $\frac{1}{4}$ c per square foot, we furnish our grade AB-700 Steel Roofing, in sheets 22 x 24 inches x 1 $\frac{1}{4}$  inches. This price is delivered on board cars at Chicago.

#### Galvanized Steel Roofing

**2 $\frac{3}{4}$ c Per Square Foot**

Another big Steel Roofing Bargain. Several thousand squares of the very highest grade specially coated, corrugated, galvanized roofing and siding, made of specially prepared steel, of superior quality. Best roofing, and will last indefinitely. We will furnish it in suitable lengths for any purpose. Only a limited quantity on hand, so we urge you to send us your order immediately. Don't wait to write us again—order today, while this stock exists. Price only 2 $\frac{3}{4}$ c per square foot, and will outlast 4 to 1. Just drop us a line, and tell us the size of your studding and general facts, and we will help you to select proper sheets. If you are not ready to use the material now, we will reserve it for future delivery, if you will give us a small deposit on account. This price of 2 $\frac{3}{4}$ c per square foot is for our Lot AB-800 corrugated material, and is delivered on board cars at Chicago. If you prefer some other style, we will furnish it. We have this same grade in "V" crimped, Standing Seam and Brick Siding. Samples on application.

#### Ready Roofing With Supplies

**62c Per 108 Square Feet**

We have several thousand squares of a superior quality Ready Roofing, which we are offering in our AJAX BRAND, 1-ply, at a price of 62c per square of 108 square feet, including necessary cement and caps to lay it. This is undoubtedly the most remarkable bargain ever offered in Ready Roofing. This famous brand is put up 3 or 4 pieces to a roll. The price of 62c per square of 108 square feet is loaded on board cars at Chicago. We will, however, make a freight prepaid price on this same grade of roofing, including nails and necessary cement of 75c per roll of 108 square feet, and at this remarkably low price

#### We Pay the Freight

In full to any point east of Kansas and Nebraska and North of the Ohio River.

We will also furnish 2-ply, at 90c; 3-ply, at \$1.05. This Ajax Roofing is guaranteed to wear as long, and give as good service as any Rubber Surface Roofing on the market.

#### Send for Special Roofing Catalog and Samples

Write at once for our Special Roofing Catalog. Free samples and full instructions for laying roofing.

### Explanation

The Chicago House Wrecking Company known to the commercial world as the "Great Price Wreckers" is easily acknowledged the bargain house of the earth.

Our Mammoth plant covers 40 acres, and our list of customers are numbered by the hundreds of thousands, and include people from every walk in life. We sell practically everything under the sun at unbeatable prices. We buy our goods at Forced Sales, taking advantage of Sheriffs, Manufacturers' and Auction Sales. In this way we can sell brand new, clean high-grade goods at prices, in many instances even less than the cost of manufacture.

### Our Guarantee

Our capital stock is \$2,000,000. Any bank or Commercial Agency, or any publisher will confirm our responsibility. We have advertised in this paper for many years. Ask its publisher what he thinks of the Chicago House Wrecking Co.; get his personal opinion of the values, and our square methods of doing business. We guarantee each and every article that we sell to be exactly as per our representations. Should you buy anything from us that fails to come up to our representations, or does not agree with your expectations, we will take back such unsatisfactory merchandise at our freight expense. We want satisfied patrons.

### LUMBER

Complete houses and barns at an enormous saving. Never before in the history of Building Material has such an opportunity existed. We offer high grade, brand new complete lumber and building material needed for the construction of houses and barns at lower prices than ever before.

**20,000,000 Ft. of New Lumber at Our Yards and Warehouses Ready for Quick Delivery**

We have upwards of twenty million feet of first class, brand new lumber for the construction of buildings of every kind. A wonderful stock of the very finest millwork, interior trim, etc.—enough material to construct cities and villages everywhere. It is our determination that 1918 will be the "Banner" year in the history of our Great Lumber and Millwork department, and the way we will accomplish this, is by quoting prices that undersell any possible competition. The proof of this is in our catalog and literature.

Write today and tell us what you contemplate improving or building during this Spring—talk to us plainly, and we promise you the advice straight from the shoulder. No other concern in the world is equipped such as we are. Right in our main yard and warehouses, at Chicago, we can load you out complete, at one time, and in one carload, every single article required for the improvement of the building you have in mind. No where else can you go and get such service.

#### Personal Service To You

You can get the kind of service that will give you absolute satisfaction—satisfaction from the word "go." If you have ideas of your own as to the kind of building that you want, we will give you the benefit of the Greatest Architectural Department in the world. Will furnish you with plans according to your own ideas, and will quote you a price on the material that will make you a wonderful saving. Dollars saved are dollars earned.

Write today for our Book of Plans and Latest Catalog of Building Material and Supplies.

#### Brand New WIRE FENCING

**Less Than 1c Per Running Foot**

Biggest of all offers of the past. We come to you with the most wonderful proposition ever known, and offer you the very best woven wire fencing at a fraction of its real value; lower in price than ever before, not withstanding that all other merchants and manufacturers have advanced their prices on fencing. We are determined to simply get all the business in sight, and with that in view, we bought up from manufacturer's sales, 150 carloads of High Grade Woven Wire Hog, Cattle, Field and Poultry Fencing, Barb Wire and Nails, in quantities sufficient to take care of our regular customers and those who will quickly respond to this advertisement.

#### Barb Wire Less Than 2c Per Rod

Galvanized, two-point Barb-Wire, full weight (not the light kind) put up regular on spools, containing about 100 lbs. to a spool. It is made of No. 12 $\frac{1}{2}$  wire, with good weight barbs. Price per 100 lbs. during this sale, only \$1.95. Order by Lot No. AB-600. Several thousand spools of this Barb Wire, Painted, price per 100 lbs. \$1.75. Order by Lot AB-500. Also have in stock 1000 spools of light weight, new galvanized barb wire, put up 30 rods to the spool, made of No. 14 galvanized wire, No. 15 barbs, barbs 5 inches apart; price per spool of 80 rods \$1.45. Lot AB-400. We also have several other bargains. You never had a chance like this before, and we advise that you send us your order today. Don't wait until the material is sold—we cannot hold this quotation open.

#### Galvanized Hog Fencing

**AT A MATERIAL REDUCTION IN PRICE**

100,000 rods of 26 in. Galvanized Steel Spring Wire, 26 in. high, hog fence, put up in 10, 20, 40 and 60 rod rolls, made with 7 bars, spaced 12 in. apart, with No. 9 top and bottom wires, No. 11 intermediate wires, heavier than the regular fencing offered. Price per rod, during this sale, only 15c. Order by Lot AB-900. Same fencing spaced 12 in. apart, per rod during this sale, only 21c. Order by Lot AB-1000. Other heights at proportionately low prices.

#### High Grade Poultry Fencing

**48 in. HIGH PER ROD 27c**

A complete stock of all heights of Woven Wire Fencing for every purpose. Do not delay your order, but send it in at once, even if you are not ready to have it shipped. We will hold the material ready to deliver when you want it.

#### Several Carloads of Galvanized Wire Shorts

This is smooth wire, put up 100 lbs. to a coil, first-class for general use. Comes in sizes from 6 to 15 gauge. Price for 9 gauge, \$1.25 per 100 lbs. Lot AB-1200. Other sizes in proportion.

#### Some Big Bargains in Nails

At last we have the bargain of bargains. 10,000 kegs of genuine gray iron wire nails; will outlast all other kinds. Put up in regular kegs. Price per keg of 300 lbs., as follows:—

10 pennyweight, \$2.00    8 pennyweight, \$2.10  
6 pennyweight, \$2.15    Shingle Nails \$3.00

Also 5,000 kegs of Nails, mixed all kinds in a keg; good assortment, handy to have around your workshop. During this sale only, per 100 lbs., \$1.45. Order by Lot AB-1100. We have other bargains in nails.

Also, in this same job, we have 5,000 kegs of Fence Staples, galvanized; per keg, \$2.00. Lot AB-1400. Crimped wire for reinforcing, cut to any desired length; per 100 lbs., \$2.25. Lot AB-1300.

We have bargains in every line. Write us today for our Wire and Fence Catalog, but the best thing for you to do is to send your order now, and we will hold for shipping instructions.

## Covert's Barred Rocks Win

Again at Pittsburgh Great Exposition show, Jan. 1913, 4th cock, 2d pullet, 1 pen pullet mated, 2d pen cockerel mated

**CHICAGO, 1912** In the largest and best class of Barred Rocks ever brought together either east or west, 393 birds in all. First cock (29 in class), first and fifth hen (79 in class), second cockerel bred hen. The first and fifth hens are the same birds that won last year as pullets. I have also won at Buffalo, Cleveland and many other large shows during the past five years, demonstrating I have been and am producing exhibition quality for I raise all the birds I exhibit. My matings this year will be superior and I can supply your wants in either stock or eggs. Ten grand pens cockerel and pullet matings. Send for mating list. I guarantee to please you in your dealings with me. Write today, mention A. P. J.

**Covert Barred Rock Farm : Ashtabula, Ohio**

## CHAMPION LAYING STRAIN

# BUFF ORPINGTONS

### Record Breakers as Winners and Layers

Read these recent victories made by my birds and you will be convinced of their grand exhibition quality.

They won at Mineola, L. I., N. Y., Sept. 1912, 1st, 4th cock; 1st, 2d, 4th, hen; 1st and 4th cockerel; 2d pullet; 3d pen; Mineola Fair, special best display. Special, best cock, hen, cockerel and pullet, 103 Buff Orpingtons competing. They won at Hempstead, L. I., N. Y., 1912, 1st cockerel and color special, one color special for entire class of Buff Orpingtons. This cockerel won Silver Cup, best cockerel; Silver Cup, best Orpington in show; Silver Cup, best Buff Orpington in show, 1st, 3d, 4th and 7th hen;

4th pullet; 1st and 4th pen; Silver Cup by Hempstead Show, best display; Silver Cup by National S. C. Buff Orpington Club, best display; Silver Cup, best hen. Making in all 6 silver cups. Grand prize, Silver Medal, by American Poultry Association, for the best cockerel in the American, Asiatic, Mediterranean, English, Polish, Hamburg, French, Game and Oriental classes. Diploma by American Poultry Association, for the best males under one year in all standard varieties. Poultry Fanciers Association of Long Island, handsome diploma with gold seal and pendant ribbon, for best cockerel, hen and pen. Blue Ribbon for best dozen eggs, brown shelled; and five other specials, winning three times as many points as nearest competitor. The above remarkable winnings make my birds "Champion Prize Winners," and must convince you I have only "Quality Buff Orpingtons." But what good is a hen if she won't lay. You should be equally careful to select a "Laying Strain."

### MY STRAIN UNEQUALLED AS LAYERS

I have had pullets laying at 4 months, 19 days old, and lots of them laying before they are 5 months old. I have records of 8 pullets laying 217 eggs in 30 days. So you see my birds lay as well as win and no doubt that is the kind you want.

### MY GRAND CHAMPION MATINGS

I have 10 Grand Pens containing all the above winners and other carefully selected breeders. I have my blood lines well established and know how they breed, and I assure you stock hatched from any of my matings will please you. I have a range of prices to suit all customers. Eggs from my "Grand Champion" matings only \$15 per 15; other fine pens, \$10 and \$5 per 15. Fertility and satisfaction guaranteed. Send for my 1913 mating list containing illustrations of my prize winners and description of matings.

J. S. PENNINGTON -- BOX A -- PLAINFIELD, ILLINOIS

**ONEIDA INDIAN REDS**

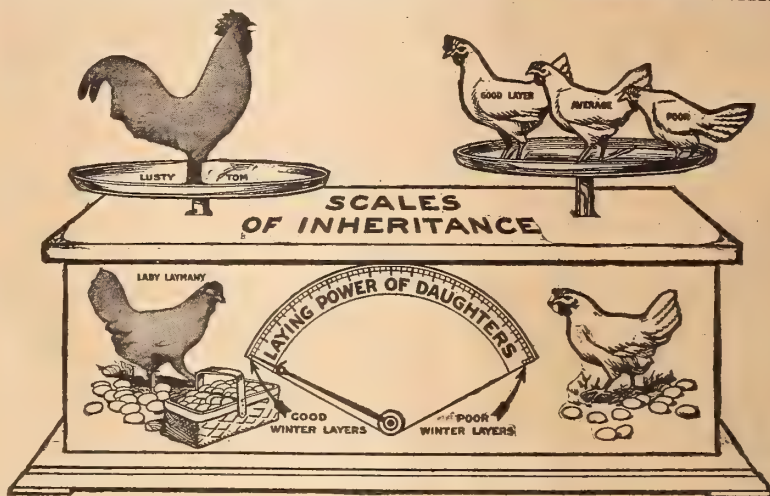

The Strain that has made the Breed Famous. Our Rose and Single Comb Reds made the most sensational win by winning more prizes than all competitors combined. This we consider the greatest triumph of the show season at the Pittsburg Fanciers' Club Show, February 17th to 22d. We made ten entries in Rose Comb Reds and one pen of Single Comb Reds. We won on Rose Combs, 1st and 3rd cocks, 1st and 4th cockerels, 2d and 3rd hens, 1st and 4th pullets; 2d on single comb pen, 40 points for best display. All other exhibitors combined winning 43 points. We won all three silver cups offered on Rose Comb Reds, seven out of eight club specials for color and shape. Our Rose Comb Cockerel, "The Pittsburger," won the sweepstake cup for best Rose Comb in the show. We have stock, eggs and baby chicks for sale. Don't fail to get our large illustrated catalogue which is free. It has more valuable information on Reds than any other catalogue issued.

ONTARIO VIEW POULTRY YARDS - ONEIDA, NEW YORK

**BARRED PLYMOUTH  
ROCKS****210 Eggs in 259 Days**

This was the official record made by one of the females in our pen at the International Egg Laying Contest at Storrs Agricultural College last year. Our five birds in this pen made a record of 836 eggs in 9 months and 11 days of actual laying. Eggs for hatching. Send for catalogue.

MAPLE GRANGE POUL. YARDS  
S. M. GOUCHER, MOORESTOWN, N.J.

**THE MALE IS MORE THAN HALF THE FLOCK**

Dr. Raymond Pearle of the Maine Experiment Station has lately made known to the world a wonderful discovery, as the result of careful experiments with hundreds of laying hens, covering a period of nine years.

Dr. Pearle has discovered that the ability to lay a large number of eggs is not inherited by a pullet from her mother, but that a male from a high producing hen gives to his daughters the character of large egg production, regardless of the number of eggs laid by their mothers.

He found that the only way to increase the number of eggs per hen per year is by the use of male birds in the breeding pens which are the sons of heavy laying hens. The males in Yesterlaid breeding pens are from trap-nested heavy laying hens—vigorous, sturdy fellows that pass their vigor on to their chicks. Hereditary constitutional vigor, that's what you want in your chicks.

Yesterlaid breeders produce perfectly

**POULTROLOGY—"Best Poultry Book ever written"**

That's what the people say who have read it. Beautifully bound; 144 pages; 70 pictures, drawings and plans. Tells how to feed hens to make them lay when the weather is coldest; how to get 60c a dozen for eggs when the market price is 30c; how to mix rations that make chicks grow rapidly, that make hens lay, and that fatten broilers in 7 to 12 days and hundreds of other things you want to know. Price \$1, postpaid. Write for special new customer offer which includes "Poultryology" free.

Yesterlaid Egg Farm Company, Dept. 5, Pacific, Missouri

shaped, chalk-white big eggs; their pullets lay early—at four months—in customers' hands. Yesterlaid Leghorns are exhibition fowls too. Chicks hatched from their eggs win in the hands of customers; names on request.

The Yesterlaid method of selecting, mating and feeding insures heavy laying and big hatches. The State Experiment Stations and other Institutions recognize the Superiority of Yesterlaid Leghorns. Fifteen Experiment Stations have bought Yesterlaid stock or eggs.

If you want Yesterlaid eggs that will hatch big, husky, quick growing chicks for you this season, order at once. Last season Yesterlaid customers had to "stand in line" and wait their turn for hatching eggs—the demand could not be fully supplied until almost June. Don't you be one that has to wait this season. Place your order now.

The Liberal Yesterlaid Guarantee insures you absolute satisfaction.

# S. C. Black and White Minorcas

In the past 23 years of our breeding the Minorcas has given us the experience to know what this grand breed is. And we have matings that are as good as the best. Eggs for hatching at reasonable prices. Write

## The Heart of the "Giant" Hens

The Newtown Heater is the "heart" that furnishes life-giving and life-preserving warmth to the eggs and chicks in the Newtown "Giant" Incubator and Brooder. Your eggs and chicks will always be safe if you hatch and brood with these "giant" hens.

## Newtown "Giant"

### Incubator and Brooder Heater

has three dampers, all regulated automatically—its base and water jacket are each cast in one piece—its top throttle valve is of heavy steel, which cannot warp, and fits on a sloping, funnel-shaped seat which prevents the lodgment of coal underneath. These exclusive "Newtown" features insure against undesirable draft and excessive heat. Let us prove to you why the "Newtown" will hatch and raise more chicks for you. Write now for our finely illustrated Incubator Catalog I and Brooder Catalog A.

## White Diarrhoea Cured and Prevented

Whiting's White Diarrhoea Remedy Is the Only  
Positive Cure and Preventive

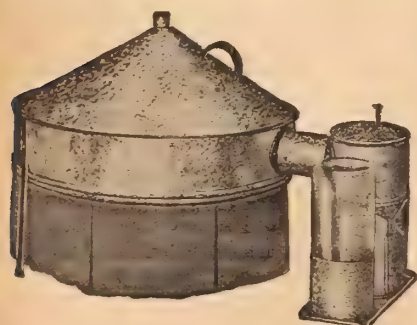

White Diarrhoea is a GERM disease. The instant the chick is hatched the germ becomes active and destroys more than half of all the chicks hatched. Until the discovery of Whiting's White Diarrhoea Remedy there was no cure.

We guarantee to cure chicks already affected and to prevent all the rest having White Diarrhoea, or refund your money.

Buy from dealers, or from us. Price, postpaid, 50 cents a bottle. There is no other real remedy.

## Brinkley's White Plymouth Rocks

"The Great Armory Show," 1912, Louisville—Brinkley's White Plymouth Rocks won more 1st and 2d prizes than all competitors combined. More special prizes were awarded Brinkley's White Plymouth Rocks than all competitors combined. "Jacksonville, Fla.," 1913—They were all there. The very best of them were there. Birds of the "Best in the World" strains and Owen Farms, also many other winning strains. Brinkley's White Plymouth Rocks made the greatest victory of the season, winning 1st and 2d cocks, A. P. A. medal for best male in the American class, 1st and 2d hens, silver cup for the best hen in the show, gold leg band for the best female in the American class, gold special for the whitest bird in the show, 1st and 2d cockerels, 3d and 4th hens, 3d prize pen. The best in the south. All these winners are mated in our 1913 grand matings. All regular matings, \$5.00 per 15. Special matings, \$10.00 and \$15.00 per 15. Utility eggs, \$10.00 per 100. Send stamp for beautiful mating list.

W. J. BRINKLEY :: BOX A, IUKA, MISSISSIPPI

## BARRED PLYMOUTH ROCKS

Madison Square Garden, New York, Winners—First Prize Hen and Second Prize Pullet were won by my birds, shown by me at the Great M. S. Garden, New York, Show, 1913. Birds of my breeding have also won at Philadelphia, Hagerstown, etc., this season and in years past. But this New York win stamps them among the leading and best lines of the world.

Exhibition Females My Specialty—My First Prize Pullet Bred Cockerels at Philadelphia and at Hagerstown were the sensation of the Barred Rock Class, in shape and line barring with the richest of color and best of breeding quality. Both are in same line as my First Prize Hens at New York and Philadelphia.

I now offer a few females and several Breeding Cockerels for Sale of the same line breeding at special prices while they last. Write me now. Cockerels at \$5 for quick sales. Some selected ones of special merit for \$7.50 and \$10. They are worth double that to any one who wishes to breed high class females. Pullets of my breeding have won first and second at the great Philadelphia show and at others as well. I assure absolute satisfaction to all. Write me.

**SPECIAL**—After April 1, I will offer for sale at special prices a choice lot of my breeding females, now in my pens. Write for particulars.

C. N. MYERS :: BOX A, HANOVER, PENNA.

## IT'S NO WONDER

THAT TRADE COMES BACK FOR

### Duston's White Wyandottes

READ THIS:

Pemberville, Ohio, 2/28, '13.  
Dear Sir: In reply to yours of the 19th will say you may use my letter regarding "Buster" which is one of the winners hatched from your eggs. 1909, won 1st at Elmore as a cockerel, 2d at Tiffin as a cockerel, score 94½. 1910, won 1st at Tiffin as a cock, score 95 (Falkner); 1st at Elmore, score 95 (McClave). 1911, won 1st at Elmore, 1st at Pemberville, 1st at Woodville, 1912 and 1913, won 1st at Bucyrus, score 94½ (Hawkins), 2d at Cleveland, score 95 (Emch), 1st at Pemberville, 94½ (Ira Keller), 1st Woodville, 94½ (Northrup). All judges scoring from 94½ to 96. I have had him against birds shipped from — and other large breeders to trim him but he only got it once and that was on account of his tail not being developed entirely for the show room at Cleveland. Remember I have been in hot classes with him against breeders like (several prominent mid-west breeders), and others. I have two hens and two pullets as good as he is, all his get. I have 1st, 2d and 3rd pullet of his mated to him. Scores, 96, 95½, 95½. So you see I may get something next year. I have all kinds of medals, badges, etc., won by this bird for special shape, solid color, highest scoring in show, from National White Wyandotte Club. Very truly,  
C. C. GRENIER.

I can show scores of such letters. That's breeding! That's class! That's breeding lines! That's producing! That's Duston! Don't it show you that the line you want must be a breeding, producing, winning line? Then order eggs direct from this ad from the finest of matings and I will tell you how to handle and mate them so you won't have to lay awake nights trying to keep track of matings. Eggs from best pens \$10.00 a set. Two sets \$18.00. Three sets \$25.00, or \$50.00 in hundred lots. My mating list free yet for sale. Three wonderful winning cocks. Write. Illustrated catalogue sent on receipt of 15 cents.

ARTHUR G. DUSTON, Box 1020, So. Framingham, Mass.

**R. C. Caldwell** Ships Baby Chicks of Quality on short notice. See ad on page 653

## SMITH'S SINGLE COMB BUFF LEGHORNS

The largest Buff Breeder in the world and the world's best blue ribbon winners and winter egg layers. I have mated this year over 1,500 fine breeders that are the pick of over 47,000 birds raised in the last 4 years and winners from 13 of the big shows.

Stock for sale at all times, 1 bird or 1,000 birds. Eggs, \$2 per 15, \$10 per 100, \$75 per 1,000 and up. I have incubator capacity for over 10,000 eggs every 3 weeks, and expect to hatch over 40,000 day-old chicks this year from good, strong, big, vigorous birds that range in age from 1 to 4 years, and the chicks will live and grow fast. Day-old chicks, 25 for \$6, 50 for \$11, \$20 per 100, \$180 per 1,000 and up. Get my guarantee on stock, chicks and eggs before you purchase your stock. Send 10 cents in stamps for catalogue and find out how to raise 150 pullets to the age of six months for 15¢ cents each.

F. S. Smith, :: Life Member A. P. A. and Life Member American Buff Leghorn Club :: Box C and D, Hamilton, Ohio

## SINGLE COMB RHODE ISLAND REDS

The Verdict Is in and Victory Unprecedented Is Ours

At the great Philadelphia show December, 1912, our line of S. C. Reds won the leading and classy prizes of the entire show in competition with all birds shown. They won 1st cockerel, 1st hen, 2nd and 3rd pullets and 1st pen in a class of 122 birds. Our 1st prize cockerel was awarded the cup for the best cockerel and the best bird in entire show with everyone of the 4,000 birds competing. He also won color and shape specials with other specials for our entire entry, including the State cup for best display. At Cleveland, Ohio, January, 1913, we won 1st cock, 1st cockerel, 1st and 3rd hens, 1st and 2nd pullets and 1st pen. Here our cockerel was awarded the A. P. A. silver medal for the best bird in show and we also won color and shape specials on male and female. At Pittsburgh show, February, 1913, we won 1st cock, 1st hen, 1st and 2nd pullets, 1st pen and 1st cockerel and Champion cockerel again winning the A. P. A. silver medal for the best cockerel and bird in the entire show, and color and shape specials on male and female. At Cleveland, Ohio, January, 1912, our first prize pen was the sensation of the show, judges and breeders saying they never saw anything like it for quality and evenness. Write us your wants. If you want quality birds or eggs for hatching, we can supply you. Absolute satisfaction guaranteed to all. Mention American Poultry Journal when writing.

SCHENLEY HEIGHTS POULTRY FARM, C. F. RANKIN, PROP., 316 FOURTH AVE., PITTSBURGH, PA.

## Stop the Mortality --- Stop Bowel Trouble.

If your chicks are not doing as well as you would like, if they are dying of this horrible scourge called White Diarrhea, get a Simplex Brooder Stove and get them growing as you never before saw chicks grow. A Simplex will stop bowel trouble once and for all. The Simplex will turn your varying success and failure into one thing—success you never dreamed possible. It will put the profits into your pockets instead of dead chicks. It has saved hundreds of breeders from utter failure. It will save you. Just nature, fresh air, which can be provided only by the Simplex System, will not only stop that terrible scourge, but better still, will prevent it. Chicks around a Simplex are always happy, healthy and sturdy. They grow into dollars

### The Reason Why

Because, with our system of ventilation, the air in the room is changed every fifteen minutes, and the carbon-dioxide which the chicks exhale in their breath is carried out of the room instantly. In the old fashioned brooding systems, which it is impossible to ventilate properly, the chicks are compelled to breathe back into their systems the poison in the shape of carbon-dioxide which nature has thrown off through their lungs and bowels. This carbon-dioxide is the only cause of bowel trouble and chicks which are kept in properly ventilated rooms are seldom afflicted with bowel trouble, and never when fed and housed correctly. It is a well known fact that air is more essential to animal life than food. We breathe air in order to secure the oxygen contained therein. After passing through the lungs the oxygen is extracted, and expelled in the form of carbon-dioxide which is poison to any living animal. To the hover system it is easy to trace the reason for the slow growth of chickens and White Diarrhea which sickens the heart of the poultryman and puts so many of them out of business.

**The Simplex Brooder Stove Saves Nine-tenths the Work, Nearly Doubles what you Raise with One-Quarter the Expense and One-Fifth the Investment.**

"SUCCESSFUL BROODING" is the title of a book written by N. P. Husted and is the one book on Brooding that tells you something. It tells how to raise chicks so as to get hens that will lay plenty of fertile eggs any month in the year. **50c** Sent postpaid for

Send for our free catalogue. It will show you how to make more money in the poultry business. It fully explains our system of ventilation and heating. We send it free. Write for it today, now, while you are thinking about it. It will surely be the beginning of the end of your brooder troubles. Address

Simplex Brooder Stove Co., 137 4th St., N.W., Grand Rapids, Mich

We extend you an invitation to visit Simplex Farm and see the Simplex Brooder Stove working. We have stoves now in operation with 1500 chicks around them. Call at our offices in Grand Rapids at 10 a. m. or 2 p. m. and we will take you out to Simplex Farm free of charge.

CHICAGO SENSATION—First Prize Pen Cock, Chicago, 1910. Pronounced by Judges the Finest Male Bird Ever Bred.

## STANDARD LINE-BRED S. C. WHITE LEGHORNS

EXCLUSIVELY

### I HAVE THE CHICAGO WINNERS

Which have swept the platter clean the last four years and have won more prizes than all other exhibitors combined. My strain in customer's hands "like Parmenter and E. W. Grove" has won what few prizes I lost at Chicago, which proves that I sell you eggs and stock from my best birds. My most recent winnings were at the big Louisville, Ky., Dec. 23-28, 1912. The stronghold of the South, where I won. 1, 3, 4 cock; 1, 2, 3 hen; 1, 2, 3 cockerel; 1, 2, 5 pullet and 1 pen, in class of over 150 birds. The cream of the south. Every bird entered by me was placed.

### DON'T BE MISLED

And get your start from a bought reputation, but buy from a specialist who can prove conclusively by his winnings that he breeds the birds himself and knows the art of doing it. The Iowa, Oklahoma and Pennsylvania State Departments of Agriculture and United States Department of Agriculture are among my customers. They know where to buy the best grade of stock for demonstration and experimental purposes. I have plenty of "Stock Eggs" for "Hatching" and day-old "Chicks" to offer of the best quality I ever owned or saw. Write me your wants. Inclose 10 cents in stamps or coin for the original book of information on "Parkside Strain" of S. C. White Leghorns.

## A Year's Course in Poultry Culture

**For the Novice and the Expert---the Amateur and Professional**

**T**HIS COURSE is used by a number of Agricultural Colleges.  
Many poultrymen have paid \$20 for it by mail. It is one of  
the most thorough and practical courses ever devised.  
The course covers every phase of the poultry business. It  
gets right down to the root of each problem. It steers the beginner  
around the pitfalls, and gives the established poultryman new ideas  
and methods. The following synopsis shows how complete it is.  
Each of its 25 divisions is a complete lecture on its particular  
subject.

I—The Poultryman and His Call-  
ing. II—The Purpose of Poultry  
Keeping. III—Location of the  
Plant. IV—Buildings, Plans, Esti-  
mates, Construction and Interior  
Furnishings. V—Yards, Parks and  
Ranges. VI—Nutrition. VII—Feed-  
ing. VIII—General Management. IX  
—Eggs. X—Breeding. XI—Breeds.  
XII—Incubation. XIII—Brooding.  
XIV—Rearing Chicks After Brood-

ing Age. XV—Preparing Pullets for  
Laying. XVI—Preparing for Mark-  
et. XVII—Marketing. XVIII—Dis-  
eases. XIX—Parasites and Other  
Enemies. XX—Exhibiting, Scoring  
and Judging. XXI—Wastes, Leaks  
and By Products. XXII—Records  
and Accounts. XXIII—Advertising.  
XXIV—Cooking Poultry Products.  
XXV—Poultry Literature.

This Course Begins in the April Number of Poultry Item, "America's  
Most Talked-About Poultry Magazine." It Runs Through the Year,  
With Liberal Installments in Every Issue.

### The April Number is the Big Leghorn Special--Don't Miss It

Poultry Item makes no "wonderful premium offers." It gives away no "valu-  
able inducements." It needs none. It charges a fair price for a straight sub-  
scription—and is always worth it. It gives its readers sound, practical, up-  
to-date information. Each issue is helpful with its Question and Answer  
department, Timely Editorials, the news of the poultry world, pictures of  
hundreds of prize-winners. What its readers like about The Poultry is  
its individuality. Add it to your list—it will pay you.

**Subscription Price, 50c a Year, 3 Years, \$1**

Subscribe Now! Send the price today! Get this Valuable Course and the  
Big Special Numbers. Don't wait. Remember, the Course starts in the  
April Number.

**THE POULTRY ITEM, Box A, Sellersville, Pa.**

## Single Comb White Leghorns That Lay, Weigh and Win

Your success, whether it be for the introduction of new blood or laying a foundation for your stock, depends upon the reputation of the man behind the firm from whom you secure your stock or eggs. Believing as I do, that the majority of the people are honest, I stand ready at all times to make good, stock or eggs secured from me, any claims that my customers might present. My business at present has reached such proportions, that it is almost impossible for me to meet the demands with the seven thousand head of stock that I have on hand. It is impossible for me to describe our methods of rearing poultry in so small a space, but if you will send for my illustrated mating list, which is sent free on request, you will receive in a concise form our ideas of a down-to-date poultry plant. Or if you will send fifty cents in stamps or coin, I will send you postpaid my 64-page catalogue which explains in detail every phase of the poultry industry. This book, as is everything else bought of the E. W. Grove, Jr. Poultry Farm, guaranteed satisfactory or your money back.

Now is the time to book your orders for eggs and join the list of satisfied raisers of Grove strain of S. C. White Leghorns. All orders delivered in the order in which they are received.

Yours for better poultry,

*E. W. Grove, Jr.*

**Route 1, Clayton, Missouri**

It's not the brand on a horse that makes him travel, nor is it fine feathers on a hen that makes her win or lay, but their breeding.

## Day Olds

White Indian Runner ducklings, 50c each  
Single Comb White Leghorn chicks, 15c each  
Fancy hatching eggs, half above prices. Safe arrival and fertility guaranteed.

Our **White Runners** are pure line bred, and most prolific layers known. We have four generations in our yards and know what they produce. **Guaranteed** never one feather or egg but white. They have brought home many prizes. Have won first wherever shown. They paid us \$50.00 each last year. It pays to start with good ones.

Our **Leghorns** have 205 acres of alfalfa and fields interspersed with spring branches and shade to roam over. **No man** in our breeding yards whose mother has not produced 200 eggs in one year. Incidentally we have a box of blue ribbons they have won. We raised over 95% ducklings hatched and over 90% Leghorn chicks last year. This speaks more than pages as to health and vitality of our flocks. Booklet telling our way free to all customers—not for sale. It contains no wonderful secret, but is a simple work-a-day outline that has proven satisfactory with us. Order direct from this ad. Money back without argument if you are not satisfied. Catalog upon request.

**JAS. R. SNYDER**  
BOX O. :: FRAZER, MO.

# Shields' S. and R. C. Reds

Winners at leading shows wherever shown. Young stock and last season's breeders and exhibition birds at reasonable prices. No better breeding. Write today.

Chas. Shields : Library Place, North Side : Pittsburgh, Pennsylvania

## White Rocks

I offer you eggs for hatching from my "De Luxe," mating, headed by a cockerel that won at the Illinois State Fair, Quincy Poultry Show, and Illinois State Show (The National White Rock Club Meeting Show), where he defeated Owen Farm's cockerel that won 1st at Chicago for \$7.00 per 15 eggs. Express charges prepaid. The mother of this cockerel laid 210 eggs in one year, and he is mated to my very best females. Eggs from my other special matings \$1.00 per 15; \$18.00 per 100. Express charges prepaid. From a large flock of high-class birds \$2.00 per 15; \$7.00 per 100. Extra high class breeding cockerels, \$5.00 each. Show cockerels \$7.50, \$10.00 and \$15.00 each. Mating list free.

**CHAS. A. SIMMONDS**  
CAMP POINT :: ILLINOIS

## WHITE ROCKS AND WHITE WYANDOTTES

The big shows are over and it is interesting to know who made the greatest WINNINGS. At the BOSTON SHOW, Jan. 7-11-13 in a class of 230 White Rocks WE WON 1st and 3rd Cock; 1st Hen; 1st, 2nd and 3rd Pullet; 1st Pen; \$100.00 Champion Challenge Cup, Best Male; Best Display; Best 2 Cocks; 2 Hens, 2 Ckls, 2 Pullets and Pen; Champion Male, Champion Female; Best Headed Male; 3 Best Cockerels and 3 Best Pullets.

Our Wyandottes won at New York, Dec. 31st to Jan. 4th, 4th Cock; 2nd Pen, in class of 18. Also at New Haven, Ct., Nov. 1912 on two entries, winning 1st Pullet; 2nd Cockerel and A. P. A. Silver Medal for best Cockerel in show owned by a member. Brockton Fair in Oct. 1912, on three entries winning 1st Cockerel; 2nd Pullet and 1st Pen. Shape and Color Special.

Extra choice breeding birds for sale. NO ROCK EGGS for sale before April 15th. Wyandotte Eggs after Feb. 15th. Remember WE HAVE A RECORD. Tel Marlboro Ex. Be sure to state WHICH BREED when writing us.

Rockandotte Farm : W. R. Graves, Judge  
Mrs. S. H. Graves, Judge : R. 3, Southboro, Mass.

## TABASCO REDS

### Champion S. C. Rhode Island Reds

Winners—1913—of best display at Madison Square Garden, with First and Fifth Cockerels, First and Second Pens, etc. Thirty Points to the next competitor's nineteen.

Winners—1913—First Cockerel and Second Pen, with Specials, at Boston's Great Show. First Cockerel at both New York and Boston in one season is an unequalled record to date.

Winners—1912—of the \$50 Cup for the best Cock, Cockerel, Hen, Pullet and Pen, at the annual meeting of the R. I. Red Club of America, at Boston.

Winners—1911—of First and Third Cockerels at Madison Square Garden, and First and Third Cockerels at Boston.

Winners of seven of the sixteen ribbons in the Cockerel Classes at Madison Square Garden the last three years.

Winners of First Pen at Boston five of the last six years.  
For red-hot Tabasco Reds address,

Old Acres :: Foxboro, Massachusetts

# YOUNG'S STRAIN S. C. WHITE LEGHORNS

(I HAVE NO OTHER BREEDS)

My strain won every prize and special offered at the world's greatest show, Madison Square Garden, New York, January, 1913. My individual winnings were:

WINNER OF FIRST AND SPECIAL PRIZES, DEC. 1923, 1911  
MADISON SQUARE GARDEN, NEW YORK.  
BRED AND OWNED BY D. W. YOUNG, MONROE, N. Y.

Cocks, 1-3-4-5-6.

Hens, 2-4-5-6-7.

Cockerels, 1-2-3-6-7.

Pullets, 1-3-5.

Pens, 3-5.

Elmhurst Trophy, value \$150.00, for best display.

New York State Cup, value \$50.00, for best display.

New York P. & P. A. Special, value \$25.00, for best display.

N. S. C. W. Leghorn Club Special for best display.

Special for best cock.

Special for best male.

Special for best shaped male.

Special for best colored male.

Special for best headed male.

Special for best cockerel.

Special for best pullet.

Special for best female.

Diploma presented by A. P. A. for best cockerel.

In fact, for the past ten years, my strain has won in every show of any note in the United States and Canada. They are the standard for all the Leghorns of America, and the greatest layers of all varieties of domestic fowl. I have hundreds of cockerels for sale that can win anywhere, and after winning will improve your stock for eggs and exhibition points. (Remember you cannot win without my strain.) Mating list free. ## WHITE ORPINGTONS

Grand young and old stock fit for any breeding pens and at prices you can afford to pay. They are bred direct from my Chicago winners of the last three years. My pens are now mated and I have two that will interest any breeder in the country. Be sure to get my mating list before you book your hatching eggs. My winning of the big Silver Cup for the best display at Chicago, December, 1911, besides 1st pullet, 2d cockerel, 3d hen and 5th cock the year before, is ample proof of the quality of my stock.

**Dr. Guy Blencoe, Vice-President Am. Alma Center, Wisconsin**  
Wh. Orpington Club

## FLANDERS' S. C. WHITE LEGHORNS

(PARMENTER STRAIN)—LATEST CHICAGO winning sweepstake for most points, defeating N. P. Eastling and E. W. Groves special for three best cockerels, first and fifth hen, second pullet, second pen and fourth cock. We have the birds and equipment and JUST WATCH US GROW. We will have only a limited number of eggs for sale this season. In stock we have a large number of yearling hens at great bargains and a few cocks and cockerels. Inquiries cheerfully answered. If possible come and see our plant and birds. If not send for free mating list. A postal brings it.

Flanders' White Leghorn Farm, Robt. D. Parmenter, Mgr., R. 1, Box 80, Orchard Lake, Mich.

## SECOND TO NONE--ANCONAS

America's and England's very choicest imported and bred Anconas; and also White Indian Runner Ducks., including Crystal Palace, Madison Square Garden, Cleveland, Guelph, Toronto, London, Hamilton, East York, and all the large shows in Canada. The only line-bred registered Anconas in America. Write for my mating list and particulars. Eggs from this stock cannot fail to produce you first prize show birds, and in my pens are the following birds: 1st cock, Madison Square Garden, New York, 1913; 1st and 2d pullet, Madison Square Garden, New York, 1913; 1st cockerel Crystal Palace, England; 1st and 3d hen, Guelph, Ont., 1912; 1st, 2d, 3d, and 4th pullets, Guelph, Ont., 1912; 2d cock, Guelph, Ont., 1912; 1st hen, Toronto, Ont., 1912; 1st pullet, Toronto, Ont., 1912; 1st, 2d, 3d, 4th pullets, London, Ont., 1912; 1st and 2d cockerel, London, Ont., 1912; 1st and 2d cocks, East York, Ont., 1912; 1st and 2d hens, East York, Ont., 1912; 1st cock, Hamilton, Ont., 1912; special hen, Hamilton, Ont., 1912; Quebec Provincial Poultry Show, Montreal, Feb., 1913, 1st and 2d cock, 1st, 2d and 4th hen, 1st, 2d, 3d and 4th cockerel, 1st and 2d pullet. I have also a number of other prize birds too numerous to mention.

**Dr. A. H. Hall, Prop. Diamond Ancona Poultry Yards, 394 Main St. E., Hamilton, Ontario**

Pres. Canadian Mottled Ancona Club; member of the International Ancona Club, Ancona Club of America, Ancona Club, and, in fact, I am a member of every Ancona Club in America.

## MAPLE FARM OF MIDLOTHIAN WHITE PLYMOUTH ROCKS

They combine size, shape, style and head points and above all their power of reproduction both in fancy points and as superior layers. They are bred right and mated right to produce winners for the coming show season as they have done in the past.

### EGGS EGGS EGGS EGGS

Never before has Maple Farm been in as good a position to furnish its customers with eggs from such extremely high class matings as this season. Every breeder is of that modern type and wears that silvery white plumage. They are truly ideals in White Plymouth Rock "Perfection."

All our 1912 Illinois State Fair and Chicago winners are in our matings this season, which enables our customers to raise winners as well as ourselves.

Eggs for hatching from finest exhibition matings, \$10.00 per 15 and \$60.00 per hundred. Baby chicks from exhibition matings \$1.00 each or \$75.00 per hundred.

Utility cockerels that will improve your flock in size and egg production at \$3.00 and \$5.00 each.

# YOU SHOULD WORRY

## ABOUT PLACING YOUR ORDER FOR HATCHING EGGS

Our birds have won in almost every important show in this country and Canada for our customers. They have won 35 firsts, 22 seconds, 28 thirds, 18 fourths, 16 fifths and almost 100 cups, specials, etc., in the last three years at Grand Central Palace, New York, Boston and Philadelphia for us. They can win for you. Our record for 1912 has never been approached by any White Leghorn breeder at the big shows. Our winnings are as follows:

### At the Great Hagerstown Fair, October, 1912

Cocks, 1 and 4; Hens, 1; Cockerels, 2, 3 and 5; Pullets, 1, 2 and 3; Pens, Old, 1; Pens, Young, 1; Specials for Best Leghorn Male and special for best bird in the Mediterranean classes and best display.

### At Grand Central Palace, New York

Cocks, 1, 2, 3, 4, 6 and 7; Hens, 1, 2, 3, 4, 5, 6; Cockerels, 1, 2, 3, 4, 5; Pullets, 1, 2, 3, 5, 6, 7; Pens, 2, 3, 4; Specials for best head Male and Female, best color Male and Female, best shape Female, best display, and Gold Special for best display of any variety in the show. This win was made in competition with eighteen of our best breeders.

### At the Boston Show, Boston, Mass.

Cocks, 1, 2; Hens, 1, 3, 6; Cockerels, 1, 2, 3, 4; Pullets, 1, 3, 6; Pen, 3; Specials for best Display, best Male, best Female, best color Male and Female, best shape Male and Female, best head Male and Female, and Special for best bird in the Mediterranean classes. This win made in competition with fifteen other breeders, in the largest show ever held in the United States.

We can supply hatching eggs at 60 cents each from our very best pens. (The same ones we hatch our own winners from), 35c and 20c each, or \$15 per 100 from other good matings. Buy from the breeder that produces the goods. "Actions speak louder than words." Send for mating list, mentioning American Poultry Journal.

## ORIGINATORS

—OF ALL THE—  
**ORPINGTON FOWLS AND DUCKS**

ESTABLISHED 1873 **BOX A, SCOTCH PLAINS, NEW JERSEY**

Eventually if after the best Orpingtons, all varieties, you will send to their originators. Why not now? and avoid loss and disappointment; we guarantee safe delivery and satisfaction, which is backed by a reputation of forty years' standing. This means

much to you. We are not here today and gone tomorrow as some breeders have been and are doing. Then experience counts. Surely we should understand Orpingtons better than a man who has had them just a year or two. We made the Orpingtons, all of them, including the Blue Orpington, our latest production, and are recognized headquarters for the best. A visit to our plant, where you are cordially welcome, will prove this, as well as our thirteen thousand first prizes, and our winning 103 firsts and 72 seconds at Madison Square in six showings, more than 8 times as many firsts as any other Orpington breeder. We can supply on the same day as order is received. The finest line of exhibition and breeding birds that we have ever had. Imported birds from our English plant, personally selected by our Mr. P. A. Cook for the American requirements, which English breeders do not know. Or American bred birds from our many American winners, sons of our first prize Madison Square White, Buff, Black and Jubilee Orpington cockerels.

**EGGS** from the **Finest Orpingtons** in the world, all varieties, and our first prize 1913 winners, \$20 a setting; three settings for \$50. From fine stock and second prize winners, \$10 a setting.

We will guarantee our best eggs at \$20 a setting to produce better birds than from any eggs purchased at \$75 a setting upwards from any other breeder; if not, we will refund in full the money paid us.

**Remember** that many of the first prize winners at the largest shows during the past season were hatched from our best eggs. **Blue Orpington eggs** at one price, \$20 a setting.

If you can advertise **Cook strain Orpingtons** it will add money to your bank account and prestige to your stock. It pays to own **Cook Orpingtons**. Ask the people who own them.

### Send 10 Cents for Illustrated Catalogue

Containing history of the origination of all the Orpingtons and hints on poultry keeping. **Mating List free.** Advice free. Inspection cordially invited. Trains met. Cook's Roup and Worm Powder, also laying and condition powder, for sale in \$1 and \$2 boxes. Ornamental land and water fowl for sale.

## Stoddard on That Remarkable Bulletin

A Detailed Review of Dr. Pearl's Recently Issued Bulletin of the Maine Station—Part 1

By H. H. Stoddard, Riviera, Texas

THE MANAGING EDITOR asks me to review Bulletin 205 of the Maine Station, a publication he has called "rather remarkable." Yes, rather!

Shall treat the Bulletin at considerable length, because the citations of eminent authorities which are appropriate have a value of their own, irrespective of their bearing on the subject matter of the Bulletin, and convey facts which are too often unknown or unconsidered by poultrymen.

First impulse is to draw my pen at one fell swoop through half a hundred pages of the truly curious production in question. Will explain by the story of the lawyer and his client. The latter, having

been put in jail, preparatory to trial sent for a lawyer to find whether his arrest was legal. The lawyer on examination found that it was not, and exclaimed with indignation, "Why, they can't put you in jail for that!" "And I tell you I am here."

The Bulletin teaches that high fecundity cannot ever be inherited from hens by their female progeny. But it is often thus inherited, that's all. Thousands of things are inherited by daughters from their mothers. Look at the children of the families living near you. Some take after their fathers and some after their mothers, do they not? Some inherited peculiarities like size, height, complexion, etc., which you can perceive across the street mayhap. Dispositions and the female line, especially to sons. If from the roll of the world's great men were stricken all the "mothers' boys," a ragged roll it would surely be.

various abilities have also often plainly descended through In itself, the universal use of the term "mother's boy" proves how continually the fact of descent of traits in the female line is impressed upon common observation.

It may be objected that although hundreds of other traits descend from mothers, including things both physical and mental and moral as well; yet those in which the function of reproduction is concerned are an exception. But the man is in jail. The laying of an egg concerns the organs and functions of reproduction, now doesn't it? Well, you know well enough that color of the egg shell comes from the mother. A hen of the white egg persuasion lays a white egg irrespective of whether the male she was mated with was of a light or dark shelled race. If the male is dark shelled, the female progeny of the union will either lay eggs intermediate in color or a part will be light and a part dark, showing that the power of determining egg shell color exists in both sire and dam.

Just so the shape and size of her eggs is determined by the mother, and surely she has her say-so in regard to the size, shape and color of her chicks also. Biddy is very strenuous in having a finger in the pie in regard to matters concerning the reproductive function and heredity. I last year procured some beautifully mottled gray hens for sitters, and their shape, size and disposition being so perfect for the purpose, I later stocked a breeding pen with them in which I placed a pure bred White Rock male. Result: some chicks

snow white and others with the exact tint and mottlings of the dams to a T.

But, says the objector again, "though you have proved that the reproductive powers of the female may entail certain traits such as size, shape, color, etc., this is not proving that the trait of high fecundity itself can be bestowed by her." Well, let us see about that.

First, let us look over nature's broad field. It has long been known that wild birds, reptiles, fishes, the higher animals like quadrupeds, the lower ones such as insects, and even plants, follow the same laws in such matters as we are now discussing. Even plants are endowed with sex as much as animals are, though this fact long remained undiscovered. High fecundity is inherited in the female line, everywhere—prairie, mountain, lake, river and ocean's depths.

Some breeds of sheep possess low fecundity, bringing forth but one at a birth. This trait is inherited, there being hardly an exception in a hundred cases. Another breed uniformly brings forth twins or triplets, and this high fecundity is inherited, too. In some families of humans high fecundity persists in being bequeathed from great-grandmother down, twins appearing, with occasionally triplets for a change. The luckless wight who courts one of the young ladies of such descent through a line of grandmothers has a hard time with his bachelor comrades, who tell him he must have lots of courage or lots of cash, or both would be better. Note that the unusual fecundity comes down the female line.

So much for a broad generalization. But Dr. Pearl may not care for a broad outlook on the whole animal and vegetable world. He may say that he is concerned only with bird life. Well, please look here a minute. Papa and mamma woodpecker both labor hard cleaning out a tree hollow, and a chickaree squirrel comes regularly and robs their nest, and every time, the hen bird, in obedience to the holy instinct of perpetuity, lays another egg. Dr. Woods alluded to similar cases in last month's American Poultry Journal, where fowls and pigeons were concerned.

It is hard to see that anything other than the hen bird's own individual mind made her keep on laying. She probably would have kept laying, for a while at any rate, if her husband and the chickaree had both been killed the same day, for our fowls will certainly lay after their accustomed male companion is killed, or if they had never had one at all. The mind of the female has power over her body to influence fecundity, that is certain, for if you move a lot of hens and shut them up in a strange place, they will after two or three days stop laying nearly or quite altogether. There need not be any rooster in the flock at all to bring his powerful intellect to bear. The hens need never to have seen a rooster in their lives. Their own minds can control fecundity without any male mind to assist. Can control it either way to lessen and increase.

But still our doctor of philosophy may object. He may claim that all I have said is not to the point. He may urge that the innate power itself which the females possess to manifest in an emergency an exceptional "provisional fecundity"; or, on the other hand, ability to check fecundity, runs through the race for generations and always through eggs that are fertilized, and therefore the male sex has an

opportunity to become the sole custodian of the trait of fecundity and of the power to transmit it.

In other words, high fecundity is brought about through the element of fertilization contributed by the male. That he care not about an individual case of a bird robbed of her eggs in a hollow tree or of hens stopping laying because shut up in a strange place. That these are incidents or accidents merely, where the power finds expression. That the power or faculty or attribute itself is what descends and always in the male line.

In answer let me come right down to brass tacks. Take a cock that you know has good laying blood, because, first, you raised a lot of pullets from him that, as pullet-hens, laid remarkably well and decidedly better than their mothers, showing that he not only possessed the right fecundity

of mothers are mated to males of equal tendency towards begetting the quality of high fecundity.

Now I would not be misunderstood. I do not deny the influence of the male bird in helping to build up a strain of great laying. Neither do I know anybody who does. The trapnesters and alleged 200-egg strain founders to a man always prefer males from prolific mothers. What I do deny is that dams have no finger in the pie of hereditary fecundity. They have a great deal to say about it.

In humans, traits distinctly masculine may be transmitted to sons by mothers, and feminine traits to daughters by fathers. Paradoxically, a man may hand down a quality he never had himself, and a woman may bequeath through descent what she never possessed personally.

In the live stock realm, ewes of a breed of sheep, the females of which are hornless, after mating with a breed, the rams of which have very big horns, give male lambs that have big horns. Ewes that are hornless themselves, when mated to rams of a breed both sexes of which are horned, will yield not only horned male lambs but sometimes horned female lambs. A bull possesses no quality of milk, but can transmit richness to the milk of his daughters or on the other hand a blueness and poverty of the lacteal fluid that will set the inspectors on the track of the hapless milkman.

To find what the power of character is in the power of transmitting unusual fecundity, no elaborate mathematical tables or technical calculation need be used. Neither "words of learned length and thundering sound" are necessary in explaining to the everyday practical poultryman useful facts and truths.

The procuring a male bird of prolific stock by paying attention to the prolific qualities of his ancestry and sisters,

element but was prepotent in transmitting the quality. Second, all his sisters were great layers. Third, his father and grandfather and uncles were proved to have been of high fecundity stock. We mention also that if his grandmother and great-grandmother and all his female cousins are good layers, too, this will do no harm.

Now behold the bird of proud lineage, the cock of the walk, indeed, who is charged up to the muzzle with the fecund principle. He even walks as though he were "stepping on eggs" and full of eggs. Mate him to a fair-sized flock of hens, proved by careful previous records to be of diverse fecundity, no two alike and ranging from medium to high.

You will get pullets of varying fecundity, that's what you will get. They will be likely, in fact, to vary even more than their mothers.

Is not the instance pat? Is it too general or vague, or have I come right down to brass foundation, as I said I would? Yet Dr. Pearl declares, page 388, "the same proportion of daughters of high fecundity may be obtained from mothers of low fecundity, as can from those of high fecundity, provided both sets of mothers are mated to males of the same gametic constitution." This is opposed to the experience of every observing poultry man in the country.

"Paul, thou art beside thyself; much learning doth make thee mad."

Note.—In the quotation from Dr. Pearl, "gametic constitution" means that portion, department or function of the male birds which relates to their transmitting fecundity to progeny. Just as if the doctor had said, provided both sets

and by testing his progeny as I have described, is a simple, common-sense operation. Any state station can carry it out and secure every mite of information that could be obtained by all the tabulations and curves of the most accomplished mathematicians. Mating the selected male to hens of a particular kind is equally easy.

What is more important than great mathematical capacities is taking precautions against disturbing elements such as inbreeding having occurred or any such influence, when birds are to be experimented with. Over and over again results of experiments have been valueless because of inbreeding on the side of one only of the contestants and of the unwillingness on the part of the experimenters, drugged with the poison of "line breeding" fashions, to perceive its

evil effects, and, what is equally important, the recognition of the good effects of crossing allied strains. Darwin says:

"The gain in constitutional vigor derived from an occasional cross between individuals of the same variety, but belonging to distinct families, or between distinct varieties, has not been so largely or so frequently discussed, as have the evil effects of too close interbreeding. But the former point is the more important of the two, inasmuch as the evidence is more decisive. The evil results from close interbreeding are difficult to detect, for they accumulate slowly and differ much in degree with different species; whilst the

and the difficulty of distinguishing between such direct evil and the inevitable augmentation of any morbid tendencies which may be latent or apparent in the related parents. On the other hand, the benefit from a cross, even when there has not been any very close interbreeding, is almost invariably at once conspicuous.

"That evil directly follows from any degree of close interbreeding has been denied by many persons, but rarely by any practical breeder; and never, as far as I know, by one who has largely bred animals which propagate their kind quickly. Many physiologists attribute the evil exclusively to the combination and consequent increase of morbid tendencies common to both parents; that this is an active source of mischief there can be no doubt.

"It is unfortunately too notorious that men and various domestic animals endowed with a wretched constitution, and with a strong hereditary disposition to disease, if not actually ill, are fully capable of procreating their kind. Close interbreeding, on the other hand, induces sterility; and this indicates something quite distinct from the augmentation of morbid tendencies common to both parents.

"The evidence convinces me that it is a great law of nature that all organic beings profit from an occasional cross with individuals not closely related to them in blood, and that, on the other hand, long-continued close interbreeding is injurious."

Pages on pages, in addition to what I have copied, are found in Darwin's works on the evils of inbreeding and the vigor that follows outbreeding. Am always glad to give a rap to the vile practice on incest when I can and have done so for sixty years. Not pretending to possess unusually fine sympathies, I have in consequence of happening to know about a neighbor's family, had a great antipathy to the practice in question.

Briefly, will say that father and mother in family mentioned were first cousins. Numerous branches of the family

good effects which almost invariably follow a cross are from the first manifest. \* \* \* In relation to the subject of domestication, the whole question is of some importance, as too close interbreeding interferes with the improvement of old races, and especially with the formation of new ones. It is important as directly bearing on hybridism, and perhaps on the extinction of species, when any form has become so rare that only a few individuals remain within a confined area. It bears in an important manner on the influence of free intercrossing, in obliterating individual differences and thus giving uniformity of character to the individuals of the same race or species; for if additional vigor and fertility be thus gained the crossed offspring will multiply and prevail, and the ultimate result will be far greater than otherwise would have been the case. Lastly, the question is of high interest as bearing on mankind.

"There is no difficulty in defining what is meant by a cross, but this is by no means easy in regard to 'breeding in and in' or 'too close interbreeding,' because different species of animals are differently affected by the same degree of interbreeding. The pairing of a father and daughter, or mother and son, or brothers and sisters, if carried on during several generations, is the closest possible form of interbreeding. But some good judges, for instance, Sir J. Sebright, believe that the pairing of a brother and sister is closer than that of parents and children, for when the father is matched with his daughter he crosses, as is said, with only half his own blood. The consequences of close interbreeding carried on for too long a time are loss of size, constitutional vigor and fertility, sometimes accompanied by a tendency to malformation. Manifest evil does not usually follow from pairing the nearest relations for two, three, or even four generations, but several causes interfere with our detecting the evil, such as the deteriorations being very gradual

on both sides of the house for generations were well known to be very even, well balanced and normal. Six children resulted from the union, none strictly non compos mentis, but such an odd lot! Odd as "Dick's hatband." Their ways of thinking and acting could never be predicted or accounted for either, excepting that it became generally understood that they were essentially and completely warped and twisted mentally. Physically they looked all right, excepting a peculiar, uncanny appearance of the eyes.

There is not a point of the thousand in the whole book of the Standard of Perfection that I would secure at the price of lowered vitality of birds subject to man's dominion. Good heavens! Is not nature enough streaked all through and

blackened all over in spots with imperfections and sufferings, and always will be, inevitably, without man deliberately adding to their numbers?

Now for the appreciation of what Darwin and a host of other naturalists of the highest rank say about the good effects of crossing. The union of unrelated stock means that just one inconceivably minute cell joins to one other inconceivably minute cell, and, wonderful to relate, those minute objects in some manner never to be explained, feel as if by electric shock the thrill and vigor of non-relationship, something as powerful and unexplicable as the "loves and hates of atoms" and in process of time their descendants feel the same impetus and become more fertile than they would have

been if the two first cells had not been of diverse stock.

Now, the increased fecundity started by breeding, did it not? The breeding was accomplished by two cell-units, was it not? One cell cannot breed alone. Were there not two factors?

If from one of the factors increased fecundity descended generation after generation, did it not also descend from the other? If so, the increased fecundity descends from the female line as well as from the male line. The male cell alone was powerless. It was the actual breeding that caused the heredity of the increased fertility. The female cell bred as truly as the male.

(Continued next month.)

## The New Blue Orpington

An Attractive Variety Seeking to Win Public Favor

*By Captain Max de Bathe, Hartley Court, Reading, England*

**T**HAT THE BLUE Orpington should become popular is only natural, considering what a craze there is for anything blue in the feathered world. The White, Buff and Black have often been admired, but as soon as the Blue came on the scene there seemed no eyes for anything else. Even those who have never kept fowls stopped in amazement at the display pen of Blue Orpingtons exhibited at the last Madison Square Garden Show. Although many not interested hitherto in the breeding of poultry, almost everyone stopped to admire these birds.

Their beautiful, medium slaty blue color with each feather laced with two shades darker, the blocky, short-legged true Orpington type, made the other varieties fade away before this wondrous new bird.

It must be borne in mind that in any color there are some birds which do not come up to standard, and of course every

both sexes up to the present time have come from the one pen.

We have at last succeeded in getting the variety to breed true, and there is a wide field for the novice, or anyone else, to start in with this breed, but only reliable stock should be purchased from reliable breeders. Purchase the best blood and it is certain you will be able to produce the best in the variety. The tendency to try something because it is cheap is responsible for many failures, and it is largely on this

WHITE WYANDOTTE COCK.

Winner at both Madison Square Garden and Chicago. Owned by H. N. Hanchett. Mr. Hanchett (formerly of Jackson, Mich.) is now located at Vineyard Haven, Mass., where he has taken up the breeding of this variety in dead earnest. He is aiming to combine the fancy and the utility to a degree not attained heretofore. His birds are exceptional egg producers and as to their prize winning quality his winning at last Madison Square Garden show in class of 260 birds speaks for itself. "Egg machines in fine feathers" is what he calls them.

account that many people give up a breed after one season's breeding because of unsatisfactory results.

The Blue Orpington, like the White, lays a nice brown-shelled egg,—and keeps on laying them. The chicks are easy to rear in any country.

There has been much talk as to what the color of the Blue Orpington should be and to describe it is not an easy matter. Perhaps it would be as well to give the Standard as laid down in England and accepted by the English Poultry Club as the official one:

"Beak, blue. Eye, black or dark brown, black preferred. Comb, wattles, face and lobe, red. Legs, black or blue. Toe nails, white. Plumage of cock: neck, saddle, hackles, wing bow, back and tail, dark slaty blue. Remainder of plumage, medium slaty blue; each feather to show lacing of the darker shade as in back.

"Red Jacket," first and champion cockerel, Buffalo, 1912. First cock, Buffalo, 1913. Bred and owned by C. E. Riley, 431 Fargo Ave., Buffalo, N. Y.

Blue Orpington that is hatched does not come out a prize winner. But for all that, almost all the stock can be remated to produce the ideal Blue Orpingtons.

The economic qualities of the Blue variety equal those of the Buff or White and most certainly surpass the Black, as they have those essential qualities, wide front and beautiful rounded chest so much admired in all Orpingtons. As layers there is no Orpington to beat them.

Another great advantage in this variety is, there is no necessity for double matings. The best birds exhibited of

"Plumage of hen: medium slaty blue, laced with darker shade all through except head and neck; these a dark slaty blue.

"General characteristics of the cock: head, small, neat and carried erect. Beak: strong and nicely curved. Eye: bold, bright and intelligent. Comb: single, fairly small, erect, evenly serrated and free from side sprigs. Ear lobes: small. Wattles: medium length and well rounded. Neck: nicely curved, compact with full hackle.

"Body: Breast: broad, deep and full (not flat), with long, straight breast bone. Back: short and broad. Saddle: rising

accomplished. It is important to have a solid ground color of blue. By mating two light-colored birds you will get much too light a ground color. My experience has been always to select a cock on the dark side, one perhaps that in the show pen some might think too dark. You will find, however, with medium colored hens mated to such a cock, the color in the offspring will come just about the shade the Standard requires. If you have light-colored hens mate them with a cock whose plumage is of a darker shade.

It must be borne in mind that the Black Orpington played a prominent part in the production of the Blue Orpington. Those who have successfully bred Blue Andalusians should have no difficulty in mating up their Blue Orpington pens to produce the color in plumage required by the Standard, the color and lacing being identical in the two varieties.

I guarantee that a really good pen of Blue Orpingtons, purchased from a reputable breeder and correctly mated, will produce as many exhibition birds as the best pen of Buffs in the world. I could go further and say that I could go to a show, buy the winning Blue cockerel and the two winning pullets, also the winning Buff cockerel and the two winning

slightly with full, flowing hackle. Wings: nicely formed and carried close. Skin and flesh: white, fine in texture and firm. Tail: short and compact, flowing and inclined backwards.

"Legs and feet: thighs and shanks short and well set apart. Toes: four in number and well spread.

"General shape and carriage: cobby and compact, erect and graceful.

"Size and weight: large frame, 10 pounds to 14 pounds when fully matured.

"General characteristics of hen: head, neck, body, legs, feet, skin and flesh corresponding with cock.

"Tail: neat, small and inclined backwards with a gentle rise.

"Size and weight: large frame, 7½ pounds to 10½ pounds.

"Serious defects: any feather or fluff on legs. Long legs. Any yellow on legs and feet. More than four toes. Side spikes on comb. More than one-third white in lobe. Any deformity.

"Value of points in Blue Orpington:

Defects in condition.....	10
Defects in color and plumage.....	25
Defects in head.....	10
Defects in want of shape.....	25
Defects in want of size.....	20
Defects in legs and feet.....	10

A perfect bird to count.....100"

What one has to aim for is to get a medium color, the body of the feather to be free from smuttiness, and the lacing to be sharp and distinct. This lacing throughout is not an easy thing to achieve, but with careful mating it will soon be

pullets of that variety, and produce as many and probably more winning birds from the Blue pen than from the Buff.

There is a tendency among some breeders, when they see a new variety which threatens to rival or surpass their own specialty, to decry it and say it will not breed true, etc. This cannot be truthfully said of the Blue Orpington. It has been demonstrated that they do breed true if bred from reliable stock.

The judging at the Crystal Palace, London, 1912, of Blue Orpingtons, I regret to say, was not what it should have been; whether it was the fault of the light or the influence of the judge, it is hard to say, but some of the winning cockerels were nearly black, with a beetle green lacing and purple tails. Some of the winning pullets were more like Cochins than Orpingtons. But withal the Blue Orpington has come to stay. It has caught on with the public quicker than any variety that has been produced within the last thirty years, and it is only a matter of a very short time before it will be the most sought after Orpington bred today.

# Likes The American Orpingtons

An Interview With Captain Max de Bathe of England, Blue Orpington Originator  
By Earle William Gage

CAPTAIN MAX DE BATHE, of Hartley Court, Reading, England, is one of if not the leading poultry fancier in England, and several new breeds are directly due to the results of his various experiments and long and faithful hours of study in this, his chosen field of poultry endeavor.

The Captain has achieved his greatest success with the Orpington fowl, and the blue of that breed is the latest result of his years of study, and proved one of the most popular at the recent show at Madison Square Garden, at which place he exhibited a number of excellent specimens of the breed.

He is a most genial fellow to meet, though he clearly shows one that he is a son of Old Johnny, and that he has a pretty good opinion of his opinion. He talks slow, marking each sentence with thought and careful preparation previous to its utterance. He is full to the brim with good ideas regarding the Orpington, and these facts should be better known to the American fancier of this breed, no matter what the color or type of the fowl.

In his interview he brought out a number of facts which are unknown to a number of the more advanced American

and possesses the power of physical proportions to withstand the extreme cold of Alaska and Siberia. It matters not what country you may desire to go to, you will be quite sure to find one of the varieties of the Orpington there to await your call, and they will be turning out eggs and making goodly bank accounts for the owners, either as prize fowls upon the exhibition tables or as layers and producers of eggs. There are a number of varieties of this fowl—the Buff, White, Black, Blue, Jubilee, Spangled, Cuckoo and one, about to be brought out this year, known as the Pile.

"The first four are very popular upon American soil, and enormous strides have been made here by the importation of

a high-class stock from the fanciers' plants in England in their exhibition type and economic qualities. The American bird is very beautiful to look upon and has been able to place itself far in advance of other fowls, especially with the beginner and small capetailed fancier, due to its pretty lines and hefty body. The head of the American Orpington is particularly beautiful.

"It is to be regretted that in England sufficient attention is not paid to head points. Provided a bird is perfect in shape and type his head is never marked against his winning powers, provided there be nothing of a disqualifying nature about it.

"In America, on the other hand, the fanciers have used greater care as regards the habit of spoiling the economic qualities of the Orpington by breeding to get birds with abnormally short legs and backs, though many people seem to believe a bird cannot have too short legs or back. This is very wrong, and the impression should never be allowed to long remain in the minds of the younger set of fanciers.

"An Orpington with too short a thigh spoils his outline. The Orpingtons as bred here in America are a great credit to their breeders, and in no place in the civilized world will you be able to locate a finer collection of birds than in the Madison Square Garden Show.

"Inasmuch as I have attended the greater shows for the past few years which have been held in the world, being fully familiar with all of the fanciers and their fowls, both as regards form and vitality, I feel that I am fully capable to

followers. He says: "In spite of the introduction of new varieties of fowl, the Orpington is yet the most sought after, and is quite likely to be, chiefly for the single reason of its being a thoroughly all-round, general purpose chicken, combining the two most desired factors to the fancier, a fowl with bulky body, making the excellent "meat" fowl, and the good layer as well. There are a number of the fowls, indeed, a vast majority, do better in one climate than in another. This is not true of the Orpington, which will do just as well in Australia as in America, and the Canadians will get as good results from this breed as the Mexicans. The Orpington is capable of enduring the most intense heat

attest to the quality of the American Orpington as she stands today, the finest bird of her type upon the world, the queen of the feathered flock and the desired prize of the great owners of fowls everywhere. I have attended the various international poultry shows held at the centers of traffic and transportation of France, Belgium, Italy, Germany, Holland and America, and I cannot recall ever seeing a better showing than I saw this year in New York. The types seemed to have risen from their former standards and stand now in the height of their glory and crowning effects. The various fowls that I have seen here will give me a most appreciative message to take back to the English fanciers, who are most eager to possess the latest knowledge regarding the newer and the better Orpington which America has made possible.

"A great deal has been written regarding the Buff, Black and White varieties, but the most talked of today is the Blue, principally due to its freshness and bright color. This type of fowls was first introduced here last year, and at Madison Square Garden I gave the Americans their first opportunity to see the newer attainment in originalness in culture of newer strains. Last season there were eight entries under this head, and the figure was multiplied by four, making 32 for this season's showing, and I shall be

greatly surprised if this number does not pass the hundred mark for the next show.

"I am very sure that no breed has made the wonderful showing this blue strain has in the short period it has been in existence, for it has caught on quickly, and gives great satisfaction to all followers. Those of America who possess the strain speak very highly of them and have made open and frank testimony regarding their extraordinary laying qualities and of their easiness to rear in all climates. Of a beautiful shade of medium slaty blue, each feather with a lacing of a deeper shade, they possess a type equal to that of the black.

"As broilers they cannot be beaten, and I desire to predict that within a very short space of time they will be the most popular breed in America and command for exhibition the highest prices ever attained by any fowl.

"The American has always struck me in a peculiar manner as regards his methods of exhibition. The exhibitions always look up to the minute, although many of the birds are obliged to travel long miles to the Garden. This must be a knack which the American has of 'delivering the goods,' but the express companies must be better than the method of delivery with which we Englishmen are obliged to tolerate."

## February's Record in National Contest

The Pen of Single Comb White Leghorns from England Are Still in First Place and 115 Eggs in the Lead of Their Nearest Competitor

THE hens in the Egg Contest at the Missouri State Poultry Experiment Station at Mountain Grove, are still doing considerably better than they did in the first contest. They laid 2,224 more eggs this month than during February of last year. The grand total for the first three and a half months has now reached 21,636 eggs, 8,666 of these being laid in February. Pen No. 2 S. C. White Leghorns, from England, are 115 eggs in the lead of their nearest competitor. The contest is on in earnest now and some hens which had not laid much up to this time are now laying

regularly and are climbing up toward first place. Every month from this on there is certain to be many changes. Pen No. 56, White Orpingtons from Kentucky, won the silver cup for the best record for February, by laying 195 eggs in the 28 days.

The standing of ten leading pens for the first three and a half months, including the last 15 days of November, and all of December, January and February, is as follows:

	Eggs.
Pen No. 2—S. C. White Leghorns, England.....	656
Pen No. 23—Silver Wyandottes, Illinois.....	541
Pen No. 19—Silver Wyandottes, Iowa.....	518
Pen No. 57—Black Langshans, Missouri.....	488
Pen No. 33—Barred Plymouth Rocks, Illinois.....	477
Pen No. 20—White Wyandottes, Arkansas.....	474
Pen No. 59—Black Orpingtons, Canada.....	469
Pen No. 30—Buff Wyandottes, Vermont.....	443
Pen No. 24—White Wyandottes, New Jersey.....	438
Pen No. 58—Buff Orpingtons, Missouri.....	433

A pen of S. C. Rhode Island Reds from Florida is only one egg behind the last mentioned pen.

The ten best pen records for the month of February are as follows:

	Eggs.
Pen No. 56—White Orpingtons, Kentucky.....	195
Pen No. 2—S. C. White Leghorns, England.....	180
Pen No. 49—Black Langshans, Missouri.....	180
Pen No. 19—Silver Wyandottes, Iowa.....	178
Pen No. 57—Black Langshans, Missouri.....	175
Pen No. 27—Silver Wyandottes, Missouri.....	165
Pen No. 33—Barred Plymouth Rocks, Illinois.....	163
Pen No. 20—White Wyandottes, Arkansas.....	161
Pen No. 37—S. C. Reds, Missouri.....	161
Pen No. 30—Buff Wyandottes, Vermont.....	159

Black Orpington, No. 2,052, in pen 59, laid 27 eggs in 28 days. Seventy-eight hens out of the seven hundred have not laid an egg. A few contestants have made the mistake of sending old hens. Others did not have their stock mature enough. To make a good record in a contest like this, the stock should be hatched early and fully matured by the

time the contest begins. The best individual hen records to date are as follows:

	Eggs.
Hen No. 66—S. C. White Leghorn, England.....	84
Hen No. 68—S. C. White Leghorn, England.....	82
Hen No. 2076—Buff Orpington, Missouri.....	81
Hen No. 600—Buff Wyandotte, Missouri.....	79
Hen No. 65—S. C. White Leghorn, England.....	79
Hen No. 860—Buff Wyandotte, Vermont.....	79
Hen No. 709—Buff Plymouth Rock, Missouri.....	78
Hen No. 735—Black Langshan, Missouri.....	78
Hen No. 656—White Wyandotte, Arkansas.....	77
Hen No. 601—Silver Wyandotte, Iowa.....	77
Hen No. 2158—Buff Orpington, Missouri.....	77

### Results From Feeding Tests.

In this feeding experiment, the positions of the ten pens remain the same with the exception that the pen fed according to the New York method of feeding laying hens has advanced from ninth to seventh place. Where feed of all kinds is kept before the hens, they seem to be doing best and laying the greatest number of eggs. The pen in which the hens feed themselves from hoppers and in which feed of various kinds are kept before them are 42 eggs in the lead of their next competitor, the pen fed according to the Canadian method of feeding. So far, this experiment indicates that hens will lay more eggs in the winter months where they are hopper fed, or fed from an automatic feeder than where they are hand fed. The results for the summer months may prove the opposite to be true for hot weather.

### Pen No. 63, Maine Method of Feeding Laying Hens.

Dry grain fed in litter.

Early morning feed—Cracked corn.

10:30 a. m., feed equal parts of wheat and oats.

Feed about two quarts to fifty fowls.

### Dry Mash—First Month.

300 bu. wheat bran.

100 bu. corn meal.

100 bu. cheap flour.

100 bu. beef scraps.

### Dry Mash—Second Month.

200 bu. wheat bran.

100 bu. corn meal.

100 bu. cheap flour.

100 bu. gluten feed.

100 bu. meat scraps.

Third month, same as second, only add 50 bu. linseed meal.

Fourth month, same as second.

Fifth month, same as third.

After this, feed same as second month and add 50 bu. linseed meal every alternate month.

Green food, sprouted oats, cabbage, mangels, etc. Grit, shell and charcoal.

### Hints on Feeding Baby Chicks.

The hatching season is on and it might be well to give

a few suggestions as to how to feed or start baby chickens.

The first two or three weeks of a chicken's life is perhaps the most critical time in its history. If you can get them safely over this period, then your problem is nearly solved. Then any feed which will give best results, which will tend to decrease the mortality, is not expensive even if you have to buy it and pay a good price. You cannot afford to let anything stand in the way of providing the best feed obtainable to feed your chicks for at least the first three weeks after hatching. We have found that practically every farmer and poultry raiser has a little different method of feeding. If you are getting good results, I should not advise you to change it. While the method mentioned here is perhaps not the best, yet it has proven to be simple and safe in most cases.

Provide a hover for the hen and chickens, or a comfortable brooder for the incubator hatched chicks. Cover the floor with clover chaff or fine cut straw or other litter free from mold or mustiness. Sprinkle a little fine grit over the floor and provide a fountain of pure water. Place the chicks in the brooder but do not feed them for about forty-eight to seventy-two hours after they are hatched. The first food we give them is a little good grade commercial chick feed which is sprinkled in a clean place on the floor. This is fed at morning, noon and night. As soon as they have learned to eat, we sprinkle this feed in the litter and let them have the fun of scratching for it. Between meals,

about ten o'clock in the morning and about 2:30 in the afternoon, we sprinkle a little rolled oats or pinhead or steel cut oats on the floor. We provide all the sour milk or buttermilk we can get the chicks to drink from the first day until the stock is fully matured. We prefer this to feeding them beef scraps. We also cut up an onion occasionally and give to the youngsters. This furnishes them with green food and also seems to aid in keeping them healthy. After the chicks are about ten days old, we begin to feed a dry mash mixture made as follows:

2 parts bran.  
1 part corn meal.  
1 part shorts or middlings.

We mix in a little bone meal and a little fine charcoal and also include one-half pound of fine salt with every one hundred pounds of this dry mash. This is kept in a hopper or box where the chickens can eat it any time they become hungry. The same dry mash is used until the chickens have fully matured. If you cannot get sour milk or buttermilk, it will be necessary to add one-half part of dry beef scraps to the dry mash mixture. After the chicks are from two to three weeks old, we gradually change their grain food from the commercial chick food to a mixture of two parts wheat and one part cracked corn or kaffir corn. After the chicks are a month old, their grain food is all fed from hoppers. Try this method of feeding if you wish, but don't give up your own if you are already succeeding with it.

## An Open-Air Incubator

Practical Natural Incubator That Will Hold 150 Eggs—Requires Attention Only a Few Minutes Each Day

By Prince T. Woods, M. D.

WOULD YOU LIKE to build an open-air incubator, one that can be run out of doors from the middle of March until late in the fall, one that costs only about \$1.50 per 150-egg capacity, labor included, one that hatches by the natural method and will hatch every hatchable egg that a good sitter can hatch? If so, build and try a Wozelma Open-air Natural Incubator, ten-hen capacity.

You can easily build one from waste lumber, a little wire netting and roofing fabric, by following dimensions here given and using the illustrations from photographs for a guide. Ours holds 150 eggs, fifteen under each hen, ten compartments, a sitting hen in each compartment.

It cost about 75 cents for material and less than two hours labor.

"Only an outdoor nest for sitters?" you say. True, but it is

front, rear and at ends. The greatest overhang, 3 inches, is in front. The roof hinges to front and hooks at back. The front has a 4-inch spruce strip at top and bottom, between these strips the doors being hung. The doors are made to cover front of five nests each and are made of  $\frac{3}{4}$ x2-inch frame stuff and are hinged to front at top. Ends are solid board. Board partitions, nine in number, are so placed as to give ten nests 14x14 inches each.

This natural incubator is placed out of doors in any sheltered spot where the water will drain from it. The one described is located in an open space among the pines; the wire bottom rests on a bed of moist earth and pine needles just as nature placed them. The nesting material used is pine needles, used because there are plenty at hand ready to use. Any good nesting material would do as well. The nest has no protection of any kind except that shown in the illustrations and a wire enclosed yard built around the incubator. Ten hens are set at one time and are given fifteen eggs each. When the hatch comes off five hens get the

Fig. 1—Front view of Wozelma Open-air Natural Incubator with doors closed. (Photo by Dr. Woods.)

Fig. 2—Front view of Wozelma Open-air Natural Incubator with doors open showing partitions, separate nests and the hens on the nests. (Photo by Dr. Woods.)

a good one and will help you to get 15 chicks from 15 eggs as often as it can be done.

The Wozelma open-air natural incubator is 12½ feet long by 16 inches wide. It is 16 inches high in front and 12 inches high in rear. The rear wall, ends and partitions, are solid board. The bottom is of 1-inch mesh poultry netting only. The roof is made of  $\frac{3}{4}$ x4-inch spruce for frame and is covered with heavy, smooth roofing fabric. This roof is made 19 inches wide by 13 feet long to give overhang in

chicks and the others are reset or returned to the laying houses; so every hatch furnishes its own brooders.

The actual care required for sitters so handled is very little, a few minutes morning and night, much less than a 150-egg lamp-heated incubator. Of course it incubates in the natural manner, hen heat, self-regulating, self-ventilating, self-adjusting, and almost self-operating. In the morning the attendant carries feed and water and places it in the yard in which the natural incubator is located, then he opens the

front doors of the nests; at night rounds he closes up the nests again, and the hens do the rest and do it well. Much better hatches are had when hens have outdoor nests of this sort. It will yield better chicks, bigger chicks, and more livable chicks than can be hatched indoors. This spring we have had mostly cold, wet weather, but the outdoor open-air incubator gives fine hatches of big, strong, sturdy chicks that live and thrive. Try it and be convinced. It costs little and saves much. Sitting hens handled in this manner give

Fig. 3—End view of Wozelma Open-air Natural Incubator with one door open and one closed. (Photo by Dr. Woods.)

less trouble and require less care than when set in any other way. Ours give no trouble at all.

Fig. 1 is from a photograph by the writer, showing the front view of the Wozelma open-air natural incubator. The doors are shown closed and detail of doors, hinges, etc., are clearly shown.

Fig. 2 shows the incubator with both doors open, and the partitions, separate nests and the sitters are clearly shown.

This is how the incubator looks when opened for the day at morning rounds.

Fig. 3 presents a view of the east end of the incubator, with one front door open and one closed. Bear in mind that this incubator sits on the ground. It has no bottom except fine mesh poultry netting designed to keep rats and mice out of the nests. The nests are therefore practically on the

ground, just where nature intended hens to nest and hatch their young.

Fig. 4 is a rear view of the incubator at east end, with roof detail. Always place this incubator with the front south. See that it is located on a well drained piece of ground and then don't worry about it. Heavy rains, spring snows and winds don't do a bit of harm. The open-air natural incubator is right on the job and doing business all the time, and sitting hens take to it as readily as a duck takes to water. We feel some enthusiasm about it, because to date it is outhatching even hens that steal their nests.
